# MINDMANAGER FOR MAC

---

## Version 10.3

This MindManager for Mac release now supports OS X v10.10 Yosemite. The release no longer supports Snow Leopard (Mac OS X v10.6). Mindjet's online Projects have been renamed as Task Lists.

## Version 10.3.635

**Issue:** MindManager crashes exporting to Microsoft Word or Page.

**Resolution:** Exports are successful.

**Issue:** Export to SWF file fails on Yosemite (Mac OS X 10.10).

**Resolution:** SWF export is successful.

**Issue:** Export error stating Java needs to be installed when attempting export to Page and Word.

**Resolution:** No error appears and export is successful.

**Issue:** MindManager crashes on sharing a file when using Yosemite.

**Resolution:** Share is successful.

**Issue:** Export fails if there is more than one period in the file name (e.g. "Test.Map.MMAP")

**Resolution:** Export is successful.

## Version 10.3.606

**Issue:** MindManager crashes when entering a license key after a trial expires.

**Resolution:** No crash.

**Issue:** "Send via Messages" does not work on OS X v10.9 Mavericks

**Resolution:** Disabled the iChat.app/Messages.app support for Mac OS X v10.9 & later. Apple specifically deprecated the "instant message" component of the Messages.app in Mac OS X v10.9, so this behavior will not be available on newer versions of Mac OS X.

**Issue:** MindManager throws an exception and hangs when sending a topic with a "%" in its name to Mindjet Tasks online service.

**Resolution:** Mindjet Task created without an error.

**Issue:** Delete File is available during multi-select even though a map is checked out.

**Resolution:** The option to delete files is not available when multi-selection contains checked out maps.

**Issue:** Long project names are not displayed correctly in the Inspector/Markers pane.

**Resolution:** Project names are now truncated with an ellipsis (...) at the end if they're too long to fit in the inspector.

**Issue:** Error occurs when launching MindManager using links to online content.

**Resolution:** MindManager opens without an error and displays the proper file, folder, or topic.

**Issue:** A relative Hyperlink to a topic of another map does not work after renaming the folder.

**Resolution:** Hyperlink works as expected.

**Issue:** Setting margins for printing does not work.

**Resolution:** Margins update correctly.
