New in MindManager 2020

**Co-Editing**
Now you can experience the power of live collaboration using Co-Editing in MindManager. Invite colleagues across departments, offices and time zones to work together in maps in real time – no license is required to join a Co-Editing session – and watch plans crystallize, opportunities appear, and ideas take flight right before your eyes.

**MindManager Snap**
Using MindManager Snap, you can capture map-worthy content in seconds when you’re away from MindManager, then drop it into your maps the next time you open it up.

**Microsoft Excel integration**
New integrations give you more control than ever before over the way you visualize, adapt, create and present Microsoft Excel data within and from MindManager. Quickly and precisely categorize, comprehend and analyze Excel data imported into MindManager maps with the new Excel Data Mapper tool. Also, easily customize spreadsheet structure, organization, style and more when exporting MindManager map content to Excel.

**Enhanced project management**
Gantt Pro helps get a better understanding of your projects, and new project costing features deliver instant visibility into one of your project’s most critical elements.

**Content Control**
Content Control lets MindManager Enterprise clients share the responsibility of keeping project and planning maps updated, while maintaining control over what elements can be changed and who can change them.
Welcome to MindManager

**Enhanced Gantt charts**

Expanded Gantt chart functionality gives more power and flexibility, so you can get a better understanding of your projects.

**Enhanced flowcharting**

Flowcharting enhancements enable you to quickly build visual process flows that bring shape and clarity to even highly complex process, are easy for others to understand and follow, and are easily adapted as needs change.

**Compatibility with earlier versions**

MindManager can read maps from MindManager X5 through MindManager 19.1 without any changes to the maps.

No special procedure is needed to open maps from these earlier versions, but if you used any custom add-ins from third-party vendors on your maps, you will need to get updated versions of these to use.

**Getting started with MindManager**

MindManager lets you capture ideas and information visually, organize them and then create an action plan. You can analyze a problem, brainstorm a solution or plan a complex project.

Starting with Version 17.0, the MindManager online features Mindjet Files and Tasks are no longer offered. New customers need a license key to enable MindManager features past the trial period. Your key determines whether MindManager is running the Enterprise features or not. Without a license key, MindManager can still run in Viewer mode.

**NOTE:** If you already own a Mindjet account, you can still sign in to your account to use MindManager.

**Entering Your MindManager license key**

When you purchase MindManager 2020 or have it installed by your Administrator, you receive a license key that determines whether your installation runs Enterprise features or not. You can enter this key at any time:

- during installation
- during or after the trial period
- while using MindManager in Viewer mode
- after logging in to your Mindjet account (legacy account owners only)
To enter your license key when MindManager is starting up:

On the **Welcome** dialog, click **Enter License Key...**  
OR  
Click **Continue**, and follow the instructions below.

To enter your license key when MindManager is open, or to add it to your existing online account:

On the **Help** tab, click **License Key**.  
OR  
On the **File** tab, click **Help**, then click the **License Key** button.

**NOTE:** When you sign in to an existing Mindjet account, MindManager remains logged into your account until you sign out; there is no need to sign in each time you want to use MindManager.

**Viewer mode**

If you open MindManager after your trial period has expired, or if you choose **Use as Viewer** on the Welcome dialog when you start MindManager, the application runs in a reduced functionality or "Viewer" mode. MindManager Viewer allows you to view, but not edit, files that MindManager users share with you. All map features are intact: you still have access to attached documents, links, images, tasks, tags, and labels; and can interact with them using most current viewing options and search functions. Moreover, switching to MindManager Viewer does not affect existing files or maps.

**NOTE:** At any time, you can use your MindManager Viewer installation to upgrade to a full version. The **Buy Now** and **Enter License Key...** commands are always available from the Welcome dialog, File tab, and Help tab to let you activate MindManager.

**Interactive Tour of MindManager**

To learn more about using MindManager, take the interactive tour by doing **one** of the following.

On the **Help** tab, click **MindManager Help**, then select **Tutorial**.  
OR  
On the **File** tab, click **Help**, click **MindManager Help**, then select **Tutorial**.

**Having problems?**

For troubleshooting information, visit the Support section of the [MindManager website](#).
Use MindManager Viewer

MindManager users can now share maps, flowcharts, and timelines with colleagues who are not MindManager users. Recipients can view the file (*but not edit it*), including all map features: attached documents, links, images, tasks, tags, and labels.

MindManager Viewer users can access many of MindManager’s viewing features from the View and Task tabs, display the Map Index from the Home and Insert tabs, and search in a map from the Search task pane.

Enable the Viewer mode

MindManager Viewer is a limited configuration of MindManager which runs without a license key. To enable the Viewer mode, you only have to install the universal version of MindManager, and choose to use it as a Viewer at any time:

**During the 30-day trial period**

1. When MindManager starts, the Welcome dialog displays.
2. Click the **Use as Viewer** button located between **Enter License Key**… and **Continue**.
3. MindManager exits and reopens as MindManager Viewer.

**After the trial has expired**

The mention "MindManager Viewer, all maps will open read-only" displays at the bottom of the splash screen, just above the Buy Now button.

Click **Continue** to use MindManager as a Viewer.

**NOTE:** You can always use your MindManager Viewer installation to upgrade to the full version of MindManager. Every time you start MindManager Viewer, you may click **Buy Now** to purchase a license, and **Enter License Key**… to activate MindManager or MindManager Enterprise.
I just opened a MindManager file in MindManager Viewer! What can I do now?

**NOTE:** Using MindManager Viewer does not allow you to edit the MindManager file and certain MindManager features will not be available to you.

With MindManager Viewer, you can:
- View maps and flowcharts, including attached documents, links, images, tags, and labels in three views: Map view, Outline view, Linked Maps view, and as a Gantt chart.
- Create, manage, and print a set of slides for a map, and view in Slides View.
- Use Walk Through view when presenting maps.
- Filter map topics to focus in on a subset of the map.
- Collapse and expand the map's topics for easier viewing, or zoom in to view content in detail.
- View the Map Index.
- Search for text strings in map topics.

The Viewer's Quick Access Toolbar includes Open, Print, and Help.

The File menu includes Help, About MindManager Viewer, and information about starting a trial version of the full version of MindManager.

---

How do I share a map for MindManager Viewer?

First, save the map. Then ...

- Send it using MindManager's send using email features.
- Send it via email.
- Save it to a network drive, shared cloud storage, including Box, DropBox, Google Drive or OneDrive, or SharePoint site.
- Or use any other way that you usually share a file.

That's all there is to it!

**NOTE:** Recipients will only be able to open maps using MindManager Viewer if they have MindManager installed.
Welcome to MindManager

MindManager interface and ribbons

The Interface

The MindManager mapping window is where you create and edit maps. This window opens when you start MindManager. MindManager also offers several other views for working with your maps.

What do you want to do?

- Customize the ribbon
- Customize the Quick Access Tool Bar
- Learn more about viewing options

MINDJET ONLINE:
You use the Mindjet Files window to access your online content and sharing and collaboration features. Read more about using these features here.
The Ribbons

The Home Tab

The easy-to-use Home tab provides everything you need to get started mapping with MindManager. If you've started by using Flowchart template, the Home tab will change to reflect the new Flowchart options:

NOTE: You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options ([File tab > Options > General]).

The Insert Tab

The Insert tab has all the items you'll frequently want to add to your map. If you're creating a flowchart, the Insert tab will change to reflect Flowchart options:

The Task Tab

The Task tab collects all possible task actions, all in one place.

NOTE: You will only see the Send Tasks to SharePoint and Show Gantt Pro buttons if you are using MindManager Enterprise.

NOTE: You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options ([File tab > Options > General]).
Welcome to MindManager

The Design Tab

Need to change the way the map looks? It's on the Design tab.

The Format Tab

All topic-formatting tools are on the Format tab.

The Advanced Tab

Ready to kick it up a notch? You'll find expanded options on the Advanced tab.

NOTE: You will only see the SharePoint Items Query button if you are using MindManager Enterprise.

The Review Tab

All the review tools you'll need are there on the Review tab.
The View Tab

MindManager offers a variety of ways of viewing maps and map data through the View tab.

**NOTES:** The **Show Gantt Pro** button is only available in MindManager Enterprise, otherwise users will see the **Show Gantt Chart** button.

You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options (File tab > Options > General).

The Help Tab

Need help? Want to take the one-minute tutorial? Looking for keyboard shortcuts? It's all on the Help tab.
The Help system

The MindManager help system is available both online or as a local file.

- When you first install MindManager, it is configured to use the online Help.
  - The online Help file provides the most current Help information available, and includes additional content that is only available online. It also gives you the ability to provide feedback on this Help system directly to MindManager.
- You can choose which version of Help you want to use in MindManager Options. (In environments without Internet access, your administrator may disable this option, and you will use local help by default.)
- If you are usually not connected to the Internet or if you have a very slow connection you should use local Help—this will speed the Help system's response.

The advantages of using online Help

The online Help file provides the most current Help information available, and includes additional content that is only available online. It also gives you the ability to provide feedback on this Help system directly to MindManager.

- If online Help is enabled but is not available (if you are not connected to the Internet) MindManager will attempt to connect, then use the local Help installed on your system.
- If you are usually not connected to the Internet, you can set an option to use local Help.
How to get Help

Click the Help button on the ribbon
Or Press F1. In most dialogs, this will display the related Help topic.
Or On the File tab, in the Help group, click MindManager Help.

Or, use the MindManager Support Center button (above the ribbon) to connect to our support team. Send your question to the Support Center, and the Support Center pane will let you know when you can expect a reply from a Support team member.

How to Use Help

- Use the Help system’s Contents and Search tabs to locate topics of interest.
- When viewing a topic, click the See also links to see other topics that may be helpful to you.
- Keyboard shortcuts are marked with.
- Helpful drop-down hints are marked.
- Important drop-down notes are marked.
- Hints for using Mindjet online features are included. See Online Features Overview for an overview, or consult Collaborating online with Mindjet.

Other resources

Consult the File tab’s Help pane. Under MindManager Help you'll find other resources like an interactive tour of the product, Quick Tips tutorials that show how to use MindManager for specific tasks, and keyboard shortcuts.

If you prefer to use a printed reference, download the MindManager for Windows User Guide here.

The MindManager online Support page is your gateway to a variety of other resources:

- FAQ's
- Training, tutorials and tips
- Product resources
- Knowledge base
- Mindjet profile sign-up
- Maintenance and support plans
- Contact support
Add Content to Maps

What is a map—and how do you use all those topics?

Maps offer a way to aggregate and visualize information and relationships. The basic building-blocks of a map are map topics.

**Create topics** for a summary of commands for adding topics and a selection of shortcuts for adding map content.

A **flowchart** is a specific type of map that describes a process or workflow.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Central topic</td>
<td>The main theme or title of your map. When you create a map, this will be the first Topic created and you will build the map from this one.</td>
</tr>
<tr>
<td>Main topics</td>
<td>The major ideas that make up the theme. Create them by selecting the central topic, then clicking New Subtopic.</td>
</tr>
<tr>
<td>Subtopics</td>
<td>Details about a topic. Create them by selecting a main topic and clicking New Subtopic.</td>
</tr>
<tr>
<td>Callouts</td>
<td>Additional information for a specific topic or relationship. Create them by selecting a topic (but not the central topic) and clicking Callout.</td>
</tr>
<tr>
<td>Floating topics</td>
<td>Auxiliary information or text.</td>
</tr>
<tr>
<td>Selected topics</td>
<td>Selected topics display the blue topic frame and the Quick Add tabs. Grab the frame to move or resize the topic. Click the Quick Add tab to add a new topic.</td>
</tr>
</tbody>
</table>
Creating, Opening, and Closing Maps

Create a new map

The first step in creating a map is to begin a new map. You can either create an empty map to add content from scratch, or you can use a template or an existing map (whole map, or just a portion) as the basis for your new map. You can import a file from another application to create a new map instantly from that content. You can also create a new flowchart.

What do you want to do?

- Create a blank map
- Create a map based on a Map Template
- Create a new map from an existing map
- Create a new map from a branch on an existing map
- Create a new map by importing a file from another application

See also:

- Create topics
- Paste or import content
- Brainstorm
- Create and modify Map Templates

Create a blank map

For a new, blank map, do one of the following in the main MindManager window:

- Double-click on an empty area of the bottom workbook tabs bar.

![New Map]

- On the Quick Access Toolbar, click New.
- Click the File tab, click New Blank Map.
- Press CTRL+N.

MindManager opens a new map based on the New Blank Map template. Each new blank map begins with a central topic, or title. To begin, click on the central topic and enter the theme of your map. Then, go on to create other topics.

You can set an option to open a new map each time MindManager starts using the General options.
Create a new map based on a Map Template

You can create a new map using a Map Template shown in the New Map dialog, or if you are connected to the Internet, you can choose a template from the Online Gallery or from the Maps for That! collection.

1. Do one of the following:
   - On the Quick Access Toolbar, click the New arrow, and then click From Template.
   - Or Click the File tab, and then click New.

   The set of built-in map templates is displayed, organized into sections with titles such as Project Management, Strategic Planning, and Personal Productivity.

2. Browse the built-in map templates under Templates Home:
   - The Blank templates offer basic MindManager templates in several map layouts: org-chart, radial, right-facing, tree, and flowchart.
   - My Templates lists templates you have added using the Add Template button or through the Template Organizer in the Design tab.
   - Click any of the Local Templates categories (Management, Meetings and Events, Personal Productivity, Problem Solving, Project Management, Strategic Planning, and Flowcharts) to see pre-designed template options.
   - In Online Templates, click either Online Gallery or Maps for That!, select a category, and then browse the displayed templates.

3. Do one of the following:
   - Click a template to open up a preview window. Then click Create Map or close by clicking the X at top right.
   - Double-click the desired template to use as a basis for the new map.

To navigate back to the top level of Templates, use the Back button or the template folder breadcrumbs at the top of the page.
Add a Map Template to the set of built-in templates

1. If you don’t see the Template you want to use in the dialog, click the **Add Template** button at top right.
2. Navigate to the location of the Template file you wish to add, and then click **Open**.
3. The Template will appear with the set of built-in templates in the New Map dialog. 

See **Modify a Map Template** for more information on editing Map Templates.

Create a new map from an existing map

To add to or modify an existing map without changing the original, use the Save As command in the **File** tab or the Quick Access Toolbar to save the map under a new name.

Create a new map from a branch on an existing map

You can create a new map from topics on an existing map by using the **Send Topic(s) To** command. You may want to use this feature if:

- You want to duplicate a topic or topics in a new map.
- Your map gets large and you want to "break off" topics to create a separate map. You can link these maps together, and then use the **Linked Maps View** to see previews of all the linked maps and execute a variety of commands on them.

1. Do **one** of the following:
   - Right-click the topic.
   - Or Select several topics and then right-click on one of them.

2. Click **Send Topic(s) To**, and then click **New Linked Map**.
   - If you selected a single topic you can choose whether it will become the central topic or a main topic (branching off a new central topic) on the new map.
   - If you want to remove the topics from the current map, choose the **Delete original topics and create links to exported topics**. The topics will move to the new map and links will be added to the original map that point to the new map.
   - If you want the exported topics to link back to the original map, check **Create links from exported topics to original topics**.

Otherwise, the topics are simply copied to create a new map but the original is left unchanged. (This produces the same result as copying the topics, opening a new map and pasting them.)
Create a new map by importing a file from another application

You can import a file from another application to use its content as the basis for a map. MindManager can open:

- Microsoft Word documents
- Microsoft Excel spreadsheet
- Microsoft Project files
- Microsoft Project Exchange (MPX) files
- OPML documents
- XMind or XMind:ZEN file
- FreeMind

1. On the File tab, click **Import**.
2. Click the type of file you want to import, select the file, and then click **Open**.

See Work with Microsoft Word, Work with Microsoft Project, Import a Microsoft Excel file, Import an MPX file, Import an XMind or XMind:ZEN file, Import a FreeMind file and Import an OPML document for more information on using these files.
Open and close a map

You can open a map for editing to change the original map. To avoid changing the original you can open a copy or open the map as read-only. If you open a map that is password-protected you may be asked to enter a password to open or edit the map.

**MINDJET ONLINE FEATURES**
See Work with Mindjet Files & Tasks for more information on opening maps stored online in Mindjet Files.

**What do you want to do?**

| Open an existing map | Open a map as a copy or open as read-only | Open a password-protected map | Close maps |

**See also:**
Search for maps or documents
Use shortcuts
AutoRecover

**Open an existing map**

1. Do one of the following:
   - On the Quick Access Toolbar, click Open.
   - Click the File tab, then click the name of a Place in the Open pane.
   - Click the File tab, and in the list of Recent files, click the file name to open the map. **READ HINT**
   - You can control the number of recent documents that appear using the General options.
   - Or
     - Press CTRL+O.

2. The standard Windows Open File dialog appears so you can navigate to the map file, and then click Open. (You can open a map from an earlier version. See Compatibility with earlier versions.) **READ HINT**
   - You can double-click on a map (.mmap) file in Windows Explorer to open it.

**Open several maps at once**
You can have multiple maps open in MindManager. (To open several at once, press CTRL as you select their names in the Open File dialog, then click Open.) If you are using Workbook Tabs you'll see a tab for each open map at the top of the map window. (Note that you can choose to see workbook tabs with either the map title or the map file name using the View options.)
Add Content to Maps

If a map is already open, you cannot open a second copy of it, but the **Split map** view allows you to work on one section of the map while viewing a different section. ✓ **READ HINT**

**Hints:**

You can direct MindManager to automatically open an existing map on startup using the General options.

You can set up **shortcuts** to frequently-used maps and folders in the My Maps task pane and open them with a single click.

You can open other file types (Word, Project) to help you create a map quickly. See **Import content** for details.

If you are working on a map with links to other maps, you can open the linked maps from the **Linked Maps View**.

If you want to find a map containing specific content, you can use the **Search Files** option to find it.

*Open a map as a copy or open as read-only*

When you open a copy of a map, MindManager creates a duplicate map with a new name (prefixed by default with Copy (1) of...). Any changes you make are saved to the copy, not the original. When you open a map as read-only, you can view and edit the map but you cannot save it with the same name.

1. Do **one** of the following:
   - On the **Quick Access Toolbar,** click **Open**
   - Click the **File** tab, then click **Browse.**
   - Press **CTRL+O.**

2. The standard Windows Open File dialog appears so you can navigate to the map file.

3. Click the **Open** arrow, and then click **Open as Copy,** or click **Open as Read-Only.**

*Open a password-protected map*

If you open a map that is password protected, you'll be prompted to enter the password. Maps can be assigned two types of passwords:

- A password which allows you to open the map. If you don't know the password you cannot open the map
- A password to modify the map. If you don't know this password you can open the map as Read Only: you can view and modify the map, but you cannot save it with the same name.
The first time you open it a password protected map you are given the option to remember the password. You will not be asked for the password again unless you open the map on a different computer. The Security option lets you clear all remembered passwords.

Close maps

There are several ways to close maps. You will be asked to save changes to any unsaved maps.

To close the current map, do one of the following:

- Click the Close button at the upper-right corner of the map's window.
- Click the File tab, and then click Close.

Close maps from workbook tabs

Right-click the map's workbook tab and click:

- Close to close the current map
- Close Special, and then Close All But This to keep the current map open.
- Close Special, then Close and Delete to close and delete the current map.

You can set an option to warn you if you have maps open when you close MindManager. Before closing, you will be asked to save any new or changed maps. If you do not save them, your changes will be lost.

If you are working on a linked map, you can also close from the Linked Maps View.

Recover unsaved maps

MindManager provides protection from abnormal shutdown (e.g. if the power goes out or your system crashes) by saving AutoRecover information at regular intervals. The AutoRecover feature saves the open maps and the current application state, including the MindManager options and custom Quick Access Toolbar settings.

You can adjust the AutoRecover interval in the Save options.

Open recovered maps

When you re-start MindManager after an abnormal shut-down, MindManager will attempt to recover any unsaved maps open at the time of the shut-down. If MindManager saved AutoRecover information for them you'll see a Map Recovery dialog with a list of these maps. This list will only contain maps that you edited but did not have a chance to save (including new, unsaved maps).

- Select the maps you want to recover, and then click Recover.
MindManager will apply the AutoRecover info that it has saved to the last saved version of the map, and display the recovered version. Recovered maps are given a temporary name (Recovered 1, Recovered 2, etc). You can then save them to save these changes.

- Click **Don't Recover** if you do not want to open any of the recovered maps.

  ![READ NOTE]
  
  If you set your AutoRecover interval too high, you could lose a substantial amount of work. For example if you set the interval to 60 minutes and your system crashes after using MindManager for 59 minutes without saving your maps, no AutoRecover information would be saved and you would lose all your work. The default setting is 10 minutes.

---

**Import a Microsoft Excel file**

The Excel Data Mapper lets you import a Microsoft Excel (XLSX, XLS, or CSV) spreadsheet into a topic in an existing map or create a new map based on the file. This feature simplifies breaking down data in a Microsoft Excel file into categories that are mapped to topics. When you import an Excel file, a topic structure is created where sibling topics are created from rows that share a common ancestor.

**Import an Excel file**

- Do **one** of the following:

  On the **File** tab, click **Import**, and then click **Import using Excel Data Mapper**.  
  OR  
  On the **Advanced** tab, in the **Dashboards** group, click **Excel Data Mapper**.

  - On the **Excel Data Mapper** pane, choose one of the following, and click **Next**:
    - **Selected Topic** to insert the spreadsheet data into the currently selected topic
    - **New Map** to create a new map based on the Excel file
    - Navigate to the Excel file, and click **Open**.
    - To use the default import settings, click **Next** twice and then **Apply**.
    - To customize the data import, you can modify the options in the Excel Data Mapper pane.

  ![READ NOTE]
  
  You can click **Next** and **Back** buttons to scroll between the settings pages.
Save a preset configuration for importing Excel files

1. On the Level page of the **Excel Data Mapper** pane, click the **Save Preset File** button,
2. Type a name for the preset file.
3. Click **Save**.

   The preset file extension is **.mmxp**.

---

Import an MPX file

You can import a selected MPX 4.0 file into either the current map (under the selected topic) or to create a new map, if no map is open.

This feature is disabled by default. To see these options click the **File** tab, click **Options**, and then click **Add-Ins**.

Prepare to import an MPX file

- If you are importing task dependencies as Relationships, and you expect to have many of these on the map, you may want to set the default format of Relationships to a light color and thin lines. You can also do this after import.

**MPX Import**

1. Click the **File** tab, click **Import**, and then click **Import MPX File**.

   ❌ **READ NOTE**

   If you do not see this option, check to see that you have the corresponding add-in installed and enabled.

2. In the dialog, select the MPX file to import.
3. Make your selections in the **MPX Import Settings** dialog. Options

   ❌ **READ NOTE**

   Note that if it is a large file, it may take a while to import.

---

Import an OPML file

You can import an OPML document to create a new map.

❌ **READ NOTE**

Any OPML formatting or features not supported by MindManager will not be recreated in the resulting map.

**OPML Import**
1. Click the **File** tab, click **Import**. and then click **Import OPML Document**.

2. In the dialog, select the OPML document to import.

   **READ NOTE**

   Note that if it is a large file, it may take a while to import.

---

**Import an XMind or XMind:ZEN file**

You can create a new map based on an XMind or XMind: ZEN file. MindManager supports XMind 8 update 7 files and XMind: ZEN files

**Import an XMind file**

1. Click the File tab, click **Import**, and then click **Import XMind File**.

2. In the dialog, select the XMind or XMind: Zen file to import. The XMind or XMind: ZEN map file extension is `.xmind`.

3. Click **Open**.

**Open an XMind file**

1. Click the File tab, click **Open**.

2. Navigate to the folder that contains the XMind or XMind: ZEN file.

3. In the list box next to the File name box, choose **XMind Map File (*.xmind)**.

4. Select the XMind or XMind: ZEN map file.

5. Click **Open**.

---

**Import a FreeMind file**

You can create a new map based on a FreeMind file. MindManager supports file created with the latest official stable release of FreeMind.

**Import a FreeMind file**

1. Click the File tab, click **Import**, and then click **Import FreeMind File**.

2. In the dialog, select the FreeMind to import.

   The XMind or XMind: ZEN map file extension is `.mmind`.

3. Click **Open**.
Open a FreeMind file

1. Click the File tab, click **Open**.
2. Navigate to the folder that contains the FreeMind file.
3. In the list box next to the File name box, choose **FreeMind Map File (*.mm)**.
4. Select the FreeMind **map file**.
5. Click **Open**.
Finding maps and content

Search for maps or documents

The Search feature is particularly helpful for finding a map that contains some specific text.

- Specify the text you want to find, the location(s) to search, and the topic fields to check.
- You can also use this feature to search through a set of linked maps.

When the search is completed, click on a topic in the Search Results window to open the map and jump to the matching topic. You can also display the search results as topics in a map.

**Read Hint**

MindManager makes local map content available to the Windows Search feature and to other desktop search engines. This means you can also search for maps based on their content using these methods.

Open a Recent Map

To open a file you recently worked on:

1. Click the **File** tab, then click **Recent**.

MindManager displays the list of the last few maps that you opened. Click the file name to open the map. You can control the number of recent documents that appear using the **General** options.

Open the Search pane

You enter your Search information from the Search task pane.

To open the Search task pane, do one of the following:

- Click the **Search** task pane tab
- Click the **Task Panes** button **on** the bottom status bar and click **Search** to open the Search task pane.
- **Press** **ALT+CTRL+SHIFT+F**.

**Read Hint**

You can also conduct a search from the top menu bar: Enter the search text in the **Find** box **, and choose your search type from the icon's pull-down menu, or click** **Search** to open the Search task pane.
Search through maps in folders

1. In the Search task pane, under Define Search, enter a word or phrase in the Look for box.

   **Read Hint**

   You can enter a sub-string of the text you want to match. The Search function will show any word that contains this string as a match.

2. Select a location to search, or enter the name of the folder you want to search in the Look in box. Select the Include subfolders checkbox to search subfolders as well.

   **Mindjet Online Features**

   You can search for files in Mindjet Files online by selecting a Mindjet Account from the Look in list.

3. To specify which topic fields to search, click More search options and select the checkboxes for the fields you want to inspect. (By default, only the topic text is searched).

4. Click Search to start the search. To stop the search, press ESC.

5. The Search Results window displays a tree with the map names and topics that are positive matches.

6. To see any matching topic click the topic name in the Search Results window.

   **Read Note**

   If your map is very large, or if you are searching through many maps, the search may take some time. You can click Stop at any time to stop the search.

Search through a set of linked maps

1. Open the main map that links to the other maps

2. Switch to Linked Maps View. You'll see thumbnails of the open map and all the maps it links to.

4. In the Search task pane, under Define Search, enter a word or phrase in the Look for box.

   **Read Hint**

   You can enter a sub-string of the text you want to match. The Search function will show any word that contains this string as a match.

5. By default, only the topic text in maps is searched. To specify which topic fields to search, click More search options and select the checkboxes for the fields you want to inspect.

6. Click Search to start the search. To stop the search, press ESC.

7. The Search Results window displays a tree with the map names and topics that are positive matches.

8. To see any matching topic click the topic name in the Search Results window.
Display Search Results in a map

1. Once you have completed the search, in the Search task pane, click **Send to**.
2. Choose to create a new map, or to add the search results to the selected topic.
3. A new map or topic is created, with the search results as subtopics. Each result topic contains a link to the map and to the topic that contains the search text.
Use shortcuts to maps and folders

The **My Maps** task pane can help you keep your maps organized and gives you quick access to maps and folders. Here, you can set up shortcuts to individual maps and organize them into collections. You may also set up shortcuts to folders. The My Maps pane comes pre-loaded with some default map shortcuts.

You can also pin frequently used maps to the Recent Files list in the Files tab.

---

**MINDJET ONLINE FEATURES**

You can add shortcuts to online maps in Mindjet Files in this pane. See Collaborating with Mindjet for more information.

---

**Open the My Maps task pane**

- Click the **Task Panes** button on the bottom status bar then click **My Maps**.
- Click the **My Maps** task pane tab.

**READ HINT**

You can set an option to automatically open the My Maps task pane on startup.

**Create and manage map shortcuts**

First, you create a collection to hold the shortcuts, and then you create the shortcuts for that collection.

**Create a new collection of map shortcuts**

1. In the **My Maps** task pane, under **Map Shortcuts**, click **Add new collection**.
2. Enter the collection name.

**Add map shortcuts to a collection**

1. In the **My Maps** task pane, under **Map Shortcuts**, click the collection name.
2. Do **one** of the following:

   - **Click Add shortcut to existing map**, select the map in the dialog, then click **Open**.
   - **Open a map and click Add shortcut to current map**.
Move or copy shortcuts

- To move map shortcuts to a different collection click and drag the shortcut (hold down CTRL as you drag to copy the shortcut).

**READ HINT**
You can save a shortcut to the same map in several different collections.

Rename a map shortcut

1. In the **My Maps** task pane, under **Map Shortcuts**, right-click the shortcut and click **Rename**.
2. Enter the new name for the shortcut. (Note that this does not change the name of the map itself.)

Create folder shortcuts

Create a shortcut to a folder

- In the **My Maps** task pane, under **Folder Shortcuts**, click **Add folder shortcut** and navigate to the folder.

**READ NOTE**
If you save a new map in a shortcut folder, the My Maps pane is not automatically updated. Right-click the folder shortcut and click **Refresh** to see a current listing.

Rename a folder shortcut

1. In the **My Maps** task pane, under **Folder Shortcuts**, right-click on the shortcut and click **Rename**.
2. Enter the new name for the shortcut. (Note that this does not change the name of the folder itself.)

Use shortcuts

Open a map using a shortcut

1. Open the **My Maps** task pane.
2. Under **Map Shortcuts** open the collection that contains the shortcut, or under **Folder Shortcuts** open the folder that contains the shortcut.
3. Click the shortcut for the map you want to open.

See properties (size, type and location) of a map or folder shortcut

- Right-click on the shortcut and then click **Properties**.
Repair broken shortcuts

You can set an option to update the shortcuts dynamically. If you move, rename or delete a map all shortcuts to it will be "broken" as indicated by a special icon. If you do not set this option, you will not be informed of the broken shortcut until you click on it. You will have the opportunity to repair it at that time.

This option may slow performance if your shortcuts point to maps on a network drive.

1. Under Map Shortcuts, click the broken shortcut.
2. You can choose to browse for the map to repair the shortcut or you can remove the shortcut from the collection.

Use default collections and shortcuts

- The Map Shortcut collection My Projects is added by default. You can rename or delete this folder.
- The folder shortcut "My Maps" is added. This special folder is created and used by MindManager as the default document folder for opening and saving maps.

Pin frequently-used maps to the Recent Files list

Another way to make frequently-used maps easy to find is to pin them to the Recent Files list.

1. In the Files tab, click Open.
2. Click the name of the map you want to pin, the click the pin icon to the right of the name.

The file will appear in a separate section at the top of the recent files list with the pinned icon to the right. To unpin the map, click the pinned icon.
Adding Map Topics

Create topics

A map can contain several different types of topics. The central topic appears on a new map automatically. You can then use keystrokes and menu commands to quickly add other topics in Map View or Outline View.

The default placement of topics on your map is controlled by the layout settings you choose.

What do you want to do?

- Create topics using keystrokes
- Create topics using the topic frame and Quick Add tabs
- Create topics using menu commands
- Enter topic text

Create topics using keystrokes

<table>
<thead>
<tr>
<th>To create:</th>
<th>Keystroke</th>
<th>Mouse</th>
</tr>
</thead>
<tbody>
<tr>
<td>Central topic</td>
<td>{ added automatically }</td>
<td></td>
</tr>
<tr>
<td>Main topic</td>
<td>ENTER</td>
<td>Double-click the map background</td>
</tr>
<tr>
<td>Topic (sibling)</td>
<td>Select a topic and press ENTER</td>
<td></td>
</tr>
<tr>
<td>Topic before (above) a topic</td>
<td>Select a topic and press SHIFT + ENTER</td>
<td></td>
</tr>
<tr>
<td>Topic as a parent of a topic</td>
<td>Select a topic and press CTRL+ SHIFT + INSERT</td>
<td></td>
</tr>
<tr>
<td>Does not apply to Central Topic</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Subtopic</td>
<td>Select a topic and press INSERT or CTRL+ENTER</td>
<td></td>
</tr>
<tr>
<td>Callout topic</td>
<td>Select a topic and press CTRL+SHIFT+ENTER</td>
<td></td>
</tr>
</tbody>
</table>
Floating topic

Click the map background and type the topic text at the cue arrow.

Or

Double-click the map background and type directly into the floating topic.

You can set options to enable these features.

| Convert a topic to a floating topic | Select a topic, press SHIFT, and drag it to a new location to detach it. |

Create topics using the topic frame's Quick Add tabs

Click the topic, callout, or boundary where you would like to add a topic or callout. The selected item displays the blue topic frame and the Quick Add tabs.

**READ HINTS**

The map's Central topic has two Add Topic tabs (right and left). Use these tabs to create new main topics.

Callouts and Floating topics only have one Add Topic Tab, which adds a subtopic.

You can hide the Quick Add tabs in Options.

Use these tabs to add topics to the map:

- The selected topic with blue topic frame and Quick Add tabs. Click the topic's Quick Add tab to add a parent topic, topics at the same level (siblings) or subtopics (children).

- The selected boundary with blue topic frame and Quick Add tab. Click the boundary's Quick Add tab to add a callout topic.
Add Content to Maps

| The selected callout with blue topic frame and Quick Add tab. Click the callout's Quick Add tab to add subtopics (children) topics |

⚠️ READ NOTE

If you are zoomed out to 50% or less, the blue topic frame and the Quick Add tabs will not be displayed.

Create topics using menu commands

On the **Home** or **Insert** tab, in the **Add Topics** group, do one of the following to create a topic:

- **Click New Topic** to add a topic at the same level as the currently selected topic - a sibling topic. (If the central topic is selected, a main topic is created.)
- **Click New Subtopic** to add a topic at the level below the currently selected topic. (If the central topic is selected, a main topic is created, otherwise, a subtopic is created.)

Or

- **Click the New Topic arrow** to add a topic above the current topic (**Add Topic Before**)
- **Click Floating**, and then click on the map background where you want to add the topic.
- **Click Callout** to add a callout to the current topic.

Or on the **Insert** tab, in the **Add Topics** group:

- **Click Parent** to add a topic as the current topic's parent.

Enter topic text

When you create a topic, a placeholder topic appears, and is automatically selected.

- Type the text for the new topic and ENTER.
- To create a line break within the topic text hold SHIFT and press ENTER.
- These additions to your Central Topic can help set the theme for your map.
  - You can add an image to set the tone for the map.

You can also display the revision number and modification date using the **Show / Hide** command. You can reset the revision number on the Map Properties - Statistics tab.
Add the date and / or time to a topic
You can add the date and / or time to any topic on the map. This information is most typically added to the central topic to indicate when the map was current. You may also insert the dates and times in topics to indicate when they were added or the date of an event.

1. Select the topic (info is added in place of the default topic text, or at the beginning of existing text), or select a location within the topic text.
2. On the Insert tab, in the Topic Elements group, click the Date & Time pull-down.
3. Then, either:

<table>
<thead>
<tr>
<th>Select Insert Current Date &amp; Time to insert the date and time using default formatting.</th>
<th>Or</th>
<th>Press CTRL + ALT + D</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select Insert Date &amp; Time for more options</td>
<td>Press CTRL + SHIFT + D</td>
<td></td>
</tr>
</tbody>
</table>

Sortable formats let you use the Sort command to reorganize topics.

The Task Information feature gives you more options for working with task dates for projects: Start and Due dates.

If you are entering or editing a Note, the date / time will be added at the current cursor position within the note.
Paste or import content

You can import content by pasting text from many applications to create topics on your current map. You can also import another map as a branch within the current map. In addition, you can import content from Word, Excel, Project, and MPX files.

What do you want to do?

Create topics by pasting text or an image
Import content from another map

See also:
Edit topics
Topic Notes
Work with Microsoft Project
Work with Microsoft Word
Import a Microsoft Excel file
Import an MPX file

Create a topic by pasting text or an image

You can cut or copy text or an image, then paste it into your map in Map View to create a new topic. The text or image can come from MindManager or from another application. In Outline View you can create a new topic by pasting text. If the pasted text contains paragraph breaks, a separate topic will be created from each paragraph.

1. Copy or cut the text or image from within MindManager or from another application (usually, select it and press CTRL+C to copy or CTRL+X to cut).
2. In Map View or Outline View, click where you want to add the new topic:
   - To create a main topic, select the central topic
   - To create a subtopic, select a topic.
   - To create a floating topic, click on an empty space. (In Map View only.)
3. To paste using the default formatting:
   - On the Home tab, in the Clipboard group, click Paste.
   - Or Press CTRL+V
   - To paste in a different format:
     - On the Home tab, in the Clipboard group, click the Paste arrow, or right-click the topic, and point to Paste in the shortcut menu,
     - Click the format you want to use:
   
**Paste Inside** appends the text or image to the existing topic.
**Paste Unformatted Text** pastes text without formatting - the default formatting is used.

**Paste Formatted Text (RTF)** retains the text formatting.

**Paste Bitmap** creates a new topic with an image.

**Paste Link** pastes the text as a link on the selected topic. The text should be a valid URL, email address, or document link.

**Paste Notes** pastes the text as a note on the current topic, retaining the formatting of the original.

**Paste as Callout** creates a callout on the selected topic.

**Paste as Next topic** creates a new sibling topic below the selected topic.

To see more formats, click **Paste Special**. The formats available will depend on what you have cut or copied.

⚠️ **READ NOTE**

The text formatting is retained when you use the Paste command, unless you paste **Unformatted text**. The pasted topic will then use the default topic formatting. To automatically use MindManager’s default formatting for all text pasted from other applications, clear the option to use formatting from the original.

**Import a map as topics**

You can import an existing map as a set of topics for the current map. The imported map’s central topic will become a subtopic of the currently selected topic.

⚠️ **READ NOTE**

**Insert Map** is disabled for flowcharts

1. Do **one** of the following:

   - Select a topic, then on the **Insert** tab, in the **Branch** group, click **Insert Map**.
   - Or Right-click a topic on the current map, click **Insert**, and then click **Map**.

2. Choose the map you want to import.

✔️ **READ HINT**

   If you only want to import part of a map, you can open it and copy the topics, then paste them into the current map, or simply import the whole map and delete the unwanted topics.
Brainstorm

The **Brainstorm** function speeds the entry of new topics when you are creating a new map or adding content to an existing map. When you've finished the brainstorming session you can drag the results in the map to structure your ideas. You can use an Analysis View as a complement to brainstorming to rate and categorize your topics.

**READ NOTE**

If you want to limit your session to a certain amount of time use the **Timer** tool to set a countdown clock before you begin that will alert you when the time is up.

**READ HINT**

The Brainstorm tool does not work if you have read-only permission for a map. Check with the map's owner or your system administrator to change a map's permissions.

You can also use the components of the brainstorming tool independently at any time.

This feature is disabled by default. To see these options click the **File** tab, click **Options**, and then click **Add-Ins**.

---

**Step 1: Define Challenges**

Define a set of challenges that are added to the map as main topics.

- At the top of the pane, click **Define Challenges**.
- Click **Custom challenges** to generate your own challenges, or click **Predefined challenges** to choose challenges from a list of possibilities. Each challenge you choose is added to the map. Use the tabs in the dialog that appears to switch between Custom and Predefined challenge entry.
- Record all your potential challenges - don't worry about ordering or prioritizing them yet.
- Step through the Challenge Inspiration Cards at the bottom of the pane to help generate ideas.
Hints for using card decks ▼

Using Brainstorm Challenge and Idea card decks

- The back of each card contains additional information. Click the card to flip it.
- To see the cards in a separate window, click . When you close this window, the cards move back to the pane.
- The same card decks are used for all open maps. Each time you start MindManager it uses default decks.
- Marking cards as favorites allows you to use a subset of the cards in the deck. Click below the card to mark it as a favorite. Once you have marked your favorites in the deck, click or to move through the favorite cards.
- Right-click on the cards display to customize the deck by adding, editing and deleting cards.
- If you want to save the current decks (including your marked favorites), you can save them in a Mindjet Cards (.mmbd) file.
- To load a customized cards file, right-click on the cards display section of the Brainstorm task pane.

Step 2: Generate ideas

- Select the challenge you want to address on your map.
- Click Generate Ideas at the top of the pane, and then click Enter ideas.
- Use the Inspiration Cards at the bottom of the pane to help you generate ideas.

Step 3: Categorize and refine

Add topics to help you group the ideas that address your challenges:

- Select a challenge topic whose ideas you want to group, then click Categorize & Refine.
- Select one or more categorization branch names from the pull-down, and then click Add branches to map.
- Drag and drop each idea onto its group.

Add topics to further refine each idea:

- Select an idea topic on the map.
- Select one or more refinement branch names from the pull-down, and then click Add branches to topic.

Use Brainstorm functions independently

You can use the Brainstorm functions independently to help you generate the types of topics you want.

- On the Advanced tab, click the Brainstorm pull-down, and then select the function you want to use from the menu.
Use Map Parts

MindManager comes with two basic types of Map Parts, both displayed in the Map Parts task pane:

**Static Map Parts** are topic structures with standard content. Their purpose is to save time re-entering frequently used or common information sets such as days of the week, actions, standard meeting agendas etc. You can create your own Map Parts from frequently used topics.

Static Map Parts are displayed in the top-level Map Parts folder.

**Smart Map Parts** are a special type of Map Parts that contain active links to applications and web services which are external to MindManager. They have the ability to integrate data retrieved from desktop programs, application databases, search engines and online news organizations into a map by using XML, XSL and Web Services technologies.

Smart Map Parts and Web Services Map Parts are displayed in subfolders under the top-level Map Parts folder.

**READ NOTE**

If you do not see the File Explorer or Microsoft Excel Linker ECommerce, etc.) in the Map Parts pane, you need to enable these add-ins in MindManager.

What do you want to do?

1. **Add a Map Part to your map**
2. **Create or modify a Static Map Part**
3. **Use Smart Map Parts**
4. **Refresh Map Parts**
5. **Convert a Smart Map Part to a static topic**

**See also:**

- Manage Map Parts
- Work with Microsoft Excel

---

**Add a Map Part to your map**

1. Do **one** of the following:

   - **On the Insert tab, in the Branch group, click Map Parts.**
   - **Or**

   - **Click the Task Pane’s Map Parts tab.**

2. In the **Map Parts** task pane, navigate to the Map Parts folder you want to use. (The top folder for generic, static Map Parts, or the subfolders for Smart Map Parts or Web Services Map Parts.)

**READ HINT**

To see the Map Parts as a set of thumbnails, right-click the list background and select Thumbnails View.
3. In the lower pane, click the Map Part that you want to add and drag it onto the map. Use the visual cue to drop the part as a main topic, subtopic or floating topic.

⚠️ READ NOTE

You can only add map parts to a flowchart as a floating topic. After adding the map part, connect it to the flowchart using a relationship line.

Map parts in the top-level folder are static, and they become normal map topics and subtopics once they are added to the map. You can use these just as you would use topics that you added from scratch. Adding a Smart Map Part or Web Services Map Part activates its link (if you have an active Internet connection), and the Map Part will automatically be populated with information from the data source. Some Map Parts require you to enter information. For example, if you add the Amazon Search Map Part, a dialog displays so you can enter the search details. If you cancel the action, the dialog closes and the Map Part is removed from the map.

You can modify the topics added as a Map Part. If you modify the subtopics of a Smart Map Part or a Web Services Map Part your changes will be lost if it is refreshed.

Create or modify a Static Map Part

You can save part of a map you create as a static Map Part for easy re-use. You can also modify existing Map Parts.

Create a Static Map Part

1. Select the topic(s) that you want to save as Map Parts.

✅ READ HINT

You can select multiple topics to save. Each topic along with its attached subtopics and callouts will be saved as a separate Map Part.

2. To open the Map Parts task pane do one of the following:

On the Insert tab, in the Branch group, click Map Parts.

Or

On the Status Bar click the Task Panes button , then click Map Parts.

3. In the top section of the Map Parts task pane, navigate to the Map Parts folder where you want to add the new part.

✅ READ HINT

To create a new subfolder, right-click a folder and then click New Folder.

4. Do one of the following:
Add Content to Maps

Drag the topics from the map to the lower preview pane in the Map Parts task pane. Or At the top of the preview pane, click Add Selected Topic(s).

The new Map Part(s) will appear in the preview pane.

Modify a Static Map Part

In the Map Parts task pane, click on the arrow to the right of the part to show a menu of commands to modify, copy, duplicate, delete and rename the part.

1. To change the content of the part, click Modify.
2. The Map Part opens so you can edit its content.
3. When you are done editing, click Save on the Quick Access Toolbar or click File > Save. The Map Part is automatically saved in the proper location on your system.
4. Close the Map Part.

Use Smart Map Parts

MindManager comes with several categories of Smart Map Parts. You can modify Smart Map Parts using commands to modify, copy, duplicate, delete and rename the part. To see the latest content for the part, you can refresh it.

Once you have added a Map Part to your map you can see options for viewing and updating its information in its context menu. Right-click on the part to see these options. The particular options available will depend on the Map Part's function.

File Explorer

These Map Parts create links to files and subfolders within a particular folder on your system.

Add a File Explorer Map Part to a map ▼

1. Select an existing topic or create a new topic to act as a root topic for the Map Part.
2. Do one of the following:
   - On the Insert tab, in the Branch group, click Map Parts.
   - Or On the Status Bar click the Task Panes button , then click Map Parts.
3. In the Map Parts task pane, navigate to the File Explorer Map Parts folder. The Map Parts are displayed in the bottom pane:
   - All Files and Folders creates links to all files and subfolders under the target folder.
   - All Files creates links to all files within the target folder.
   - All Folders creates links to all subfolders under the target folder.
4. Drag the Map Part onto the map (or just click on the part to add it as a subtopic of the currently-selected topic).

5. Select the folder that you want the map part to link to, then click OK.

After a short pause, the Map Part will be populated with links to the files or folders on your system. The links will be updated (reflecting any files or folders added or removed) only when the Map Part is refreshed. ✔️ READ HINT

The Map Index task pane Elements list Business Topics group displays all the topics on your map that contain File Explorer map part queries and their results.

Microsoft Excel Linker
The Microsoft Excel Linker Map Parts feature two-way communication between MindManager and Microsoft Excel. This allows you to add data to your map and edit it using either application. See Work with Microsoft Excel for more information.

News Feeds
You can create your own news feed Map Parts to give you the latest headlines from a specific source. The content is updated each time the Map Part is refreshed.

Create your own News Feed Map Parts ▼

You can create your own news feed Map Parts using any source that provides its feeds in RSS (or RDF) format. RSS is an XML-based format for distributing and aggregating Web content (such as news headlines and blogger entries). Many popular news sites such as CNet and Yahoo provide RSS feeds free of charge for use by individuals and non-profit organizations for personal, non-commercial uses. Additionally, independent news aggregator sites like Syndic8 list targets for thousands of RSS feeds from a wide variety of sources.

1. Do one of the following:
   - On the Insert tab, in the Branch group, click Map Parts.
   - Or
   - On the Status Bar click the Task Panes button, then click Map Parts.

2. In the Map Parts task pane right-click on the Map Parts folder.

3. Click Add new News Feed to Library.

4. Enter the URL of the feed source. You can obtain the URL by copying it from the site you want to link to. In some cases you'll see a button for the feed ➤ XML.
   - Click the button and click Copy Shortcut, then switch back to MindManager. Right-click in the URL box and click Paste.
   - Click the button, copy the URL from the browser Address field, and then switch back to MindManager. Right-click in the URL box and click Paste.
5. Click OK.
6. In the Map Parts task pane, drag the new Map Part to the folder where you want to add this part. (Right-click and then click New Folder if you want to create a new folder.)

The new News Feed Map Part will appear in the Map Parts pane, and you can use it as you would any other Map Part.  

Some news feeds may not have an associated image, so they show up without a label in the Library. You can add your own text label to the part by doing the following:

Click the arrow next to the Map Part, and then click Modify. The Map Part appears in its own window. Add text as you would to any topic. Then, click Save and Close in the upper-right of the window.

Refresh Smart Map Parts
Smart Map Parts keep an active link to the original data source, so when the source changes, the Map Part can be updated to reflect the latest state of the external data. You can refresh all Map Parts, or just a single Map Part to see the most recent information. You may also convert a Smart Map Part to a static Map Part.

Refresh all Smart Map Parts
- Right-click the map background, and then click Refresh All Topics. During the refresh operation, the whole Smart Map Part is deleted and replaced with a new part containing the latest data from the data source. All modifications to the part (e.g. adding of subtopics, changing the text or visual attributes) are lost. The progress bar shows the name of each topic in the map.

Refresh a single Smart Map Part
1. Right-click the Smart Map Part icon on the root topic (for example, ).
2. Click Refresh.

Convert a Smart Map part to a static topic
1. Right-click the root topic's Smart Map Part icon.
2. Click Convert to Regular or Disconnect ...

The Map Part is no longer linked to its source and the current data will no longer be refreshed. Disconnected Microsoft Excel data becomes a Spreadsheet.
Select topics and objects directly

Select a single topic or object

- Click the topic or object. A blue highlight appears to show that it is selected.

Select multiple topics and objects

- Hold down the CTRL key and click to select or de-select them.
- Hold down the SHIFT key and use the arrow keys to select additional topics.

Select all topics within a particular area on the map

Click and drag a rectangle. All topics within the rectangle will be selected.

![Image](86x497_to_232x628)

**READ NOTE**
If this "rubber band" selection seems slow, or if you prefer not to see shading inside the selection area disable the Visual Effects option Show transparent fill in rubber band selection.

Use the Select command

On the Advanced tab, in the Edit Topics group, the Select command offers the following options for selecting multiple topics and objects:

- **Select All** selects all topics (including callouts and floating topics) and objects (including relationship lines and boundaries).
- **Select Siblings** selects all topics at the same level (or levels) as the current topic(s).
- **Select Descendants** selects all topics branching off the current topic(s).
- **Select Special** selects topics and objects by type
  - **Invert Selection** de-selects the currently selected topics and objects and selects all other topics and objects.
  - **Power Select** selects topics based on their properties. Within Power Select, you can also choose to select by a previously saved query.

De-select topics
- To de-select individual topics press CTRL and click them.
- To de-select all topics, click the map background in Map View or on the empty space below the outline in Outline View.

Select topics and objects by type

The Select Special command allows you to select objects in Map View based on their type.

1. Do one of the following:
Click on the map background to select from all topics (no topics selected).

Or

Select a topic to select only from this topic and its descendants.

2. On the Advanced tab, in the Edit Topics group, click the Select arrow, and then click Select Special.

3. Select the check boxes for the types of elements you want to select.

4. Click OK.

Select topics by properties

The Power Select command lets you select a set of topics based on their properties, including the topic text. You can choose to select all topics that match (or do not match) the criteria you choose. You can also use a previously Saved Query to select topics.

![Read Hint](image)

If you want to show or hide topics based on their properties use the Power Filter command.

Use Power Select

1. On the Advanced tab, in the Edit Topics group, click the Select arrow, and then click Power Select.

2. Do one of the following:

   In the Power Select dialog, on the left side, choose the property type.

   Then, on the right side, select the match criteria. Note that you can select a combination of properties of different types.

   Or

   Click Saved Queries to save the current query (or to select match criteria previously stored as a saved query).

3. Check Expand branches to show all matches if you want branches that contain matches to expand automatically.

4. Click Select, and then click Select Matching Topics or click Select Non-matching Topics.

Select by Saved Query

1. On the Advanced tab, in the Edit Topics group, click the Select arrow.

2. In the Saved Query section, click the name of the query you want to use as selection criteria.

   Topics that match the criteria will be selected.

   ![Read Hint](image)

   If you want to select all non-matching topics, click the Select arrow, and then click Invert Selection.
### Select topics by topic text using the Find command

The Find command allows you to specify some text and select all the topics on your map that contain matching text.

**Read Hint**

The **Power Select** feature is more flexible in that it allows you to find topics with specific text alone, or in combination with other topic properties (such as specific map markers, task information, topic styles, and review information).

The **Find** command finds only matching text.

### Use the Find command to select topics

1. Enter your text in the **Find** box at the right end of the ribbon.
2. Click the **Find & Search** button, and then click **Find All**.
3. All the topics with matching text will be selected.

The **Find** command provides additional features for tailoring your search and offers an option to replace the matching text.

### Edit topics

You can replace or modify the text of any topic in Map view or Outline view by editing it directly, or by using the Cut, Copy and Paste commands to paste text into a topic.

You can also change the width of a topic to control how the text wraps, or split a single topic into multiple topics.

### What do you want to do?

- **Edit the topic text**
- **Cut, copy, or paste topic text**
- **Change the topic width**
- **Split a topic into multiple topics**

**See also:**

- **Keyboard shortcuts**

### Edit the topic text

1. Select the topic.

   ![Central Topic]

   Move the mouse near the text. A small cursor bar displays next to the mouse arrow.

2. Next, do one of the following:
• To overwrite the existing text, press F2 to highlight the text, and then start typing. The new text will overwrite the current text. (Map View only).
• To edit the current text, click again or press F2, then position the cursor and type the new text.
• To begin editing at the beginning of the text, press SPACEBAR.
• To begin editing at the end of the text, press SHIFT+SPACEBAR.

✔ READ HINT

Press SHIFT+ENTER to create a line break

3. Press ENTER when you've finished, or press ESC to cancel editing.
See Keyboard Shortcuts for more info on keystrokes used in text editing mode.

Cut, copy, and paste topic text

You can also use the Cut, Copy, Paste and Paste Inside commands to modify the topic text. You can paste text from MindManager or another application into your topics.

Cut or copy text from a topic

1. Select the topic.
2. Click again on the topic text, and highlight what you want to cut or copy.
3. On the Home tab, in the Clipboard group, click Cut or Copy.

Hints
Press CTRL+C.

Append cut or copied text to an existing topic.

1. Select the topic.
2. On the Home tab, in the Clipboard group, click the Paste arrow, and then click Paste Inside.

✔ READ HINT

For map topics, right-click on the topic and click Paste Inside. (This feature does not work for flowchart topics).

Paste cut or copied text at a specific location inside a topic

1. Select the topic.
2. Click again to begin edit mode.
3. Click at the location you want to paste the text.
4. On the Home tab, in the Clipboard group, click Paste.

Hints
Press CTRL+V

Create a new topic from cut or copied text

1. Select the parent topic.
2. Do one of the following:
• On the **Home** tab, in the **Clipboard** group, click **Paste**.
• Right-click, then click **Paste**.

**READ HINT**

To paste the new topic without formatting (so its formatting is determined by the Map Theme). Click the **Paste** arrow, and then click **Paste Special** and choose **Unformatted Text**.

---

**Change the topic width**

The topic width determines whether the text will wrap.

Change the width of a single topic by dragging the outside edge.
To the reformat topic text to a single line, rest the pointer on the outer edge of the blue topic frame so that the resize cursor shows and double-click.

**READ HINT**

Control the preferred width for all topics using the size formatting options.

---

**Split a topic into multiple topics**

You can split a topic into multiple topics or multiple subtopics using spaces as a delimiter.

**READ NOTE**

You cannot undo this command.

**Split Topic** is not available in flowcharts.

1. Select the topic.
2. On the ribbon's **Advanced** tab, in the **Edit Topics** group, click **Split Topic**.
3. Select **As Multiple Topics** to create a group of new topics, all at the same level, or select **As Multiple Subtopics** to create a topic from the first word, with the other words as subtopics.

**READ HINT**

Right-click, and then click **Split Topic**.

To split into multiple topics press CTRL+ALT+ENTER.
To split into a topic with multiple subtopics press CTRL+ALT+INSERT.

Or, you can split the topic at a particular location, using the text to the right of the cursor for the new topic(s).
1. Select the topic, and click inside the topic at the location where you want to split it.

2. On the ribbon’s **Advanced** tab, in the **Edit Topics** group, click **Split Topic**.

   **Read Hint**

   Right-click, and then click **Split Topic**.

3. Click the topic type you want to create with the text to the right of the cursor. If you choose one of the "Multiple" options, the text is split at the cursor location, and then into additional new topics using spaces as the delimiter.

   **Hint**

   To split and create a sibling topic press ALT+SHIFT+Down.

   **Hint**

   To split and create a subtopic press ALT+SHIFT+Right.

---

### Find and replace topic text

The **Find** command lets you find text in the current map. You can find the topics one by one, then edit and move on to the next. Or you can find and select all the matching topics, so you can edit them as a group (for example, apply icons or colors to add visual cues and allow filtering), copy them, or delete them from the map.

The **Replace** command finds the text and replaces it with text you enter. You can step through matching topics one at a time, or replace all the matching text in the map.

The **Find and Replace** **Options** let you:

- specify which map elements to include in the search (choose topic text, notes, links, or task info)
- restrict your search to a specific part of the map (for example, only subtopics of the current topic),
- match case or whole words only

**Read Hint**

To find text in other maps, use the **Search** command.

You can also **find topics based on their icons or tags**.

To find and select all topics with matching text in combination with other properties, use **Power Select**.

---

**What do you want to do?**

- Find text
- Replace text
- Change the search starting point

See also:

- Search for maps or documents
- Markers
- Select topics and objects
Add Content to Maps

Find text

1. On the top menu bar, enter the search text in the Find box, or click its arrow to choose from the history of the last 10 searches (in the order of last used).
2. Click , click Find, and then click Options if you wish to further specify which map elements to search, which parts of the map to search, and criteria for positive matches. By default, only the topic text is searched.
3. Do one of the following:
   - Click Find All to search the whole map and select all matching topics. Then you can edit the topics as a group (add icons or colors as visual cues and to allow filtering) copy or delete them from the map.
   - Click Find Next to find the next occurrence of the search text. Then you can do any (or none) of the following:
     • Edit the text in the map
     • Click Find Next or Enter (or press SHIFT+F4 if you've been working on the map) to resume the search starting with the current topic.
     • Click , then click Replace if you want to replace the text.
   - Press ESC or click Close to cancel the search

You'll see a message if no matching text is found.

**READ HINT**
The ENTER key is set to the Find Next button. So by just pressing ENTER, you can search the entire map.

Replace text

1. On the top menu bar click , then click Replace.
2. Enter the search text in the Find what box. The drop-down list shows the history of the last 10 searches (in the order of last used).
3. Enter the replacement text in the **Replace with** field. The drop-down list shows the history of the last 10 replacement phrases (in the order of last used).

4. Click **Options** if you wish to further specify which map elements to search, which parts of the map to search, and criteria for positive matches. By default, only the topic text is searched.

5. Do **one** of the following:

<table>
<thead>
<tr>
<th>Click <strong>Find Next</strong> to find the first occurrence of the text, then either:</th>
<th>Or Click <strong>Replace All</strong> to search the whole map and replace all matching text.</th>
</tr>
</thead>
</table>
| • click **Replace** to replace the text and find the next match or  
• click **Find Next** to skip this text and find the next match  
• press ESC or click **Close** to cancel the search |  |

**Read Hint**

Map changes made by the **Replace All** command can be undone with one (compound) **Undo**.

You'll see a message if no matching text is found.

At the end of the search, a message box shows that the search is complete and the number of replacements made.

**Read Hint**

The ENTER key is set to the **Replace** button. So by just pressing ENTER, you can change the text continuously for the whole map.

**Change the search starting point**

Each new search starts with the currently selected topic. If multiple topics are selected, the search starts with the primary selection. If nothing is selected, it starts at the central topic. Topics are searched in a clockwise direction.

- To begin the search with a different topic, select it.

When you switch between maps, MindManager "remembers" the current search topic, so that you can resume the search where you left off.
Reorganize topics

You can reorganize the topics on your map by dragging one or more topics to a new location, or by using the Cut, Copy, and Paste commands. Automatic topic positioning features can help keep your map organized and balanced. When you delete a topic, you can choose to keep its subtopics and callouts.

<table>
<thead>
<tr>
<th>What do you want to do?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drag and drop topics on a map</td>
</tr>
<tr>
<td>Use automatic topic positioning</td>
</tr>
<tr>
<td>Drag and drop topics in Outline View</td>
</tr>
<tr>
<td>Cut, copy, and paste topics</td>
</tr>
<tr>
<td>Sort topics</td>
</tr>
<tr>
<td>Group floating topics or flowchart topics</td>
</tr>
<tr>
<td>Delete or remove topics</td>
</tr>
</tbody>
</table>

**Drag and drop topics on a map**

You can drag and drop topics in **Map view**, when viewing a **slide**, or in **Walk Through** view.

Select the topic(s) and drag them to a new position on the map. A visual cue appears showing where the topic(s) will be added.

- To copy, press CTRL as you drag and drop.
- To create or move a floating topic, press SHIFT as you drag and drop.
- Callouts remain attached to their parent when they are moved. Use **Cut** and **Paste** to move a callout to a different parent.

**READ HINT**

If you want objects to snap to a grid during drag and drop, enable the **Snap to grid** option.

You can use drag and drop to move and copy topics between maps that you are viewing simultaneously.

When you drag a topic and hover over another topic, an options menu appears containing commands for repositioning topics:

- To drop the dragged topic as a subtopic of the destination topic, choose **Drop as Subtopic**.
• To drop the dragged topic as a sibling topic of the destination topic, choose Drop as Sibling Topic Before or Drop as Sibling Topic After.

• You can also drag topics to drop as notes, or to insert links or relationships.

Reposition main topics

Normally, when you move a main topic MindManager automatically determines the best new location for it. The result is that the topic may not be located just where you want it - especially on maps with only a few main topics.

• To move a main topic to a specific position do one of the following:
  o Drag the topic by its handle.
  o Press ALT while you drag the topic to its new position.
  o Drag the topic using the right mouse button.

**READ HINT**

If you don't see any topic handles use the Show / Hide command to display Main Topic Handles.

Once you drop the topic at its new position its handle becomes black to show that it has been freely positioned. The topic will maintain this approximate position as you add to or edit your map but may shift slightly to avoid overlapping with other topics.

Use automatic topic positioning

Return topics to their default positions

• For a single topic, right-click, and then click Reset Position.
• For all topics, right-click the map background, and then click Reset All Topic Positions.

**READ HINT** Press CTRL+ALT+SPACE

Balance topics

You can ensure that new main topics are distributed evenly on the map as you add them by enabling the Balance new main topics option.

To distribute topics evenly on the map at any time, do one of the following:

On the Design tab, click Balance Map. Or Right-click on the map background, and then click Balance Map.

**READ HINT**

There are several format settings to control the topic spacing and the layout of map topics.
**Add Content to Maps**

**Allow floating topic overlap**

To allow map subtopics to overlap a floating topic, right-click the floating topic and clear the **Snapped** option. When checked, this option causes floating topics to move out of the way of new subtopics. Note that this option is re-enabled automatically if you move the floating topic.

**Drag and drop topics in Outline View**

- Select the topic(s) and drag them to a new position in the outline. A visual cue appears showing where the topic(s) will be added.
  - Drag topics up and down to reorder them.
  - Point to the left half of the target topic to create a sibling (topic at the same level).
  - Point to the right half of the target topic to create a subtopic of the target.

<table>
<thead>
<tr>
<th>READ HINT</th>
</tr>
</thead>
<tbody>
<tr>
<td>To copy, press CTRL as you drag and drop.</td>
</tr>
</tbody>
</table>

**Cut, copy, and paste topics**

Besides using the direct drag and drop method, you can also move and copy topics using the **Cut**, **Copy**, and **Paste** commands. You can use this method to copy topics to another map, or to move or paste a topic as a callout.

1. Select the topic you want to copy or move.
2. On the **Home** tab, in the **Clipboard** group, click **Copy** or **Cut**.
   - Press CTRL+C to copy or CTRL+X to cut.
3. **Optional** Switch to the map you want to paste to.
4. Do **one** of the following:
   - Select the target topic (the pasted topic becomes a subtopic).
   - Or Click on an empty space on the map (the pasted topic becomes a floating topic).

5. On the **Home** tab, in the **Clipboard** group, click **Paste** to create a subtopic of the current topic.

<table>
<thead>
<tr>
<th>READ HINT</th>
</tr>
</thead>
<tbody>
<tr>
<td>To paste the text inside the topic or to create other topics, select an option in the <strong>Paste</strong> button menu.</td>
</tr>
</tbody>
</table>

  - Press CTRL+V to create a subtopic of the current topic
  - Press CTRL+ALT+V to create a sibling of the current topic.

**Paste a topic as a callout**

1. Select the topic you want to copy or move.
2. On the **Home** tab, in the **Clipboard** group, click **Copy** or **Cut**.
   - Press CTRL+C to copy or CTRL+X to cut.
3. Optional Switch to the map you want to paste to.
4. Right-click the target topic, click Paste, then click Paste as callout.

Sort topics

This command lets you quickly sort a set of selected topics and their sub-topics. If you select the central topic, you sort the whole map.

1. Select the topic(s), or select the central topic to sort the whole map.
2. On the Advanced tab, in the Edit Topics group, click the Sort arrow, then click Sort Options and choose the options to use.

   ![Read Note]

   If you do not see the Sort command, you need to enable the Sort Topics add-in.

3. Click OK to sort the map with the current settings.

   ![Read Hint]

   To instantly sort a branch or the whole map: click Sort in the Advanced tab's Edit Topics group to sort the map using the default options: Alphanumeric sort, subtopics only sort depth, forward sort direction.

The map topics are sorted and reorganized. On the map, main topics begin at the upper-right and continue clockwise, and subtopics are sorted top to bottom.

Group floating topics or flowchart topics

You can group floating topics or flowchart topics by using a shape or Smart Shape as a container. When you move a shape or Smart Shape that contains floating or flowchart topics, all topics move with the container object.

Floating or flowchart topics remain with the Smart Shape segment in which they were first contained when you resize or insert segments. Select the topic you want to copy or move.

1. Do one of the following:

   ![On the Insert tab, in the Objects group, click Shapes, and choose a shape type. Note: You cannot use divider or bracket shapes as topic containers.]
   Or

   ![On the Insert tab, in the Objects group, click the Smart Shapes arrow, and choose a Smart Shape type.]

2. Click in the map where you want the container object, hold down the mouse button, and drag over the floating or flowchart topics.

Now when you move the shape or Smart Shape, the topics contained within move with it.

   ![Read Hints]

   You can also use an existing shape or Smart Shape as a topic container by dragging floating or flowchart topics onto the object.
Shapes and Smart Shapes are topic containers by default. You can change a topic container into regular shape that is independent of the floating or flowchart topics over which it is positioned by right-clicking it, and unchecking **Topic Container**.

**Delete or remove topics**

You can *delete* a topic including all its subtopics and callouts, or you can *remove* a topic but leave its subtopics and callouts intact.

**Read Hint**

If you only wish to suppress the display of certain map elements or topics you can use the *Show / Hide* command and the *Filter* commands to hide them without removing them from the map.

**Delete a topic and all of its subtopics**

- Select the topic(s) and do **one** of the following:
  
  **Press DELETE.** The topic(s) (including icons, images and shapes), attached subtopics and callouts will be deleted.  
  
  **Or** On the **Home** tab, click the **Delete** button, and then select **Topic**.

**Remove a topic, but keep all its subtopics and callouts**

1. Right-click the topic, then click **Remove Topic**.

   **Read Note**
   
   Press **CTRL+SHIFT+DELETE**.

2. The topic (including icons, images and shapes) will be removed, and its subtopics will be promoted up one level. Its attached callouts will be converted to floating topics. (The new floating topics will not display in Outline View, but will appear on the map.)

   **Read Note**
   
   If you removed or deleted the topic(s) in error, click **Undo** on the **Quick Access Toolbar** to restore them.
## Adding Topic Elements

### Links

Links serve as references to external documents, including other maps, Web addresses, or email addresses. Using Links lets you avoid cluttering the map by including or duplicating information, and ensures that you see an updated document or page each time you click the link.

**Read Hint**

If you want to include a document within the map file, use the Attachments feature.

You can ...  
- create links on your map in Map View or Outline View, and in topic Notes in the Notes window.  
- give a link a descriptive title, helping you clarify the link’s destination.  
- create multiple links on a topic. When you rest your pointer on the icon you’ll see the link destination.

**Read Hint**  
You can use the Power Select and Power Filter commands to select and filter topics that have links attached.

The Map Index task pane Elements list displays all the topics on your map that contain links.

- add links that point to:
  - an existing file (including another map), a folder, or a Web page  
- another topic within the current map or in another map  
- a new document (which is created when you add the link)  
- an email address

---

### Mindjet Online Features

You can include links to files and document versions stored online in Mindjet Files on your maps.

<table>
<thead>
<tr>
<th>What do you want to do?</th>
<th>Link to a file, folder, or Web page</th>
<th>Link to a topic in this map</th>
<th>Link to a new document</th>
<th>Link to an email address</th>
<th>Other ways to create links</th>
<th>Manage links</th>
<th>Display link targets in the built-in Browser</th>
<th>Show locations of target files</th>
</tr>
</thead>
</table>
When you create a link on a map, an icon will appear on the topic. The icon indicates the type of link.

- multiple links (click to see the list)
- link to local folder or a folder online in Mindjet Files
- link to local map
- link to map or file in Mindjet Files
- link to document version in Mindjet Files
- (or other document type icon) link to file, either local or online in Mindjet Files
- (or other browser icon or favicon) link to Web page
- link to a topic in this map
- link to a topic in another local map
- link to topic in map online in Mindjet Files
- link to topic in a map Version online in Mindjet Files

---

**Link to a file, folder, or Web page**

You can link to an existing file (including another map), Web page, or folder. If you link to another map, you can select a specific topic to link to.

1. Select the topic or click the location in a topic note where you want the link.
2. Do one of the following:
   - On the **Home** tab or **Insert** tab, in the **Topic Elements** group, click **Link**.
   - Right-click the topic and click **Add Link**.
   - Press **CTRL+ Shift + K**.
3. In the **Add Link** dialog, do one of the following:

   **Link to a file, folder, or web page**

   **Link to another map**

   Click the **Link Type** drop-down, and click **URL / File Path**. In the **Link Target** box enter the file name and path, the folder path or the URL, or click the browser buttons for File and Folder to find the destination. Browse to or enter the name of a MindManager map file in the **Link Target** box.

   **Optional** Select a specific topic to link to
• Next to the **Topic** box, click **Select** then click a topic.

  If you link maps together you can use **Linked Maps View** to see all the linked maps at once, execute commands to open, print and export them, or combine the linked maps into one large map.  

  ![Read Hint](image)

  Click the **Link Type** drop-down, and click **URL / File Path**. In the **Link Target** box enter the file name and path, the folder path or the URL, or click the browser buttons for File and Folder to find the destination. (For a Web page copy and paste the URL from your browser into the **Link Target** box. You do not need to include "www.")

  For Folders or Files, you can choose whether the link path is stored as absolute or relative to the location of the parent map. If you create a map with URL links, favicons are displayed for these links by default, and MindManager will attempt to connect to the Internet whenever you open the map. Use MindManager's **Visual Effects** options to disable this behavior.

4. You can assign a title to a link in the **Link Title** box. When you point to the link, the link title is displayed along with the URL, path, or file name.

5. Click **Advanced** to set special options used when you export your map to another document format or to a web page, or when you want to pass arguments with the link.

6. A link icon appears on the topic, reflecting the type of link you've added - for example if you link to a map, a map link icon appears ; if you link to a Word document, the Word icon appears , and so on. Some web addresses may use favicons (custom icons) when you link to them. A topic with multiple links displays this icon: .

To see the link's title or target location(s), point to it.

![Read Hint](image)

See **Other ways to create links** for more ways to create links.

---

**Check for broken file and folder links**

If you move, rename or delete a document that is a link destination all links to it will be "broken." You can check the map for broken links to files and folders. ![Read Note](image)

This command does not check links to web sites or other web locations.

1. On the Home tab or the **Insert** tab, in the **Topic Elements** group, click the **Link** arrow, and then click **Check File & Folder Links**.

2. If a broken link is found, you can choose to browse for the file to repair the link or remove the link from the map.

![Read Hints](image)

If you click a broken link you'll get a message that offers you the opportunity to repair it immediately.
You can set an option to check file links dynamically. A broken link icon will be displayed for file links that cannot be validated. For topics with multiple links, the broken link icon is only displayed in the list of links - it does not change the multi-link icon.

**Link to a topic in this map**

You can link from one topic to another.

1. Select the topic, or click the location in a note where you want the link.
2. Do one of the following:

   - On the **Home** tab or **Insert** tab, in the **Topic Elements** group, click **Link**.
   - Right-click the topic and click **Add Link**.
   - Press **CTRL+ Shift + K**.

3. In the **Add Link** dialog, click the **Link Type** drop-down, and then click **Topic in this Map**. A list of all map topics will appear.
4. Click the map topic you want to link to.
5. You can assign a title to a link in the **Link Title** box. When you point to the link, the link title is displayed along with the topic text.
6. Click **Advanced** to set special options used when you export your map to another document format or to a web page, or when you want to pass arguments with the link.
7. The topic link icon appears on the topic, or (on a topic with multiple links) in the link icon pull-down.

   ![READ HINT]

   See [Other ways to create links](#) for more ways to create links.

**Link to a topic in this map by dragging**

1. Drag the topic that you want to link to over the topic where you want to insert the link.
2. When the menu button appears, release the mouse button, and choose **Insert Link**.
   
   To insert links between the two topics, choose **Reciprocal Link**.

**Link to a new document**

You can link to a new document that is created at the same time as the link. Add content to the new document immediately or edit it later.

1. Select the topic or click the location in a note where you want the link.
2. Do one of the following:

   - On the **Home** tab or **Insert** tab, in the **Topic Elements** group, click **Link**.
   - Right-click the topic and click **Add Link**.
   - Press **CTRL+ Shift + K**.
3. In the **Add Link** dialog, click the **Link Type** drop-down, and then click **New Document**.

4. Enter the file name in the **Name of new document** box. Choose the appropriate extension from the drop-down next to the **Name of new document** box, such as .docx for a Word document or .xlsx for an Excel spreadsheet.

5. **Full path** shows where the document will be stored. Click **Change** to specify a different location.

6. Click **Edit now** to switch to the appropriate application and add content to the file immediately, or click **Edit later** to just create an empty document.

7. Choose whether the link path is stored as absolute or relative to the location of the map.

8. You can assign a title to a link in the **Link Title** box. When you point to the link, the link title is displayed along with the file's path and name.

9. Click **Advanced** to set special options used when you export your map to another document format or to a web page, or when you want to pass arguments with the link.

10. The document link icon appears on the topic, or (on a topic with multiple links) in the link icon pull-down.

### Link to an email address

Use an email address link to automatically create an email message each time you click on it.

1. Select the topic or click the location in a note where you want the link.

2. Do one of the following:

   | Right-click the topic and click **Add Link**. | Or | On the **Home** tab or **Insert** tab, in the **Topic Elements** group, click **Link**. | Or | Press **CTRL+ Shift + K**. |

3. In the **Add Link** dialog, click the **Link Type** drop-down, and then click **Email Address**.

4. Enter the address, or click it in the list of **Recently used email addresses**.

5. Enter a **Subject** to use for messages created by this link.

6. You can assign a title to a link in the **Link Title** box. When you point to the link, the link title is displayed along with email address.

7. Click **Advanced** to set special options used when you export your map to another document format or to a web page, or when you want to pass arguments with the link.

The email link icon 📨 appears on the topic, or (on a topic with multiple links) in the link icon pull-down. Click on it to begin a new email message.

### Other ways to create links

Here are some shortcuts for creating links:

- **Link to a map using copy and paste:**

  In Map View right-click on the map’s document tab at the bottom of the window, and then click **Copy as Link**. (Or, click the Copy drop-down in the Clipboard Group on the Home Ribbon, then...
Add Content to Maps

select **Copy as Link**. You can then paste the link into a MindManager map or another document. In MindManager, right-click on a topic, click **Paste**, and then click **Paste Link**. In other applications, select a location in the document and use the **Paste** command.

- **Link to a map, file, folder, or version from Mindjet Files using copy and paste:**
  In the Mindjet Files window, right-click the item you want to link to and then click **Copy as Link**. You can copy a link to a folder from the folders list, one or more files from the Files list, or to a Version from the bottom pane’s Versions tab list.
  To create only links on your map, right-click on a map topic or within the note, and then click **Paste Link**. To create new topics with links right-click a topic or the map background, and then click **Paste**.
  In other applications, select a location in the document and use the **Paste** command.

- **Link to a map, file, folder, or version from Mindjet Files using drag and drop:**
  In the Mindjet Files window, select the items you want to link to, then drag them onto a map.
  You can drag to create a link to a folder from the folders list, one or more files from the Files list, or to a Version from the bottom pane’s Previous Versions tab list.

- **Link to a topic using copy and paste:**
  In Map View or Outline View right-click the target topic and select **Copy as Link**, then right-click on a topic (in the same map or in another map) and select **Paste** (pastes source text and link) or **Paste Link** (pastes only the link).
  You can also paste the link into another document or into an email or chat message.

- **Link to a file or web page using copy and paste:**
  Copy the location text, for example `C:\My Documents\myfile.doc` or `http:\www.mindmanager.com\`
  In MindManager, right-click on a topic, click **Paste**, and then click **Paste Link**.

- **Link to a Web page by sending a link from the browser:**
  If you are viewing a Web page or file within the MindManager browser, on the **Browser** task pane toolbar, click the **Add to Map** button.
  To create a link to a Web page from your external browser, click the **Send to MindManager** button in the browser toolbar to create a new topic with a link to the page you are viewing.

- **Link to a file, folder, or web page using drag and drop:**
  - To create a link to a file, drag it from Windows Explorer or other external source (like the desktop, or a dialog with a file list) and drop it into the map, then choose to add it as a link (or press CTRL while you drag and drop to automatically add it as a link).
    Alternatively, you can add it as an Attachment.
  - To create a link to a folder, drag it from Windows Explorer or other external source (like the desktop) and drop it into the map.
To create a link to a web page, drag the link icon from the browser address bar and drop it into the map. A visual cue shows you how the link will be added.

<table>
<thead>
<tr>
<th>Drop location</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty space on map (no cue)</td>
<td>New floating topic with link; link address is new topic text</td>
</tr>
<tr>
<td>Empty space on map (red cue)</td>
<td>New main topic with link; link address is new topic text</td>
</tr>
<tr>
<td>Topic center (green cue)</td>
<td>Link is added to the topic; topic text is not changed.</td>
</tr>
<tr>
<td>Topic edge (red cue)</td>
<td>New subtopic with link; topic text is link address</td>
</tr>
</tbody>
</table>

Once the link is added you can edit the topic text. This does not affect the link itself.

**READ HINT**

To create a floating topic regardless of drop location press SHIFT while dropping the link.

**Manage links**

**Topics with single links**

**Edit a link**

1. **Do one** of the following:

   Right-click the topic link icon (for example 🌐 or 📚) in Map View or Outline View, or right-click the linked text or image in a topic note, and then click **Edit Link**.

   Or

   Click the map topic, or click the note text or image with the link. Then, on the **Home** tab or the **Insert** tab, in the **Topic Elements** group, click the **Link** pull-down, and then click **Edit Link**.

   Or

   Press **CTRL+Shift + K**.

2. Make the changes, and then click **OK**.

**Cut or copy a link from one topic and paste to another**

1. Right-click the topic link icon, and then click **Cut link** or **Copy link**.
2. Right-click the topic or location where you want to add the link, click **Paste**, and then click **Paste Link**.

   **READ HINT**

   If you paste the link on the map background, a new topic is created that includes the link and the link address as the text.

**Copy or move links by dragging in Map view**

- To copy, drag the link to the new topic or into another application.
- To move, press CTRL while dragging.
- You can drag single and multiple links.
- For targets that already contain links, the dragged link is added to the topic's list of links.

**Remove a link**

- Right-click the topic link icon, or on the linked text or image, and then click **Remove link**.
- To remove several (or all) links, select the topics (press CTRL+A to select all topics). On the **Home** tab, click the **Delete** button, and then select **Links**.

   **READ HINT**

   You can suppress the display of link icons on topics in Map view (for example if you want to print the map without them) using the **Show / Hide** command.

**Topics with multiple links**

When a topic has multiple links, it displays this icon: ⚜️. You can manage the links by doing the following:

- To remove all the links, click the multi-link icon, and then click **Remove All Links**.
- To add, edit, remove or re-order the links, click the multi-link icon, and then click **Manage Links**.

   **READ NOTE**

   The first link in the list is the "primary link". Only this link is included in exports to **Microsoft Project**. Other exports include all the links.

**Display link targets in the built-in Browser**

You can display supported link targets in the MindManager **Browser** pane. Supported targets include any files (such as HTML files) that can be opened by the browser.

To use the built-in browser to view links:

- On the **Home** tab or **Insert** tab, click the **Link** arrow, and then click **Use Built-in Browser for Links**.

   **READ NOTE**

   **READ HINT**
If you navigate to a different page, and you want to add the link to your map, on the Browser task pane toolbar, click the **Add to Map** button. The link is added to the map on the currently selected topic, or on the Central topic if nothing is selected.

The Browser uses your system’s Microsoft Internet Explorer security settings.

If you do not see this option, check to see that you have the corresponding **add-in** installed and enabled.

To open a page that is displayed in the built-in Browser externally in your system browser:
- Click the **Open Outside MindManager** button on the Browser toolbar.

To open a link outside of MindManager when the **Use Built-in Browser for Links** option is enabled:

<table>
<thead>
<tr>
<th>When the topic contains a single link:</th>
<th>When a topic contains multiple links</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right-click the link icon, then click <strong>Open Link Outside MindManager</strong>, or press CTRL while you click the link icon.</td>
<td>Click the link icon, point to the link you want to open, and then click <strong>Open Link Outside MindManager</strong></td>
</tr>
</tbody>
</table>

**Show locations of target files**

**Show target files or folders in Explorer**

When a link points to a file or folder on your local system, you can show the link’s target in Windows Explorer.

<table>
<thead>
<tr>
<th>When the topic contains a single link:</th>
<th>When a topic contains multiple links</th>
<th>For a topic with multiple links</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right-click the link icon, and then click <strong>Show in Explorer</strong>.</td>
<td>Click the link icon, point to the link whose target you want to see, and then click <strong>Show in Explorer</strong>.</td>
<td>In the <strong>Manage Links</strong> dialog, select the link and then click <strong>Show</strong>.</td>
</tr>
</tbody>
</table>
**Show target files, folders, or versions in Mindjet Files**

When a link points to an item (map topic, file, folder, or version) in Mindjet Files, you can show the link's target in the Mindjet Files window.

<table>
<thead>
<tr>
<th>When the topic contains a single link:</th>
<th>When a topic contains multiple links</th>
<th>For a topic with multiple links</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right-click the link icon, and then click <strong>Show in Mindjet Files</strong>.</td>
<td>Click the link icon, point to the link whose target you want to see, and then click <strong>Show in Mindjet Files</strong>.</td>
<td>In the <strong>Manage Links</strong> dialog, select the link and then click <strong>Show</strong>.</td>
</tr>
</tbody>
</table>
**Attach Files**

When you attach a document to your map:

- The document content is stored as part of the map file.
- The documents go along when you move the map to a new location or distribute it to coworkers.
- You can attach several documents to a single topic.

**READ HINT**

A map with many attached files can be quite large. To reduce map size, use links to point to the documents instead of attaching them. Links do not increase the size of your map significantly, and the files can be modified outside of MindManager.

- You can attach an existing file or a new, empty document that you create on the fly.
- The Map Index task pane Elements list displays all the topics on your map that contain attachments and links.

**READ NOTE**

If your system administrator has disabled the Attach Files feature, you will not see the Attach Files command on the ribbon. When you open a map that contains attached files, you will see the “disabled attachment” icons.

---

**Attach a file to a topic**

1. Click the topic where you want to attach the document(s).
2. Do one of the following:
   - **Right-click**, then click **Attach Files**.
   - **On the** **Home tab** or **Insert tab**, click **Attach Files**.
   - **In Outline View** click the **Attached files** column for the topic.
   - **Press** **CTRL+SHIFT+H**

3. Then, either:
   - **Click** **Attach one or more existing files** and browse
   - **Click** **Create new empty document as attached file**. Enter the name of the new document to be stored inside the map (without an extension). Then, choose an extension. The document’s type
Add Content to Maps

4. Click **Edit attached file now** if you want to open the document(s) immediately to view or edit them.

   ! READ NOTE

   The attached document must be associated with an application on your system that can view and edit it.

5. Click **OK**. If you chose to edit the document now, edit the document in the application, then save it. You'll return to MindManager.

   An icon 🖨️ appears on the map to show that the topic has an attached file. Topics with multiple attached files show this icon: 🖨️. You can hide or show these using the Show / Hide command.

   ✓ READ HINT

   Use the **Power Select** and **Power Filter** commands to select and filter topics that have attached files. Type your drop-down text here.

**Attach an existing file**

If you attach an existing file:

- The document is copied and stored as part of the map file, and the original document it is no longer used.
- You can delete the original once it's been attached without affecting the attached file in your map.
- You need to modify the attached document using MindManager. Modifying the original document will not affect the attached file.
- If you keep and modify the original, the changes will show in MindManager only if you remove the attached file and then re-attach it.

✓ CREATE ATTACH FILES WITH DRAG AND DROP

From Windows Explorer or other external source (like the desktop, or a dialog with a file list), drag the filename, and then drop it into the map. Choose to add the item as an attached file.

**Create a new attached file**

- If you attach a new document, you can enter its content immediately, or wait until later.
- The document exists only as an attached file inside the map file—to make it accessible outside of MindManager, you need to save it as a separate file on disk.
Export Maps with Attached files

**NOTE:** You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options.

- When you export your map to Word, you can choose whether to export the attached files. The attached documents are saved in individual files in the export folder, and a link to the attached file is inserted in the Word document at the appropriate location.
- Attached files are ignored when you export your map or tasks to Project and PowerPoint.
- Attached files are included when you Save as Web Pages. The attached files are saved in individual files in the export folder, and a link to the attached file is inserted on the Web pages at the appropriate location.
- Attached files are included, unchanged (they remain as part of the map) when you send a packaged map to a mail recipient or use the Pack and Go command to package the map in an archive.
- Attached files are not included when you share your map, or send or export your map as an HTML5 map or OPML file.

Open attached files

You can view an attached document in either the standalone application or within the built-in MindManager Browser pane.

Open an attach file in the associated application

- Click on the topic's attached file icon and click **Open: filename** where *filename* is the document you want to open. (If there is only one attached file it opens automatically.)

  ![READ NOTE](image)

  You cannot open an attachment unless it is associated with an application installed on your system that can edit and view this file type.

Open an attached file using the built-in Browser

You can open attached files of supported file types (Microsoft Office documents, text files, and any other files, such as HTML files) in the MindManager Browser pane. Attachments that cannot be viewed by the Browser will open outside of MindManager in their native applications.

To use the built-in browser for attached files:

- On the **Home** tab or **Insert** tab, click the **Attach Files** arrow, and then click **Use Built-in Browser for Attached Files**.

  ![READ NOTE](image)
Override the Use Built-in Browser setting for Attached Files option

To open an attached file outside of MindManager when the **Use Built-in Browser for Attached Files** option is enabled:

- For a topic with a single attach file: right-click the attach file icon.
  - For a topic with multiple attached files, click the attached file icon.
- Click **Open Outside MindManager: filename** (where `filename` is the document you want to open), or, press CTRL while you click the attachment icon.

Open a page displayed in the MindManager Browser in its default application

If want to open an attached file that is displayed in the Browser externally in its native application, click the **Open Outside MindManager** button on the Browser toolbar.

Edit an attached file

You cannot edit an attachment in the built-in Browser. Instead, open and edit it in the associated application, then refresh the Browser to reflect the edits.

Edit an attached file that is displayed in the Browser:

- Click the **Open Outside MindManager** button on the Browser toolbar.
- Edit and save the document in the native application.
- Click the **Refresh** button to update the attached file displayed in the MindManager Browser.

Manage attached files

The Manage Files shows a list of all the documents attached to a topic and gives you commands to manage the attachments.

1. Do **one** of the following:
   - In Map View click the topic's attached files icon , and then click **Manage files**.
   - Or In Outline View click the **Attached files** column for the topic.

2. In the Manage Attached files dialog select one or more documents from the list. You can now do any of the following:
   - **Open** Opens the selected attached file for viewing or editing.
   - **Save as** Saves the attached document in a separate file on disk so that it is accessible outside of MindManager. This external file has no connection to the attached file—it can be edited independently and will not change the content of the attachment.
Add: Adds a new attached file on the topic

 Rename: Renames the selected attached file

 Remove: Removes the document from the list of attached files

Copy or move attached files by dragging in Map view

- To copy, drag the attached file to the new topic or into another application.
- To move, press CTRL while dragging.
- You can drag single and multiple attached files.
- For targets that already contain attached files, the dragged attachment is added to the topic's list of attached files.
Topic Notes

Map topics are most readable when they are kept short. For topics that need more detail, you can add topic notes to include larger amounts of information as formatted text and graphics. This additional documentation is especially useful for maps that you will export to a Word document.

More about Notes:

- You can enter the text or copy it from another document.
- The Notes icon appears automatically on a topic when a note is attached — next to the topic in Map View, and in the Notes column in Outline View.
- You can choose to show or hide these icons in Map View by using the Show / Hide command. To hide them in Outline View, right-click on the column header and clear the Notes option.
- For information on printing Notes, see Print.

READ HINT

You can use the Power Select and Power Filter commands to select and filter topics that have notes attached.

If you want to add complex documents to your map, you can create a link to the document from the topic, or you can include the document in the map file by using an attachment.

The Map Index task pane Elements list displays all the topics on your map that contain Notes.

Enter notes text

Enter notes by typing the content in, or paste text from another note or document. Select an automatic font for all the notes on your map by modifying the map theme before you begin.

1. Select the topic.
2. Do one of the following:
   - Right-click, then click Notes.
   - On the Home tab or Insert tab, in the Topic Elements group, click Notes.
   - In Outline View, click in the Notes column.
   - Press CTRL+T or F11.
3. The **Topic Notes** window opens. (You can control its size and orientation.

Note that it has its own toolbar.

Choose to display this window vertically or horizontally by default using one of the following methods:

- Right-click on the window then click **Window Placement**.
- On the **Home** tab in the **Topics Elements** group, click the **Notes** arrow and select the orientation.
- Set the **Notes window placement** in the MindManager **Notes** options.

To expand the vertical window, click the bigger button on the top toolbar. You can also drag the left-hand or top border to see more of the note and less of the map.

4. Enter your text. Text will automatically be formatted using the default font.

**Read Hint**

If you want to insert line breaks in your text, press SHIFT+ENTER where you want the line break.

A quick way to add notes is to paste them from another application:

Copy the text, place your cursor inside the Notes window, and then use the **Paste** command, or press CTRL+V.

To control the default font that is used for notes on this map:

- On the **Design** tab, click **Notes Theme**.

This setting is saved as part of the **map theme**.

5. Use the commands in the **Topic Notes** toolbar to format the text and add other elements: Notes can contain tables, links, images and date / time data.

**Read Hint**

The Format Painter on this toolbar works in the same way as the **Format Painter** on the ribbon. You must use this toolbar to format the notes text. The formatting options on the ribbon are for formatting the map only.
6. When you are finished entering the note you can:

| Close the Topic Notes window by clicking **x Close** on the **Topic Notes** Toolbar. | Or | Click on the map to leave the Topic Notes window open. It will show the notes content for each topic you select. | Or | Click **Next topic** (or press SHIFT+PG DN) or **Previous topic** (or press SHIFT+PG UP) on the Topic Notes toolbar to move through the map. |

A Notes icon 📖 will appear on the topic to show that it contains a note. You can show or hide these icons using the Show / Hide command.

*Add images in notes*

You can add pictures to your text notes from the MindManager image Library or from a file.

- Images from files can be embedded and saved with the map document or referenced via a link to keep the map file small.
- Initially, the image is added at its original size but you can re-size it and edit it as needed.
- Images added to a note can be saved on disk.

*Add an image from the Library to the note*

1. Click inside the topic note at the location for the image.
2. On the **Status Bar**, click the **Task Panes** button 📦, then click **Library**.
3. At the bottom of the **Library** task pane, click **Images**, then locate the image you want to add.
4. Drag the image into the note. (Note: If you just click the image it will be added to the current topic, not to the note.)

*Add an image from a file to the note*

1. Click inside the topic note at the location for the image.
2. Click **Image** 📎 on the **Topic Notes** toolbar.
3. Locate the image you want to add.
4. Do one of the following:

   To *embed* the image in the notes (include the image in the map file) click **Insert**.  
   Or  
   To *link* to the image (include only a reference to the image file in the map file), click the arrow next to **Insert** and click **Insert and Link**.

Not sure which to do? See *Linking vs. embedding images* 📖.
Linking vs embedding images

You may prefer to link to images from files rather than embedding them because:

- You want to keep the map file size small
- The image will change and you want to see only the current version of it

If you choose the **Insert and Link** option when inserting an image, you will link to the source image. Each time you view the notes, the image is updated.

Update the image manually

1. Right-click the image.
2. Click **Refresh Image**.

Choose to link or embed an image after its been added

1. Right-click the image.
2. Click **Format Image**.
3. Enable or disable the **Link to image** option as desired.
4. If you enable the link, enter (browse to) the file's location.

⚠️ If the source file is moved or deleted, you will see a broken image link displayed rather than the image. Use steps above to correct the file location for an image that's been moved.

You have the option to embed linked images when exporting the map to Word using the MindManager **Notes** options settings for **Export conversions (RTF)** That way, the image is included with the exported files, rather than just including a reference.

Paths for Linked Images

Relative or absolute paths for linked images are stored according to the **Properties - Summary** options for links, but you can change this setting for individual images.

Set the path for an individual image to relative or absolute

1. Right-click the image.
2. Click **Format Image**. You'll see the default path setting (relative or absolute.)
3. Set the **Store this image path as:** option as desired.
4. Click **Defaults** to change the default path setting for all subsequently added images.

See **Images** for more information on the types of images you can import.

❌ READ HINT

You can add a link to an image, for example, a button image that you can click on to jump to a web page or to begin an email.

You can paste an image that you've cut or copied from another application into a note. Click inside the note where you want to place the image and press CTRL+V or, on the **Home** tab, in the **Clipboard** group, click **Paste**.
Edit an image in a topic note

Resize an image

1. Click the image in the note.
2. Drag the handles to change the image size.
   ✓ READ HINT
   Hold CTRL while you drag the corner handles to maintain the image's aspect ratio.
   If you know that you want the image to be a specific size (in pixels), right-click the image, then click Format Image and specify the dimensions.
3. You can return the image to its original size - right click, and then click Reset Image Size.

Edit linked images in place

You can edit linked images in place. Images you dragged to the note from files inserted into the Library cannot be edited in place: Instead you must edit the Library image or edit the original file externally, and then re-add the modified image.
1. Right-click the image, and then click Open Source.
2. The image is opened in its associated application so you can edit it.
   ! READ NOTE
   The associated application must be capable of editing in order for you to change the image.
3. After editing, save the modified image in the editing application.
4. In MindManager, right-click the image, and then click Refresh Image to see the updated picture.
   The image is also re-read (and updated) automatically each time the topic is selected.

Save an image from a topic note

You can save any image included in a note, regardless of its origin, to a file.
1. Right-click the image.
2. Click Save image, and enter the file's location and name. You will have a choice of several formats in the Save as type list that depend on the image's original format.
3. Click Save.

Add links in notes

Adding a link in a note is similar to adding a link to a map topic.
1. In the Topic Notes window, click where you want to add the link (if you select some text or an image, the selected objects will be "hot" and will open the link when clicked.)
2. Do one of the following:
3. Define the link. See Links for additional information on the various types of links you can add.

*Add the content of a topic as a note*

1. Drag the topic containing the text that you want to add as a note over the topic to which you're adding the note.
2. When the menu button ✈️ appears, release the mouse button, and choose **Drop as Notes**.

⚠️ **READ NOTE**

You can only add topics that contain only text to another topic as a note.

*Add tables to notes*

1. In the **Topic Notes** window, click the location for the table.
2. Click **Insert Table** 📋 on the **Topic Notes Toolbar**.
3. Click **Insert**, then click **Table**.
4. Enter the number of rows and columns to use. Click **Remember dimensions for new tables** to set the default size for the next table you add.
5. Click **OK**.
6. An empty table appears in the note. Enter the contents of the table cell by cell.
Edit a table

Show the Table toolbar

The table toolbar contains special commands for configuring and formatting the table.

- On the Topic Notes Toolbar, click the Table arrow \( \text{Table} \), and then click Show Table Toolbar.

Select table cells

Use these commands to select table elements for editing or formatting. You must click inside the table to make these commands available.

<table>
<thead>
<tr>
<th>To select</th>
<th>Table menu</th>
<th>...or click</th>
</tr>
</thead>
<tbody>
<tr>
<td>Table</td>
<td>Select - Table</td>
<td>Table's upper left corner</td>
</tr>
<tr>
<td>Column</td>
<td>Select - Column</td>
<td>Top of column</td>
</tr>
<tr>
<td>Row</td>
<td>Select - Row</td>
<td>Left end of row</td>
</tr>
<tr>
<td>Cell</td>
<td>Select - Cell</td>
<td>Click and drag to highlight cell</td>
</tr>
</tbody>
</table>

Insert, delete, or merge table elements

<table>
<thead>
<tr>
<th>Option</th>
<th>Table menu</th>
<th>Table Toolbar</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert columns</td>
<td>Insert - column to left</td>
<td>( \text{Insert} )</td>
</tr>
<tr>
<td></td>
<td>Insert - column to right</td>
<td>( \text{Insert} )</td>
</tr>
<tr>
<td>Insert rows</td>
<td>Insert - Row above</td>
<td>( \text{Insert} )</td>

<td>n/a</td>
</tr>
</tbody>
</table>
Table formatting and layout

You can edit and format the text within a table in the same way as ordinary notes text. There are additional ways to select different table areas. Options for table formatting and layout are available in the Table menu and by using the Table Toolbar.

Format table text

1. Select the area that you want to format - a cell, row, column or the whole table.
2. Click a formatting command on the Topic Notes toolbar.

Format table borders and shading; table and column widths

You can format the borders and shading for the whole table or for individual cells. You can also set the table and column widths for Web export.

1. Click inside the table.
2. Do one of the following:
   - Right-click on the table, and then click Format Table.
   - On the Notes Toolbar, click the Insert Table arrow, and then click Format Table.
   - Click Table Properties on the Topic Notes window Table toolbar.
3. Use the Borders and Shading tab options to change the table's appearance. Use the Table and Column Width tab options to set properties for exported tables.

Move, remove, or copy notes

You can copy topic notes between topics that already have notes.

Cut, copy, and paste note

1. Click a topic's notes icon to open the Topic Notes window.
2. Right-click the source topic's notes icon.
3. Click Cut Notes (to move) or Copy Notes (to copy).
4. Right-click the destination topic.
5. Point to Paste, then click Paste Notes. If the topic already has a note, you will be offered the option to either replace it or append the new note.

⚠️ READ HINT

You can also paste the note into another application using the application’s Paste command.

**Copy or move notes by dragging in Map view**

- To copy, drag the notes to a new topic, or into another application.
- To move, press CTRL while dragging.
- If you drop notes onto a topic that already has notes, the existing notes are overwritten.

**Remove a single note**

- Right-click on the topic’s notes icon, and then click Remove Notes.

**Remove the notes from several topics**

Select the topics, and then do one of the following:

- Right-click the notes icon on one of them, then click Remove Notes.
- On the Home tab, click the Delete button, and then select Notes.
- Press CTRL+K.

⚠️ READ HINT

You can temporarily hide the notes icons in Map View using the Show / Hide command.

**Other options**

Open the Notes window, then use the Cut, Copy, and Paste commands on the Home tab, in the Clipboard group to:

- Move or copy all or part of a topic note
- Paste text from other applications into the note.
- Paste text from notes into topics. See Edit topic text and Create topics by pasting text for details.
Adding Visual Information

Markers

You can code individual topics with distinctive visual elements called markers—icons, tags (text annotations), font colors and fill colors—each with an associated name or meaning.

Markers are used:

- to impart specific meaning to topics or classify them into groups;
- as criteria for topic selection and filtering;
- to organize topics in a list, categorized by the markers they include in the Map Index pane;

A markers list:

- contains a set of map markers organized into groups;
- is unique to each map;
- is displayed in the Map Index pane—apply these markers to map topics from the list or by using commands on the ribbon's Home and Insert tab;
- can be managed using commands in the Map Index pane.

More about markers:

- You are not restricted to the markers shown in theMarkers list—you can code topics with other icons from the Library, and they are added to the map's Markers list dynamically.
- You can create new marker groups on-the-fly, and add your own custom icons to the Library.
- Special task icons (priorities, task progress) appear automatically on topics when task information is assigned, and are also dynamically added to the markers list if they are not already included.
- Add a Legend topic to your map from the drop-down in Map Index pane Markers list that shows the icon, font, and fill color markers used on the map, and their meanings.
- To re-use markers on another map, copy and paste marker groups.
- Save, apply, and manage entire marker lists from the Theme Organizer drop-down on the Design tab. Select Marker Lists.

Resources are:
Add Content to Maps

- special tags that are also tied to a topic's Task Info;
- applied from the Markers list in the Map Index pane, from the Task Info pane, and from the ribbon's Task tab. (See Task Info for more information on using resources.)

⚠️ READ NOTE
Outline View displays only icon and font color markers.

Add icons to topics

You can add or remove icons on topics using the Icons command from the Home or Insert tab Markers group, or from the Markers list in the Map Index task pane.

1. Select a topic or topics that you want to assign the icon to.
2. On the Home or Insert tab, in the Markers group, click Icons.
3. In the icon picker select the icon you want to assign to the topic. Once an icon is added, you can rest your pointer over it to see its meaning. You can change its meaning in the Map Index pane Markers list.
4. If you don't see the icon you want to add, click More Icons... to open the Library task pane. Click the icon in the Library task pane. The icon is automatically added to the General icons group in the Markers list.

✅ READ HINT
To apply an icon from the Map Index task pane, select the target topic(s), and then click the icon in the Markers list.
Task-related icons are also available from the Tasks group on the Task tab.

If the icon you choose was already assigned to the selected topic, it is removed. This works as a toggle, so a second click on the icon will add it to all selected topics.

✅ READ HINT
To copy an icon from one topic to another, drag it to the new topic.
To move it press CTRL as you drag and drop.

You can assign an icon to multiple topics, and each topic can have more than one icon, but you may not repeat the same icon on a topic.
Some icons are mutually exclusive: Only one icon from that marker group can be added to a topic. If you attempt to add a second icon from the same group, it replaces the first icon. You can change this attribute for a group. You can add multiple icons to a topic from a group that is non-exclusive.

✅ READ HINT
To display larger icons on the map, use MindManager's Visual Effects option.
Change an icon on a topic

Once you have added an icon to a topic, you can change it in several ways. Do one of the following:

<table>
<thead>
<tr>
<th>For icons that belong to a named group, click the icon to cycle to the next icon in the group.</th>
<th>Right-click the icon, then click Replace With to select a different icon.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right-click the icon, then click More Icons to replace the current icon with a new icon from the Library. The new icon gets added to the General icons group in the Markers list.</td>
<td>Right-click the icon, then click Edit Marker Name to change the icon's meaning. This new meaning will show in the Markers list in the Map Index task pane, and in the map legend.</td>
</tr>
</tbody>
</table>

Icon shortcuts

Priority icons:
- CTRL+SHIFT+1 for Priority 1, CTRL+SHIFT+2 for Priority 2 etc.
- CTRL+SHIFT+0 removes all Priorities from the topic.

Progress icons:
- ALT+CTRL+P adds a progress icon, then cycles forward through the icons
- ALT+CTRL+SHIFT+P cycles in reverse.
- Only available Progress icons (the ones currently in the Markers list) are used.

To assign shortcut keys to other icons, in the Library pane, right-click the icon, then click Shortcut key in the context menu.

Copy, move or remove an icon marker on a topic

- To copy an icon, drag it to a new topic, then drop it.
- To move the icon, press CTRL as you drag and drop.
- To remove an icon, right-click on the topic's icon, and then click Remove or Remove All Icons to remove all the topic's icons.

Read Hint

ALT+CTRL+0 removes all icon markers; CTRL +SHIFT+0 removes all Priority icons.

If you prefer not to display icons but want to avoid removing them you can hide them using the Show / Hide command in Map View. In Outline View you can turn off the icons column - right-click the column header and clear the Icons checkbox.
Exporting icons - notes ▼

If you export your map to web pages an icon legend pop-up is automatically included in the export. You can disable this by using the options to customize your web pages. The Icon Legend pop-up option is in the Show section on the Advanced Settings page.

Task icons - notes ▼

The task icons (priority, progress) are dynamically linked to the task information assigned to the topic. These work in a special way:

- If you assign task info to a topic, the corresponding task icons appear automatically on the map and are added to the Markers List (if they were not already included) in the appropriate group.
- If you add a task icon (priority, task progress) from the icon picker the corresponding task info is automatically assigned to the topic.

You can "cycle" the priority and progress task icons just like other icons:

- Click on the icon to change it to the next available priority or task progress setting.

You can tailor the Markers list in the Map Index pane to contain only those priorities and progress settings you want to use. For example, you can include just the 0%, 25%, 50% and 100% icons in the list rather than the whole continuum of settings. In this way you can avoid cycling through all the unused icons.

Add tags to topics

A tag is a brief notation that gives information (such as a topic category) by displaying the text below the topic. You add or remove tags on topics using the Tags ribbon command or from the Map Index pane.

1. Select a topic or topics.
2. On the Home or Insert tab, in the Markers group, click Tags.

A resource is a special kind of tag that is used as Task Info. Resources can also be added using the Resources command in the Task tab's Tasks group, and from the Task Info pane.

3. In the tag picker click the group and then the tag(s) you want to assign to the topic.

Some tags are mutually exclusive: Only one tag from that group can be added to a topic. If you attempt to add a second tag from the same group, it replaces the first tag. You can change this attribute.

If you are assigning a tag to multiple topics and the tag you choose was already assigned to any
of the selected topics, it is removed. This works as a toggle, so a second click on the tag will add it to all selected topics.

To add or remove a tag using the Map Index task pane, select the target topic(s), and then click the tag in the Markers list.

4. If you don’t see the tag you want to use, you can add a new tag or a new tag group.

You can also right-click a tag to remove it from the topic.

To show or hide the group names in the tags on your map, on the View tab, in the Detail group, click Show / Hide and select or clear the Tag Group Names checkbox.

Each topic can have more than one tag, but you may not repeat the same tag more than once on a single topic.

**Change a tag on a topic**

- Right-click the tag, click the tag group name, and then select the tag you want to display.
- You can only select one tag from a group that is mutually exclusive (see above).
- You can display tags from more than one group on a topic.

**Copy or move tags**

You can copy or move tags from one topic to another.

1. On a topic, click the tag you want to copy and drag it to the destination topic.

   **Read Hint**

   Hold CTRL as you drag to move, instead of copy, the tag.

2. Release the mouse button to drop the tag on the topic.

If you drag a tag to a topic that already has tags assigned, the new tag will be added to the tag list.

**Remove a tag**

- To remove all tags, right-click the topic, click Tags, and then click Remove All Tags.
- To remove a specific tag, right-click on it, and then click Remove.

**Read Hint**

If you prefer not to display tags but want to avoid removing them you can hide them using the Show / Hide command. Tags are not displayed in Outline View.
Exporting tags - notes

Tags are exported to HTML5 maps and Word documents. They are not exported to PowerPoint slides or Project files, and are not included when you print from outline view or save as a plain text or HTML outline.

For Word export you can choose whether to include the tags in your document in the General Map Properties tab.

Find or filter topics with specific markers

Find topics with a specific icon or tag

1. On a topic, right-click the icon or tag you want to find.
2. Click Find Next or Find Previous to select the next or previous topic that uses this icon or tag.

Show or hide topics with a specific marker

1. On a topic or in the Map Index pane Markers list, right-click the marker you want to match.
2. Click Quick Filter, and then click Show Topics With This Marker or Hide Topics With This Marker.

Filtering is cumulative. Topics that are already hidden remain hidden when you apply a new filter.

To show all the topics again do one of the following:

- Right click the filter indicator at lower-left, and then click Remove Filter.
- On the View tab, in the Filter group, click Remove Filter.
- Right-click the map's workbook tab, then click Remove Filter.

To use additional criteria for filtering, use the Power Filter option.

Add font and fill color markers to topics

Font colors and fill colors can also be used as markers. That is, you can associate a specific meaning with the colors you use in your map. You can initially apply font and fill colors using the map formatting commands. These colors will appear in the Markers list in the Map Index task pane. From there, you can apply them to topics, and optionally assign a meaning to them.

If you name font or fill colors in the Markers list, they will appear in the map legend. Named font and fill colors remain in the list of markers even if they are not used on the map. You can change the markers' colors and meanings using commands in the Markers list.
If you do not assign a meaning to the color, it will disappear from the Markers list if it is no longer used on the map.

**Add a legend to the map**

The legend displays the marker list groups, and all the named markers within those groups. The legend is added as a subtopic of the currently selected topic, or as a main topic if no topic is selected.

1. Select the topic to attach the legend to.

   **Read Hint**
   
   The legend is added as a new main topic or subtopic by default, but you can detach it to make it a floating topic.

2. Do one of the following:

   On the Status Bar, click the Task Panes button, click Index, and then click the Markers button.

   Or

   On the Home or Insert tab, in the Markers group, click the Map Index button, then click Markers.

3. Click , then click Insert legend into map.

4. Choose whether to show all markers in the legend, or only those that are used on the map.

   A new set of topics will be added to the map showing the marker groups and meanings. Icons in the General icons group will not appear in the legend. If you want to include these icons in the legend you must name them (they move into the Single Icons group when you name them).

   **Read Note**
   
   The legend is not automatically updated, so if you rearrange the markers in the list or rename the groups the legend will not be current. To get a current legend, delete the existing legend topic and then add the legend again from the Markers list.
Work with objects

There are a variety of object types that you can use to increase and enhance a map’s visual information. You can add shapes and images to a map’s background, text boxes to give extra information, and Smart Shapes to flowcharts when there are several concurrent processes. You can also add relationships to show how topics are connected and boundaries to group topics and subtopics.

You can modify these objects to best suit the look of your map. Depending on the object type, you can adjust transparency, fill, outline, and layering. You can also lock, align, flip and rotate objects, as well as control how they are layered. You can also quickly and accurately align two objects by dragging. To simplify working in complex maps, objects can be grouped and renamed.

Select objects

Selecting multiple objects allows you to simultaneously apply formatting to them all, lock several objects, align and distribute them, and more.

Do one of the following:

- Hold down **Ctrl**, and click the objects’ edges. When selection handles appear around an object, it is selected.
- Hold down your left mouse button and drag over the objects. The object must be completely in the selection area to be selected.
- On the **Insert** tab, in the **Objects** group, click the Shapes pull down, and click **Select All**.

Format objects
You can modify an object’s outline, fill, and transparency. To format your map quickly, you can select multiple objects when you apply formatting. You can use the Format Painter to transfer formatting between objects.

**Format an object’s outline**

You can format the color, weight, and pattern of outlines for shapes, swim lanes, boundaries, and relationships.

1. Right-click the object that supports outline formatting, and click **Format Object**.
   For boundaries, click **Format Boundary**, and for relationships, click **Format Relationships**.
   You can modify the outline of multiple objects simultaneously by first selecting them.
2. Do any of the following:
   - Open the **Color** drop down menu, and choose a line color.
   - Open the **Weight** drop down menu, and choose a line weight.
   - Open the **Pattern** drop down menu, and choose a line pattern.
3. Click **Apply**.

**Format an object’s fill**

You can format the fill color, weight, and pattern of outlines for circles, rectangles, swim lanes, and boundaries.

1. Right-click an object that supports fill formatting, and click **Format Object**.
   For boundaries, click **Format Boundary**.
2. In the Fill area, open the **Color** drop down menu, and choose a fill color.

**READ NOTE**

You can modify the fill color of a single swim lane, funnel segment, or table cell by right-clicking it, choosing **Format Object**, and choosing a color and setting its transparency in the **Format Background Object** dialog.

You cannot adjust the fill color of relationship lines or horizontal or vertical divider lines.

**Format an object’s transparency**

You can adjust the transparency of rectangles, circles, images, swim lanes, and boundaries.

Do one of the following:

1. Right-click an object that supports transparency, and click **Format Object**.
   For boundaries, click **Format Boundary**.
2. Set a transparency level in the **Transparency** box.

**READ HINT**

You can also right-click rectangles, circles, images, and swim lanes, then click **Transparency**, and choose a transparency level.
You cannot adjust the transparency of relationship lines, horizontal or vertical divider lines, or text boxes.

**Resize objects**

You can resize shapes, images, and swim lanes.

Do one of the following:

- Right-click the object, click **Format Object**, type the desired number of pixels in the **Height** or **Width** boxes.
- Click the object to display handles, and drag the handles.

**Layer objects**

You can layer some types of objects, including shapes, images, swim lanes and text boxes, and control the stacking order of the objects.

You can place one object on top of another and reorder the stacking position.

**Send an object back in the stacking order**

Right-click an object, and do one of the following:

- Click **Send Backward** to position it the object immediately beneath it.
- Click **Send to Bottom** to move it beneath all other objects.

**Bring an object forward in the stacking order**

Right-click an object, and do one of the following:

- Click **Bring Forward** to position it over the object immediately above it.
- Click **Bring to Top** to move it above all other objects.

**Lock objects**

You can lock shapes, swim lanes, text boxes, and images in position on a map background, which prevents you from moving them.

**Lock an object**

- Right-click an object and click **Lock**.

**Unlock an object**

1. On the **Home** tab or **Insert** tab, click the **Map Index** pull down, and click **Elements**.
2. In the Map Index Elements pane, right-click the object, and click **Unlock**.
MindManager User Guide

**Align and distribute objects**

You can align two or more shapes, swim lanes, text boxes, and images with each other. The object that has selection handles is the object to which other selected objects are aligned.

You can also distribute three or more shapes, swim lanes, text boxes, and images, evenly spacing the center points of the objects along a horizontal or vertical axis.

**Align objects**

1. Select two or more objects.
2. Do one of the following:

   **Interactively align objects**
   1. Select the object that you want to align with another object.
   2. Drag the object until a green alignment guide is displayed.
      The guide displays when the edges of the objects are aligned.
   3. Release the mouse button.
      You can disable the alignment guide by clicking File tab > Options > Edit, and disabling the Use Alignment Helper when dragging objects.

   **Distribute objects**
   1. Select three or more objects.
   2. Do one of the following:

   **Group objects**

   You can group shapes, swim lanes, funnels, tables, text boxes, and images in position on a map background. When you group two or more objects, they are treated as a single unit but retain their individual attributes. Grouping lets you move, resize, rotate, flip, and align all the objects within the group at the same time.

   **Group objects**

   1. Select two or more objects.
   2. Do one of the following:
On the **Format** tab, in the **Layout** group, click the **Group** pull down, and select a grouping option.  
Or  
Right click, click **Group**, and select a grouping option.

**Ungroup objects**

1. Select one or more objects within an object grouping.  
2. Do **one** of the following:
   
   On the **Format** tab, in the **Layout** group, click the **Group** pull down, and select an ungrouping option.  
Or  
Right click, click **Group**, and select an ungrouping option.

**Flip and rotate objects**

You can rotate and flip objects or an object group.  

**Flip objects**

Right-click an object or group of objects, and do **one** of the following:

- Click **Flip Vertical**.  
Or  
Click **Flip Horizontal**.

**Rotate objects**

Do **one** of the following:

- Click an object to display corner rotation handles, and drag the handle.  
- Right-click an object, click **Format Object**, and enter the number of degrees to rotate the object in the **Rotate** box.  
- Right-click an object or group of objects, and click either **Rotate 45° counter clockwise** or **Rotate 45° clockwise**.

**Rename objects**

You can rename objects.

1. On the **Home** tab, click the **Map Index** pull down, and click **Elements**.  
2. Double-click **Objects** to view a list of objects in the current map.  
3. Click the object to rename.  
   When an object is selected in the Map Index pane, it is highlighted in the map.  
4. Right-click, and click **Rename**.  
5. Type a name for the object.  
   Object names cannot exceed 40 characters.
Format boundaries and relationships

When you select a boundary or a relationship, the formatting options on the Home tab are enabled, and you can use these to change the object's appearance. See Boundaries and Relationships for information on further modifying these objects.

Additional options are available when you right-click on the object, and then click Format Boundary or Format Relationship (or double-click, or select the object and press ALT+ENTER).

1. Select the formatting options you want to use.
2. To see how the boundary or relationship will look, click Apply.
3. Click the Map Theme button if you wish to save these settings as formatting defaults for this map, or re-set the object's formatting to the default from the theme.
Sometimes a relationship exists between two (or more) topics, and you want to illustrate this on your map. You can add a relationship line that connects two topics, and label it if you wish. The default formatting for the line is determined by the map's theme settings.

Special types of relationships are used to indicate Task dependencies.

**READ NOTE**

Relationships are not shown in Outline View.

### Connect topics with a relationship

1. On the Home or Insert tab, in the Objects group, click Relationship.
2. When you point to the first topic the cursor changes to the relationship cursor.
3. Click the first topic, and then click the second.
4. The relationship line appears to link the two topics.

Relationship lines follow an optimal path by default because their Auto Adjust attribute is enabled. If you move one or both of the topics connected by a relationship, the line will automatically adjust to follow an optimal path between the topics.

**READ HINT**

You can also add a relationship by dragging one topic over another, releasing the mouse button when the menu button appears, and choosing Insert Relationship.

### Add a callout (label) to the relationship

1. Right-click the relationship line.
2. Click Insert Callout.
3. When the generic callout appears select it to enter your text.

**READ HINT**

You can set an option to prompt for a callout for each relationship you add in the MindManager Edit options to auto-insert relationship callouts.

### Viewing partial relationships
When the topic at one end of the relationship is visible but the other is not (on a collapsed branch, hidden by a filter, or on a different slide) you will see a partial relationship on the visible topic. When you point to the partial relationship, a hint appears that shows the name of the related topic.

**Read Hint**

You can also see the name of a related topic that is scrolled off-screen by pointing to the visible end of the relationship.

If the related topic is not visible because it is on a collapsed branch, you can show it by double-clicking the partial relationship arrow. Related topics that are not visible because they are hidden by a filter or by the Show Branch Alone command, or on a different slide will not be shown.

If you prefer not to see partial relationships, you can disable this option in the Relationship pull-down (uncheck Show Collapsed Relationships) or by using the MindManager View options.

**Read Hint**

You can use the Show / Hide command to temporarily hide relationships on your map.

**Modify the relationship**

- **Change where the relationship line connects with a topic**
  - Select the relationship, then drag the blue dot to another part of the topic.

- **Connect to a different topic**
  - Select the relationship, then drag the blue dot to another topic.

- **Change the shape of the line**
  - Select the relationship, then drag the square yellow handles to enlarge or reshape the line.
If you re-shape the line, the **Auto Adjust** option is automatically disabled. If you want the line to return to its optimal path you can re-enable the **Auto Adjust** option in the relationship’s shortcut menu and in the **Format Relationship** dialog (described below).

**Remove a relationship**

1. Right-click the relationship line.
2. Click **Delete Relationship**.

**READ HINT**

Use the **Show / Hide** command to temporarily hide relationships.

**Format the relationship**

**Add a label to the line**

1. Click on the relationship line to reveal the label field between the yellow diamonds:

   ![Label](image)

2. Click the word "Label" and begin typing.

**Change the line’s style and color**

1. Select the relationship line(s).
2. On the **Format** tab, use commands in the **Object Format** group to change the **Line style**, and **Line Color**.

**More formatting options**

1. Do **one** of the following:

   | Right-click the relationship line, and then click **Format Relationship**. | Or | Select the relationship(s). On the **Home** or **Insert** tab, click the **Relationship** pull-down, then click **Format Relationship**. | Or | Double-click the relationship. |

2. Choose the desired attributes for the line(s).
3. Click **Map Theme** if you wish to save all the relationship’s format settings as the automatic formatting for relationships on this map, or reset it to the default formatting from the map theme.

**READ HINT**

To reverse the end styles quickly, right-click the relationship line, then click **Flip**.
**Jump to relationship topics**

Once you have added a relationship you can quickly jump to the topic at either end of the line. This is especially useful on large maps where the relationship spans a long distance.

1. Right-click the relationship line.
2. Click **Jump to** `{ topicname }`. A **Jump To** command is displayed for the topics at both ends of the arrow.
Boundaries come in two basic types:

- **Grouping boundaries** can be used to emphasize the relationships between topics and subtopics with an outline surrounding an area on a map with your choice of line type and an optional fill color.

- **Summary boundaries** can be used to reduce a set of subtopics into a single summary topic and then allow this topic to grow again.

You can add boundaries within boundaries. The default boundary formatting is determined by the theme settings. Boundaries are not shown in Outline View.

### Create a boundary

1. Select the topic whose subtopics you want to group with the boundary.
2. On the **Home** or **Insert** tab, in the **Objects** group, click the **Boundary** arrow, and then click the boundary type.

### Add a summary topic to a boundary

1. Select the boundary (a blue box shows it is selected).
2. Do **one** of the following:

   - On the **Home** tab, in the **Add topics** group, click **Callout**.
   - On the boundary’s blue frame, click the **Add Topic** tab.
   - Right-click the boundary and click **Insert Summary Topic**.

You can expand the summary topic into a new topic tree by adding subtopics to it.
Format a boundary

When you select a boundary, a blue box appears to show that it is selected. Then you can change the boundary's formatting.

1. Select the boundary.
2. On the Format tab, use the Object Format group commands to change the Fill Color, Line Color, and Line type.

More formatting options

1. Do one of the following:
   - Right-click the boundary, and then click Format Boundary.
   - Select the boundary. On the Home or Insert tab, click the Boundary arrow, then click Format Boundary.
   - Double-click the boundary.
2. Choose the desired attributes for the boundary.
3. Click Map Theme if you wish to save all the boundary's format settings as the default formatting for boundaries on this map, or reset the boundary to the default formatting from the map’s theme.

Copy or remove a boundary

Copy a boundary

To create a boundary of the same style as an existing boundary you can copy the boundary to a new topic tree.

- Right-click the boundary and use the Cut, Copy, and Paste commands in the Home tab Clipboard group.

Remove a boundary

- Right-click the boundary, and then click Delete Boundary.
Shapes

You can insert a shape in a map background to enhance the look of your map. You can insert rectangles, rounded rectangles, triangles (isosceles and right angle), circles, right arrows, text bubbles, explosions, stars (4-point and 5-point), divider lines (horizontal and vertical), and brackets. You can modify a shape's outline, fill, and transparency. For more information about formatting shapes, see Work with objects.

Shapes, except for brackets and dividers, are topic containers by default. Topic containers allow you to group floating topics or flowchart topics. When you reposition the shape, any contained flowchart or floating topics also move. For more information, see Group floating topics or flowchart topics.

Insert shapes

1. On the Insert tab, in the Objects group, click Shapes.
2. Choose a shape type.
3. Click in the map where you want to add the shape, and drag.

You can insert a shape with the identical formatting of the last shape of that type that you inserted by choosing that shape option from the Shapes pull down and clicking on the canvas.
Images can be...
- either attached to a topic as a standard file or thumbnail, or added as new topics or as floating images that can be moved freely
- sourced from professionally designed map images from the MindManager Library
- your own image sourced from a file in your computer
- .bmp, emf, wmf, gif, jpeg, pcx or png formats (transparent 256 color PNGs are also supported)
- used for the map background
- added to text notes.

Commands for organizing and editing your images can be used from the Library task pane.

**Read Hint**

The **Map Index** task pane Elements list displays all the topics on your map that contain images.

**Read Note**

Images are not displayed in Outline View or on the Gantt chart.

---

**Add images from the Library**

**Open the Library**

Do one of the following:

| On the Status Bar, click the Task Panes button, then click Library. | Or | On the Insert tab, in the Objects group, click the Image arrow, and then click Insert From Library. |

**Attach the image to a topic**

1. Select the topic(s).
2. In the Library, click the Images category, then navigate to the image you want to add.
3. Click the image preview.
4. Re-size or reposition the image within the topic space if desired.

**Read Hint**
To search for an image enter a keyword in the Enter image keyword box at the top of the Library pane, and then click Search. The search results appear in the Library pane preview window, and you can select the image from there. You can customize image keywords.

Create a floating image

- Drag the image from the Library to the map.

A blue visual cue means the image will be added as a subtopic of the highlighted topic.

When a topic over which you drag an image displays a grid, the image will be attached to the topic. Note that you can then drag the image to position it within the topic space in one of 4 locations.

No cue (image is in an empty space) means the image gets added as a floating image. Press SHIFT as you drag to prevent the image from becoming attached to a topic as you move it.

Add images from files

You can attach images or thumbnails of images to topics or create a floating image.

Attach the image to a topic

1. Do one of the following:

- Right-click a topic, click Image, and then click Standard Image From File.

- Select a topic. On the Insert tab, in the Objects group, click the Image arrow, and then click Standard Image From File.

2. Navigate to the image file and click Insert.

3. Re-size or reposition the image within the topic space if desired.

   Read Hint

MindManager automatically re-sizes images from files so that their largest dimension does not exceed 480 pixels. After import you can re-size the image as desired.

Attach a thumbnail of an image to a topic

1. Do one of the following:

- Right-click a topic, click Image, and then click Thumbnail Image from File.

- Select a topic. On the Insert tab, in the Objects group, click the Image arrow, and then click Thumbnail Image from File.

2. Navigate to the image file and click Insert.

   You can preview the image by clicking the magnifier button on the thumbnail.
Re-size or reposition the image within the topic space if desired.

**Create a floating image**

1. Do one of the following:
   - Right-click the map background, click **Insert Floating Image**, then click **From File**.
   - Click the map background. On the **Insert** tab, in the **Objects** group, click the **Image** arrow, and then click **Standard Image From File**. Click the location for the floating image.

2. Navigate to the image file and click **Insert**.

3. You can drag the image to fine-tune its location. Press SHIFT as you drag to prevent the image from becoming attached to a topic as you move it.

   - **READ NOTE**
   - **READ HINT**

   You can choose whether to show images on your map using the **Show / Hide** command.

   You can **add your own images from files** to the MindManager Library for re-use.

   Images are not shown in Outline view.

**Paste images from other applications**

- You can paste existing images from other applications into map topics or paste other items (like tables from Word, data ranges from Excel, etc.) as an image.

- The **Paste Special** command indicates which formats are available.

  - **READ HINT**

  You can set options that determine the sizing for images are copied and pasted.

**Paste an existing image**

1. Copy the image from the original application (usually CTRL+C).

2. Click where you want the image pasted:
   - If you select a topic, the pasted image becomes a new subtopic.
   - If you click inside the topic text, the image will be pasted inside (attached to) the topic.
   - If you click on the map background, the image is pasted as a new floating topic.

3. Press CTRL+V.

**Paste an item as an image**

1. Copy the item from the source application (usually CTRL+C).

2. Click where you want the image pasted:
• If you select a topic, the image can be pasted inside, or as a new subtopic.
• If you click on the map background, the image is pasted as a new floating topic.

3. On the Home tab, in the Clipboard group, click the Paste arrow, and then click Paste Special.

4. The Paste Special As dialog shows the available formats for the copied item. Click Picture or Bitmap, and then:
   • Click Paste to create a subtopic or floating image.
   • Click Paste Inside to attach the image to the selected topic.

   ! Read Note
   The Picture and Bitmap selections will only display if the item is available in that format.

Resize, move, copy, and delete images

Resize an image

1. Select the topic, then click the image. Handles appear to show that it is selected.
2. Drag the handles to re-size the image: corner handles maintain the aspect ratio, side handles allow stretching.

   ✓ Read Hint
   To return the image to its original size, right-click, and then click Reset Image Size.

Move a floating image

• Floating images can be moved freely around the map using drag and drop (hold down the Shift key as you drag to prevent the image from becoming attached).
• Attached Images stay inside their associated topics, but they can be copied or moved to another topic, or to become a floating image.

   ✓ Read Hint
   If you want images to snap to a grid during drag and drop, enable the Snap to grid in the Edit options.

Move or copy an attached image

1. Select the topic with the image you want to move or copy.
2. Click the image. Handles will appear to show that it is selected.
3. Drag the image to a new location.
4. Visual cues appear to show how the image will be added: green shows it will be attached to the topic (top, bottom, left or right positions), red indicates that it will become a new topic; no cue means the image will become a floating image.
5. Drop the image at the new location.
**Read Hint**

Hold CTRL as you drop to copy (instead of move) the image.
Hold SHIFT as you drop to create a floating image at any location.
You can set options that control the sizing of images that you copy and move.

**Delete an image**

1. Select the topic, then click the image. Handles appear to show that it is selected.
2. Press DELETE.

**Read Hint**

You can temporarily hide images in Map View using the **Show / Hide** command.

**Export maps with images**

- Bitmaps are converted to metafiles when they are exported to a Word document. You can switch off this behavior using the MindManager options settings (**File > Options**) for **Notes - Export conversions (RTF)**.
- Only PNG, GIF and JPG images are supported when you export an HTML5 map.
## Text boxes

You can use text boxes to add additional information to a map.

### What do you want to do?

- Insert text boxes
- Format a text box

### Insert text boxes

1. On the **Insert** tab, in the **Objects** group, click **Text Box**.
2. Click in the map where you want the text box, and type.

### Format a text box

1. Click the text box, then right-click it.
2. Click **Format Object**
3. In the Format Font dialog, do **any** of the following.
   - Choose a font from the **Font** list.
   - Choose a font style from the **Font style** box.
   - Choose a font size from the **Size** box.
   - Choose a font color from the **Font color** box.
   - Underline the text by clicking the **Underline** box.
   - Strikethrough the text by clicking the **Strikethrough** box.

### Read Note

Text boxes remain visible when filters are applied to topics.

### Read Hint

You can see how the text will look in the **Preview** box.
Smart Shapes

What do you want to do?

- Insert swim lanes
- Change the number of swim lanes
- Resize all swim lanes
- Add titles to swim lanes
- Insert funnels
- Resize all swim lanes
- Change the number of funnel segments
- Resize all funnel segments
- Insert a table
- Change the number of table rows or columns
- Resize a single swim lane, funnel segment, or table row or column
- Resize a single swim lane, funnel segment, or table row or column
- Name a single swim lane, funnel segment, or table cell
- Change the fill color of a single swim lane, funnel segment, or table cell

You can use Smart Shapes, such as swim lanes, funnels, or tables, in a flowchart or map to distinguish responsibility for sub-processes of a process. Swim lanes and funnels can be arranged either horizontally or vertically. For more information about formatting Smart Shapes, see Work with objects.

Smart Shapes are topic containers by default. Topic containers allow you to group floating topics or flowchart topics. When you reposition it, any contained flowchart or floating topics also move. For more information, see Group floating topics or flowchart topics.
**Insert swim lanes**

1. On the Insert tab, in the **Objects** group, click the **Smart Shapes** arrow, and then click either **Horizontal Swim Lanes** or **Vertical Swim Lanes**.
2. Then, click the number of swim lanes to insert.
3. Click in the map where you want the swim lanes, hold down the mouse button, and drag. The more you drag, the bigger the swim lanes are.

**READ HINT**

You can insert swim lanes with the identical formatting of the last swim lanes that you inserted by choosing an option from the Swim Lanes pull down and clicking on the canvas.

**Change the number of swim lanes**

Do **one** of the following:

| Right-click the swim lane, click **Format Object**, type the desired number of lanes in the **Lanes** box, and click **Apply**. | or | Right-click the swim lane, click **Lanes**, and choose the number of lanes you want. |

**READ HINTS**

You can also insert a single lane within an existing swim lane by right-clicking and choosing **Insert Lane to the Right** or **Insert Lane to the Left** for horizontal swim lanes, or **Insert Lane Above** or **Insert Lane Below** for vertical swim lanes.

You can delete a single swim lane by right-clicking it and choosing **Delete Lane**.

**Resize all swim lanes**

Do **one** of the following:

| Right-click the swim lanes, click **Format Object**, and type the desired number of pixels in the **Height** and **Width** boxes. | or | Click the swim lanes to display handles, and drag the handles. |

**READ HINT**

See **Layer objects** for information about layering swim lanes and other objects.

**Add titles to swim lanes**

1. Right-click a swim lane, and click **Show Titles**.

   A check mark next to the command indicates that swim lanes are enabled.
2. Do any of the following:

- Click a swim lane, then right-click and choose **Format Object**.
- Double-click a swim lane title.

The Format Object dialog opens.

3. Do any of the following:

- Click the **Location** drop-down menu, and choose where the titles display.
- Click the **Alignment** drop-down menu, and choose how the title text is aligned relative to its swim lane.
- Click the **Orientation** drop-down menu, and choose whether to display the title text vertically or horizontally.

**Insert funnels**

1. On the **Insert** tab, in the **Objects** group, click the **Smart Shapes** arrow, and then click either **Horizontal Funnel** or **Vertical Funnel**.
2. Then, click the number of funnel segments to insert.
3. Click in the map where you want the funnel, hold down the mouse button, and drag.
   The more you drag, the greater the size of the funnel.

**Change the number of funnel segments**

Do one of the following:

Right-click the funnel, click **Format Object**, type the desired number of segments in the **Lanes** box, and click **Apply**.

or

Right-click the funnel, click **Lanes**, and choose the number of segments you want.

**Read Hints**

You can also insert a segment within an existing funnel by right-clicking a funnel segment and choosing **Insert Segment to the Right** or **Insert Segment to the Left** for horizontal funnels, or **Insert Segment Above** or **Insert Segment Below** for vertical funnels.

You can delete a funnel segment by right-clicking it and choosing **Delete Segment**.

**Resize all funnel segments**

Do one of the following:
Right-click the funnel, click **Format Object**, and type the desired number of pixels in the **Height** and **Width** boxes.

---

**Insert a table**

1. On the **Insert** tab, in the **Objects** group, click the **Smart Shapes** arrow, and then click **Table**.
2. Then, click the number of rows and columns to insert.
   - If you click **More** and drag, you can interactively set the number of rows and columns.
3. Click in the map where you want the table, hold down the mouse button, and drag.
   - The more you drag, the greater the size of the table

**Change the number of table rows or columns**

1. Right-click the table, and click **Format Object**.
2. Enter a number in the **Rows** and **Columns** boxes.
3. Click **Apply**

**Read Hint**

You can also insert rows or columns by selecting a table cell, right-clicking, and choosing **Insert Row Above**, **Insert Row Below**, **Insert Column to the Left**, or **Insert Column to the Right**.

**Delete a table row or column**

1. Click a cell in the row or column to delete.
2. Right-click, and choose one of the following:
   - **Delete Row**
   - **Delete Column**

**Resize a single swim lane, funnel segment, or table row or column**

1. Hover over the border of a swim lane, funnel segment, or table row or column until the cursor becomes a double arrow.
2. Drag the border to resize the swim lane.

**Name a single swim lane, funnel segment, or table cell**

1. Right-click a single swim lane, funnel segment, or table cell, and choose **Rename**.
2. Type a name in the Name box.

*Change the fill color of a single swim lane, funnel segment, or table cell*

1. Right-click the swim lane, funnel segment, or table cell.
2. Choose Format Object.
3. Choose a fill color from the Color drop-down menu.
   - You can adjust the fill color transparency by moving the Transparency slider.
Capture content and reuse in maps

MindManager Snap lets you capture content on the web and your desktop. You can also use MindManager Snap within the MindManager Go app on Android and iOS devices. The content that you capture is sent to the Snap Queue in MindManager for reuse in a map. You can collect content even when MindManager isn't running.

Capture content

**Capture content on your desktop**

1. **Do one** of the following to launch MindManager Snap:
   - **Press CTRL+ALT+M.**
   - **Or** From the Windows taskbar, click *Start* > *Programs* > *MindManager 2020* > *MindManager Snap*.

2. **Select one** of the following in the *Select type of Snap* drop-down:
   - **Text** — type or select text to appear in the topic in the *Topic Text* field.
   - **Bookmark** — copy a URL in your browser and paste it in the *Topic Link* field.
     You can also type the text to appear in the topic in the *Topic Text* field.
   - **Attachment** — click *Select File* to navigate to the file, then click *Open*.
     You can also type the text to appear in the topic in the *Topic Text* field.
     You can also add a topic note in the *Topic Note* field.

3. **Click Send.**
   - **To capture more content, click Send More.**
   - **To see what is in your Snap Queue, click View Queue.**

**Capture content in a Chrome browser**

You must have the MindManager Snap Chrome extension installed, which you can get from the Chrome Web Store.

1. **Do one** of the following:
   - To capture a URL, right-click anywhere on the web page, and choose *MindManager Snap* > *Send bookmark to MindManager*. The web page URL appears in the *Topic Link* field.
   - You can also type the text to appear in the topic in the *Topic Text* field.
To capture an image, right-click the image, and choose **MindManager Snap > Send image to MindManager**.
You can also type the text to appear in the topic in the **Topic Text** field.

To capture text on a web page, select it, then choose **MindManager Snap > Send selection to MindManager**. The selected text appears in the **Topic Text** field.

You can also add a topic note in the **Topic Note** field.

2. Click **Send**.

**Capture content on a mobile device**

You must have the MindManager Go for iOS or Android installed on your mobile device.

1. In the Snap area, do any of the following:
   - To capture an image from your camera, tap 📸.
   - To capture an image stored on your device, tap 📎 and select the image.
   - To send a text note, tap 📝 and type the text.

2. Click **Send**.

**Use captured content in a map**

You can insert a piece of captured content in a map as a new topic or insert it into an existing topic. After a piece of captured content has been used in a map, it is moved from the Snap Queue to the Trash. You can restore content from the Trash for reuse.

**Insert captured content in a map**

1. Do **one** of the following:
   - On the **Insert** tab, click **MindManager Snap**.
   - Or On the **Status Bar**, click the **Task Panes** button 📊, then click **Snap Queue**.

2. In the **Snap Queue** pane, drag a piece of captured content onto the map to insert it as a new topic.
   
   When you drag a piece of captured content onto an existing topic, it is inserted as a sub-topic.

**Clear the Snap Queue**

1. In the Snap Queue pane, click the **Options** button 🔄.
2. Click **Trash All**.
Restore used content

1. In the Snap Queue pane, click the Open Trash button.

2. Click the Restore button corresponding to the piece of content you want to reuse.

☐ READ HINT
You can choose to always keep all captured content in the Snap Queue by clicking the Options button, and setting the Sent to Trash after dropping into map box to Off.
Working with Tasks

**Task Info**

Tasks are map topics that have been assigned Task Info such as Start and Due dates, Durations, Progress, Resources, etc. This information is displayed on the topic using icons and text.

Tasks on your map can come from a variety of sources. You can:

- enter them manually
- add tasks from or send tasks to Outlook, SharePoint, or the Mindjet Tasks online. These task topics are linked to, and stay in sync with their associated external tasks.
- import them from Project.

**MINDJET ONLINE FEATURES**

You can include topics on your map that are linked to Mindjet Tasks online that you can edit and manage from any Mindjet application. See Using Mindjet Tasks for more information.

**NOTE:** You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options.

Use the *Task Info* task pane to define or edit the information for tasks. Some Task Info can be edited interactively on the map itself. You can copy or move this information to another topic.

**READ HINT**

Use the *Map Index* pane to see tasks grouped by their markers (progress, priority, resource, etc.)

You can use these additional Task Management features:

- The *Task Management* options are used in concert with the map's Task Info to automatically calculate and update Task Info on the map. Calculated Task Info is shown with special markers, and it cannot be modified.
- Use *Gantt Pro* for an alternate view of your tasks. You can also add tasks and modify some Task Info in this view.
- Use the *Resource Planning* options to create and manage resources and analyze their utilization.

**READ NOTE**
You cannot change Task Info that is read-only (displayed with grayed text). All Task Info is read-only for roll-up tasks, and some Task Info may be read-only on task topics linked to tasks in Outlook, SharePoint and Mindjet Tasks.

---

**Define Task Info**

1. Select the topic(s) you want to define the Task Info for.
2. Do **one** of the following:
   - **On the Task tab, click** Show Task Pane.  
   - Or **On the Status Bar, click the Task Panes button**, then click Task Info.
3. In the Task Info pane define any or all of the Task Info for the selected topics.
   - Pick a **Priority**. A corresponding icon is automatically added to the topics on the map.  
     (You can also do this by clicking Priority on the Task tab.)
   - Select the task's **Progress**. A corresponding icon is automatically added to the topics.  
     (You can also do this by clicking Progress on the Task tab.)
   - Pick the **Start date** and **Due date** from the calendars, or select the month, day or year and enter a new value.

   You can only assign Start and Due dates that are marked as [workdays](https://www.mindjet.com/mindmanager/images/tooltip.png) on the Task Info Calendar or Map Calendar.

   The date format is determined by your system's Control Panel - Regional and Language options. If you change the date display format there you should re-start MindManager.

   You can quickly assign standard Task Info to a topic using the Add Task Info button on the ribbon Tasks tab. Clicking Add Task Info will assign a Start Date and Due Date (today), a duration of 1 day, and will add a Progress icon (first available in the Markers list) to the task.

   - Enter the **Duration** in hours, days, weeks or months (this is the number of days the task is expected to require). The default duration for a task with a Start date and Due date is 1 day. Changing the Duration will change the Due date
   - To enter an **Effort** value for the task, follow [these steps](https://www.mindjet.com/mindmanager/images/tooltip.png).

     1. To display the Effort field in the Task Info pane, click the File tab, click Options, click Task Info, and select Show Effort field.
2. The Effort defaults to the task Duration. The Effort defaults to the task Duration. You can enter a new value for Effort in the Task Info pane. Effort is shown below the topic with other task info, and is rolled up if you use the Task Management Roll up option.

- Choose Resources from the drop-down list, or enter new resources. If you have multiple entries in the Resources field, separate the names with a comma or a semicolon.

**READ HINT**

Semi-colon delimited resource fields are only available in MindManager 14.1 or later; for maps created using earlier versions of MindManager, you will need to recreate the Task Resource list using MindManager 14.1.

**READ NOTE**

If your resource names include commas (for example Smith, Jason, and Jones, Ashley), separate each resource with a semicolon: Smith, Jason; Jones, Ashley.

You can load resources (assign a %) for tasks. See Manage tasks for more information.

- Select Milestone to denote a milestone task. A Milestone task needs only either a Start Date or Due Date. If it has both, the Due Date is used for Gantt display. Other Task Info on milestone tasks is ignored by the Task and Resource Management functions. (You can also do this by clicking Milestone on the Task tab.)

**READ HINT**

You can change any existing task to a milestone by setting its Duration to 0.

- Category information can be entered by using Tags. The Category information for maps from previous versions of MindManager is automatically converted to Tags.

Priority and Progress are shown by icons. Other Task Info is displayed in a small window below the topic text.

**READ HINT**

If you add task icons (Priority, Progress) to topics, the corresponding Task Info is automatically assigned to the topic.

You can use the Power Select and Power Filter commands to select or filter topics based on their Task Info settings.

*Define Task Cost*

1. Select the topic(s) you want to define the task cost for.

2. Do one of the following:
3. In the **Costs** area of the Task Info pane, define the **General** cost, which is a fixed cost associated with the selected topics or tasks.

The **Resource** box displays the cost of resources assigned to the task based on assigned resources’ effort for the task and standard rates for those resources. For information about assigning resources to a task, see **Define Task Info**. For information about setting the rate for resources, see **Assign Costs to Resources**.

**READ HINT**

You can also view a breakdown of a task’s costs by hovering over the task in the map.

**READ NOTE**

To change the currency symbol and formatting for costs, click **Calendar & task** options in the **Task Info** pane. Then, choose an option from the **Currency Symbol** drop-down menu.

You can hide task costs by clicking **Calendar & task** options in the **Task Info** pane and disabling the **Show Costs** check box.

The **Total** box displays the sum of the **General** and **Resource** costs for the selected task.

To display a total for all tasks in a project, select the central topic, and enable the **Roll up Costs** check box. You can also display costs for part of a project by selecting a topic and enabling the **Roll up Costs** check box. All costs in tasks in that branch are displayed in the selected task.

---

**Define workdays and holidays**

The default set of workdays (the Map Calendar) for each new map is defined by the Task Info options calendar. You can define a different set of workdays for the current map using the **Calendar & Display** option in the Task Info pane.

You can only assign Task Info Start and Due dates marked as workdays (and not marked as holidays) on the Map Calendar.

The Map Calendar lets you specify which days should be considered as work days only for this map. These settings override the workdays already defined in the Task Info options. You select which days of the week are used as workdays, and add or remove holidays (non-work days) from the calendar using the **Add** and **Delete** functions.
Define display options

Under Task Management, in the Task Info panel, you can not only change the calendar options for the current map, but also decide how to highlight topics depending on the status of their tasks, and choose whether to display specific features.

Select the appropriate checkboxes and assign a color if you want to highlight topics whenever the status of a task is:

- past due
- at risk
- completed

You can choose to highlight roll-up branches only.

Lastly, you may choose whether critical paths display or not in map view, and even whether task info should display at all—with the option to show years or not.

<table>
<thead>
<tr>
<th>READ NOTE</th>
</tr>
</thead>
</table>

By default, task info display is enabled, and the topics highlighted are those including tasks that are past-due (pink), at-risk (yellow), and completed (green).

Edit Task Info

You can edit the Task Info in several ways:

<table>
<thead>
<tr>
<th>Select the topic and make changes in the Task Info pane.</th>
<th>Or</th>
<th>Select the task on the Gantt Pro and then make your changes in the task list of the Gantt Pro.</th>
<th>Or</th>
<th>Edit Task Info directly on the topic:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Click the Start date and select a new date from the pop-up calendar. Click the Due date or Duration to select a new Due date. If multiple topics are selected the new date is applied or added to all selected topics.</td>
</tr>
</tbody>
</table>
When you edit the Task Info on topics that are linked to tasks in Outlook, SharePoint, or the Mindjet Tasks online, the properties on their associated linked tasks are also changed.

Copy or move Task Info

You can copy text-based Task Info (start date, due date, duration, effort, resources) from one topic to another.

1. On a topic, click the Task Info item you want to copy and drag it to the destination topic.

   ![Selecting a Task Info item]

   **READ HINT**

   Hold CTRL as you drag to move, instead of copy, the Task Info.

2. Release the mouse button to drop the Task Info on the topic.

   If you drag a start date or due date to a topic that already has this info assigned, the date will change.
   If you drag a resource to a topic that already has one or more resources assigned, the new resource will be added to the list.

Task highlighting rules

Under Task Management in the Task Info panel, you can change the calendar options for the current map, decide how to highlight topics depending on the status of their tasks, and choose whether to display specific features. By default, task info display is enabled, and the topics highlighted are those including tasks that are past-due (pink), at-risk (yellow), and completed (green), but you can disable task highlighting and edit how task highlighting displays. Task highlighting is governed by Smart Rules settings. For more information, see Smart Rules.

You can choose to display task information, such as start and end dates, number of workdays, and whether the task is a milestone. By default, task information is displayed. For long projects, you can include the year in task dates.

A task is considered at risk if its elapsed duration, expressed as a percentage, is greater than the At-Risk Threshold and its Progress (both expressed as percentages). By default, the at-risk threshold is 75%, but you can modify it.

Disable a task highlighting rule

1. If the Task Info pane isn’t open, click **Show Task Pane** on the Task tab.
2. Click **Calendar & display options**.
3. In the Calendar & Display Options dialog, click **View Task Highlighting Rules**.
4. Select the task highlighting rule, and move the **Enable** slider to the left.
Edit a task highlighting rule

1. If the Task Info pane isn’t open, click **Show Task Pane** on the Task tab.
2. Click **Calendar & display options**.
3. In the Calendar & Display Options dialog, click **View Task Highlighting Rules**.
4. Select the task highlighting rule, click **Edit**.
5. In the Edit Rule dialog, modify any of the Effect settings.

Define at-risk tasks

1. If the Task Info pane isn’t open, click **Show Task Pane** on the Task tab.
2. Click **Calendar & display options**.
3. Specify the at-risk threshold in the **Threshold** box.

Remove or hide Task Info

**Remove Task Info**
To remove all Task Info text from a topic, right-click the topic and then click **Remove All Task Info Text Items**. (This does not remove Progress and Priority icons.)
To remove a specific Task Info item, right-click the item and then click **Remove** {item name}.
If you remove the Start Date or Due Date, the Duration is also removed.

**Show or Hide Task Info in Map View**
In the Task Info pane, select or clear the **Show Task Info** checkbox.
In the Task Info pane, select or clear **Show Years in Task Info** to choose whether to include the year in the displayed dates.
Use the **Show / Hide** command to show or hide Task Info on your map.

Move a project

To shift an entire set of project tasks forward—or push them all back—while retaining all task timing relationships:

1. In the **Task** tab **Advanced Scheduling** group, click **Move Project**.
2. The Move Project dialog opens, with the project's current start date displayed
   - Edit the date.
   - Check the Move Milestones box to include project milestones in the project move. (To retain the current dates for all milestones, uncheck the box.)
3. Click **OK**.
All tasks in the project will shift earlier or later depending on the new start date.
MindManager's Topic Alert feature allows you to set a reminder to open and work with a specific map at an assigned date and time. This is similar to Microsoft Outlook's appointment and reminder features that you may already use. By assigning a reminder alert to a map topic, you can easily be ready to review a map, edit a map, or prepare for an appointment. You can set an alert for any map topic.

The topic alert reminders are managed by a special MindManager Reminder service that runs in the background whether or not you are using MindManager.

You can synchronize your topic alerts with Microsoft Outlook which allows you to view and edit them from either application. This means that MindManager's alerts will always reflect changes made to them in Outlook and vice versa.

You do not need to have MindManager running to receive topic alerts. The service is always available, even when you are not using MindManager. Their behavior is controlled by the Topic Alert options.

Create a topic alert

1. **Important:** Save the map if you have not already done so. You cannot create a topic alert unless the map has been saved.
2. Select the topic
3. On the **Insert** tab, in the **Topic Elements** group, click **Alert**.
4. Enter the reminder information:
   - **Subject:** Defaults to the topic text. Choose from one of the commonly-used subjects or enter your own subject
   - **Date and Time:** When the event is happening or the task is due.
   - **Reminder:** How far in advance of the due date and time you want the reminder to appear (up to 2 weeks)
   - **Add Recurrence:** choose whether to repeat this reminder and how often.
5. Click **OK**.
MindManager User Guide

The Topic Alert icon 🔄 appears on the topic. Use the Show / Hide command to hide or show these icons on the map.

Respond to topic alerts

When a topic alert reminder comes due you'll see the MindManager Topic Alert dialog appear. It shows the subject of the current alert, the associated map, the time for the reminder and whether the alert is current or past due. You'll also see any past reminders that you have not responded to. The current alert is selected, but you can respond to any of the listed alerts using the following actions:

- **Open Map** Opens the map that is the source of the alert and selects the associated topic. The Topic Alert dialog stays open so you can do one of the following actions.
- **Dismiss** means that you have acknowledged the reminder, and you don't want to see it again.
- **Snooze** lets you defer the reminder for the time you select under Snooze.

View, modify, or remove topic alerts

**READ HINT**

To modify or remove any topic alert on the current map, right-click the Alert icon 🔄, and then click **Modify** or **Delete**.

To see the list of all your current alerts:

- On the Insert tab, in the Topic Elements group, click the Alert arrow, and then click Manage Topic Alerts.

The current topic alerts display their status in the "Due in" column:

- When a topic alert is shown as overdue its reminder period has already passed but it was never opened or dismissed. To clear these alerts you can use the Delete command (described below), or you can modify them to re-set their due date and time.
- Other Topic Alerts show when they are due. (You have the option to see only today's Topic Alerts.)
- **Bold** text means the Topic Alert is active (within its reminder period).

Once you select a Topic Alert in the list you can click:

- **Modify** the Topic Alert to change the reminder info.
- **Open Map** to view the map that is the source of the Topic Alert.
- **Delete** to remove the alert from your system.

**READ NOTE**

Note that this is the only way to delete a reminder. Deleting the topic or map that is the source of the reminder does not remove the alert from the notification system.

Sync topic alerts with Outlook
To sync your topic alerts with Outlook you must have the Topic alerts sync option enabled (it is enabled by default). With this option enabled, the reminders you have created using MindManager will appear as appointments in Outlook as well. You'll see them on your Outlook calendar and you can view and modify the reminder information just as you would any other appointment.

If you prefer to create topic alerts without creating corresponding Outlook appointments, disable the Topic Alert sync option.

⚠️ **Read Note**

While topic alerts can be viewed and edited in Outlook, they can only be created and removed using MindManager.

**View or modify a topic alert appointment in Outlook**

1. Open the appointment:
   - Right-click the topic alert icon 📰, and then click **Open Microsoft Outlook Appointment**.
2. Modify the information. Your changes will be automatically reflected in the Topic Alert.

⚠️ **Read Note**

A reminder is not set in Outlook for any appointments created from topic alerts. The reminders you receive will be from the MindManager Topic Alert Service. If you enable Outlook’s reminder feature for any appointment originating as a topic alert you will receive two reminders (one from Outlook’s reminder system and one from MindManager’s) for each Topic Alert.

The topic alert time’s status is not automatically changed in Outlook (it shows as "Free"). You can modify this status in Outlook if desired.
Manage tasks

Tasks on your map can come from a variety of sources: you can enter them manually, link to tasks from Outlook, SharePoint, or Mindjet Tasks online, or import them from Project. Tasks have defined Task Info such as Start Date and Due Date. Workdays available for tasks are defined by the Task Info calendar.

**NOTE:** You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options.

The Task Management options are used in concert with the map's Task Info to allow you to automatically calculate and update task information on the map.

**! READ NOTE**

If you do not see these options, check to see that you have the corresponding add-in installed and enabled.

To automatically calculate the task info for a set of topics, you mark their parent as a roll-up topic. Calculated task info is shown on the parent topic with special markers.

You can show dependencies between tasks in roll-up branches, and specify a dependency type. When you update the task info for the independent task, the dependent task's info is automatically updated if needed, based on the type of dependency.

You can also choose to display at-risk and past-due tasks on rolled-up branches with special fill colors.

**✓ READ HINT**

Use the Map Index pane to see tasks grouped by their markers (progress, priority, resource, etc.)

<table>
<thead>
<tr>
<th>What do you want to do?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mark roll-up topics for task management</td>
</tr>
<tr>
<td>Show at-risk and past-due tasks</td>
</tr>
<tr>
<td>Add a dependency between tasks</td>
</tr>
<tr>
<td>Manage slack time</td>
</tr>
<tr>
<td>Task Management rules</td>
</tr>
</tbody>
</table>

See also:

- Task info
- Create and manage resources

---

**Mark roll-up topics for task management**

When you mark a topic as a roll-up topic, its task info is calculated along the entire branch for all parent topics of tasks up to and including the roll-up topic. (Resources are not used, but are retained when entered.) The calculated task info is shown with special markers.
Add Content to Maps

Roll-ups are disabled for flowcharts.

1. Select a topic that has at least one subtopic.
2. Then do one of the following:
   - On the ribbon Task tab, click Roll Up Task Info.
   - Or In the Task Info pane, click Roll-up task info to here.

Roll-up topics display a special icon  

3. (Optional) Enter task info for the roll-up topic’s subtopics.

   If you mark task topics for roll-up that are linked to tasks in Outlook, SharePoint or the Mindjet Tasks online, they will no longer be synced with their associated external tasks.

Calculated task info

Calculated task info is shown with special markers. You cannot edit this calculated task info, but you can add and edit other task info that has not been calculated (for example, resources).

When task info is calculated:
- All tasks with only a Start date are automatically assigned a Due date that equals the Start date and a Duration of 1 day.
- Task information on topics hidden by a filter are included in the calculation.

Show at-risk and past-due tasks

You can choose to use a specific topic fill color for at-risk and past-due tasks using the Task Management options in the Task Info pane. At risk and past-due indicators are only added to tasks on roll-up branches.

1. In the Task Info pane, click Calendar & task options.
2. Select and choose colors in the Show at-risk as and Show past-due as options.
3. Click View Task Highlighting Rules.
4. Double-click a rule to open the Edit Rule dialog.
5. Choose Fill Color from the Effect drop-down menu, and choose a color.
Tasks are considered at-risk if their current progress indicates that they may not be completed by their Due date. Specifically, if the period between the Start date and Due date is more than 75% elapsed, but the Progress is less than 75%, the task is marked as at-risk.

Tasks are past-due if they are less than 100% complete and their Due date is today or earlier.

Add a dependency between tasks

You indicate a dependency between tasks by linking the topics with a special type of relationship. You can choose the type of dependency using the Task Management options.

The dependency is defined using the order that you click on the tasks. While you create the relationship, think "This task (topic 1) determines that task (topic 2)", and click the tasks in that order. Topic 1 is the determining task. Topic 2 is the dependent task.

 Dependencies can only be created between topics in roll-up branches. Relationships that include a topic that is not in a roll-up branch are treated as normal relationships, and do not influence the task info calculation.

See Task Management rules below for more information.

Add a dependency in Map view

1. Select the determining task (the task that another task depends on), and assign a Start Date, Due Date, and Duration.

 If you do not assign Due Date or Duration, during the dependency calculation, the task is given a Due Date equal to the Start Date and a Duration of 1 day.

2. Select the determining task, press CTRL, and then select one or more tasks. (If you select more than two tasks, multiple dependencies will be created in the order that you selected the tasks).

3. Click a dependency type

 The dependency type is indicated by an icon on the relationship line.

 If you add a dependency to a relationship line that already has a label, the dependency will appear on that label.

If there is not label on the dependency line, you can click the dependency icon to add a label.
Add a dependency in Gantt Pro

1. Right-click the first task, hold down CTRL, and click on one or more Gantt bars for tasks in succession. (If you select more than two tasks, multiple dependencies will be created in the order that you selected the tasks).
2. Right-click and then click Edit Task.
3. Click the Dependency tab and choose a dependency type.

The dependency type is indicated by an icon on the relationship line.
For the purposes of explanation, we refer to the first topic selected (the determining task) as Task 1 and the second topic selected (the dependent task) as Task 2. The Start and Due dates for Task 2 (the dependent task) are adjusted according to its dependency on Task 1.

<table>
<thead>
<tr>
<th>Dependency type</th>
<th>Meaning</th>
<th>Adjustments on update (Only if necessary to abide by the dependency condition.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Finish-to-Start</td>
<td>Task 2 Start date cannot be earlier than Task 1 Due date</td>
<td>The Task 2 Start date is adjusted to be after the Task 1 Due date.</td>
</tr>
<tr>
<td>Start-to-Finish</td>
<td>Task 2 Due date cannot be earlier than Task 1 Start date</td>
<td>The Task 2 Due date is adjusted to be at or after the Task 1 Start date.</td>
</tr>
<tr>
<td>Start-to-Start</td>
<td>Task 2 Start date cannot be earlier than Task 1 Start date</td>
<td>The Task 2 Start date is adjusted to be at or after the Task 1 Start date.</td>
</tr>
<tr>
<td>Finish-to-Finish</td>
<td>Task 2 Due date cannot be earlier than Task 1 Due date</td>
<td>The Task 2 Due date is adjusted to be at or after the Task 1 Due date.</td>
</tr>
</tbody>
</table>

Change a dependency

You can change the dependency type by selecting the dependency line, and then selecting a new dependency type in the Task Info pane.

You can also move the end of a dependency to a different topic by selecting the dependency and dragging the red handle to a new topic.

⚠️ Read Note

Some dependencies are not allowed, and will be deleted if you attempt to create one. See Task Management Rules below for more information.
Manage slack time

Sometimes you may include more time between a task's start and due date than is actually needed for the task's duration. Or, a task may end earlier than planned, affecting other dependent tasks. If you have "slack" time between dependencies, you can remove it.

To remove slack time from all dependencies in a map:

- In the Task tab Advanced Scheduling group, click Remove Slack Time.

To remove slack time from selected dependent tasks in a map:

1. In Gantt Pro, select the topic(s) with tasks where you want to remove the slack time.
2. Click Remove Slack.
3. In the sub-menu, select From Selected and Dependent Tasks.

This will remove slack time from the selected task, and any dependent tasks.

To move the timing of an entire set of tasks, use Move Project.

Format the dependency line

You can change the style of the dependency line in the same way that you format a relationship.

Double-click the line to see the formatting options.

Task Management rules

Roll-up rules

- Calculations include only days marked as workdays (and not holidays) on the Calendar.
- The original Start and Due dates for parent topics along a rollup branch are lost when their Task Info is calculated.
- Progress is only calculated from sub-tasks that have progress assigned. Sub-tasks without Progress values are ignored during the calculation.
- Roll-up is not supported for callout topics.

Dependency rules

- Dependencies can only be created between topics in roll-up branches. Relationships that include a topic that is not in a roll-up branch are treated as normal relationships, and do not influence the task info calculation.
- You can edit the Task Info for the dependent (second) task in a dependency, but you will not be allowed to choose dates that do not abide by the dependency.
- When the Task Info for a topic is read-only (grayed) the task may only be the determining (independent) task in a dependency:
  - Tasks that are in roll-up branches, and whose Task Info is calculated
  - Tasks linked to SharePoint tasks
  - Read-only tasks linked to Outlook tasks
o Dependencies are not allowed that cause circular dependencies. A circular dependency exists when one topic influences the Start or Due date of the other topic in the dependency.

o A dependency will be deleted when it violates the rules for allowed dependencies.
Create and manage task resources

Your map can contain tasks for one or more projects. You can create and define a set of resources that are available to work on the projects on this map, and then assign them to tasks. You can manage resources and their availability, and find under- or overutilized resources using options in the Resources task pane.

Create resources

You can create resources in three ways:

- by entering resources for tasks in the Task Info pane.
- by adding a new resource marker to a topic from the Resource drop down in the Task ribbon.
- by defining them in the Manage Resources dialog.

The last method allows you to specify the availability for the resource. You can add or remove resources and change their Availability in the Manage Resources dialog.

Resources are automatically added to your map when you:

- Import a task from Microsoft Project
- Link to a Microsoft Outlook task
- Link to a SharePoint task
- Link to an online Mindjet Task

**Read Hint**

If you are using MindManager with SharePoint: when a SharePoint site is added to MindManager, the list of SharePoint users for that site is automatically loaded into MindManager's resource list.

**Note:** You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options.
When you create a new resource, the availability for the resource is automatically defined as 40 hours per week. You can change the resource's availability in the Manage Resources dialog in the Resources task pane.

**Enter resources in the Task Info pane**

You can enter a resource for a task in the Task Info pane. If the resource does not already exist, a new resource is automatically created.

**Add a resource marker to a topic**

1. Select one or more topics.
2. On the ribbon's Task tab, in the Tasks group, click the Resources arrow, and then click Add New Resource Marker.
3. Enter the marker name, and then click Add. You can now add another resource Marker or click Close.
4. The new resource is automatically assigned to the selected topic(s).

The availability for the new resource is automatically defined as 40 hours per week. You can change the resource's availability in the Manage Resources dialog in the Resources task pane.

**Define Resources in the Manage Resources dialog**

1. In the Resources task pane, click Manage Resources.
2. In the Manage Resources dialog, enter the Resource name, and Availability (the total number of hours per week that this resource can work).

**Manage Resources**

1. In the Resources task pane, click Manage Resources.
2. In the Manage Resources dialog, you can change a resource's Availability, assign a cost to the resource, add more resources, or delete resources.

See Utilization definitions and calculations for more information on how Availability is used in utilization calculations.

**Assign Costs to Resources**

1. In the Resources task pane, click Manage Resources.
2. In the Manage Resources dialog, choose the time increment to use when managing a resource's cost.
   
   You can choose to calculate costs using hours, days, weeks, or usages.
3. Type the cost per time increment in the **Standard Rate** box.

**Resource utilization**

The Task Info on your map can display shading to alert you to resource utilization issues. You can enable or disable the shading on the map.

Resource utilization is automatically calculated by using Task Duration, Work Hours per Day, resource Availability, and resource Loading for each resource used on the map, on both a daily and weekly basis. To see details about these issues, you can do an analysis to find over- or underutilized resources in the Resources pane.

See [Utilization definitions and calculations](#) for more information on how utilization is calculated.

**Shading for utilization**

You can choose whether to display shading for overutilized and underutilized resources in the map.

- On the **Resources** task pane, in the Visibility section, click **Show Over & Underutilized Resources in Map**.

On the map, task info is shaded:

- Red indicates that one or more resource assigned to the task is overutilized (on either a day or week basis) at some point between the Start and Due date. The overutilized resource names are bolded.
- Tan indicates that all the resources assigned to the task are fully utilized (neither under- nor overutilized).
- Green indicates that one or more resource assigned to the task is underutilized (on either a day or week basis) at some point between the task's Start and Due date, and that no resources are overutilized at any point. (If it is a mixed case of under- and overutilization, overutilization is indicated.) The underutilized resource names are bolded.

**Change the length of a work day**

This is the number of hours per day that you expect all resources to work, and the length of a workday for tasks.

1. On the ribbon's **File** tab, click the **Options** command, and then click **Task Info**.
2. In the **Work hours per day** box, set the number of hours per workday.

Usually, this is set to 8, but you can set it to any value between 1 and 24.
See **Utilization definitions and calculations** for more information on how this is used in utilization calculations.

**Resource loading**
When you assign a resource to a task, the resource loading is automatically set to 100%. This means that you expect the resource to spend the full task duration working on this task: 5 hours for a 5 hour task, 40 hours for a 40 hour task, etc.
If you change the loading to 50%, this means you expect the resource spend half the task duration working on it: 2.5 hours on a 5 hour task, 20 hours for a 40 hour task, etc.

To change the resource loading for a task:
1. On the map, right-click the resource name in the topic's Task Info.
2. In the shortcut menu, click **Edit Resource Effort**, and then select or enter a load value.

   **READ HINT**
   
   The load information is displayed for a task only when it is less than or greater than 100%.

See **Utilization definitions and calculations** for more information on how loading is used in utilization calculations.

**Analyze Utilization**
Analyzing resource utilization can help you to arrange tasks and resources to ensure a successful outcome. Utilization is analyzed over full weeks that occur during the time period you specify, on a weekly and daily basis. It is possible for a resource to be underutilized for a week, but overutilized on specific days, and vice-versa.

1. In the Resources pane, enter the dates for the period you want to analyze in the **From** and **To** fields. If you do not enter dates here, the analysis is conducted for all the weeks that the tasks on the map span.
2. Check the analysis you want to conduct: **Find overutilized resources** or **Find underutilized resources**, or both.
3. Click **Find**.

The results are reported in the bottom part of the pane, and shown with special shading in the map and on the Gantt chart (if it is displayed).

**READ HINT**

For each entry, click to see more details about the analysis for that resource.

To select a task on the map that includes a day with an under- or overutilized resource, click the entry for that day.
Utilization definitions and calculations

Utilization is determined on both a weekly and daily basis for each resource on the map.

**Weekly utilization for a resource**

For each week, we calculate the number of hours the resource must work on tasks. We use the resource loading and duration (within this week) for each task to calculate the work required.

\[
\text{work required for a task} = \text{task duration this week} \times \text{resource loading}
\]

We total the work required for all the tasks to find the work required for the week. We compare the work required this week to the Availability for the resource to arrive at a weekly utilization percentage:

\[
\text{weekly utilization} = \left( \frac{\text{work required this week}}{\text{availability}} \right) \times 100\%
\]

Overutilized resources are those whose utilization is greater than 100%. Their work required for the week exceeds their Availability.

Underutilized resources are those whose utilization is less than 100%. Their work required for the week is less than their Availability.

**Daily resource utilization**

For each day, we calculate the number of hours to be worked for each task. We use the resource loading and duration (for this day) for each task to calculate the work required:

\[
\text{work required for a task} = \text{task duration today} \times \text{resource loading}
\]

We total the work required for all the tasks on that day to find the work required. We compare the work required for the day to the Work Hours per Day to arrive at a daily utilization percentage for the resource:

\[
\text{daily utilization} = \left( \frac{\text{work required for the day}}{\text{work hours per day}} \right) \times 100\%
\]

Overutilized resources are those whose utilization is greater than 100%. Their work required for the day exceeds the Work Hours per Day.

Underutilized resources are those whose utilization is less than 100%. Their work required for the day is less than the Work Hours per Day.
Use Timelines

Create a new timeline

Timeline diagrams display a series of events in chronological order. Typically, they are static diagrams.

MindManager’s Timelines, unlike static diagrams limited by space and function, are dynamic and interactive. Open and close the timeline’s branches, highlight events with metadata like priority or other icon markers, links, notes, attachments, and more.

Use the marker index (Map Index task pane, Markers tab) to navigate your timeline events or apply filters to focus the view on content that meets your desired criteria (e.g. show me all events that have a red flag or that have been marked as priority 1).

Timelines can be used for a variety of purposes:

- **Project Timelines**: Timelines can communicate key project milestones and present a big picture view without all the underlying tasks causing potential clutter or confusion.

- **Strategic or Business Plan Timeline**: Timelines can be an effective way to communicate milestones and goals for a strategy that you are implementing.

- **Product Roadmap**: Product visions are often expressed in the form of a visual roadmap where the future of a product portfolio is laid out and communicated via timelines.

- **Marketing Strategy / Plan**: Highlight your organization’s key marketing events and milestones in a timeline.

- **Company History**: Communicate key events that contributed to the evolution of your organization, products, and services.

**Read Note**

MindManager’s Timelines can be presented in either horizontal or vertical layouts. The scale of the timeline is determined by the user and the context of the diagram being created.
Create a new timeline from a template

You can create a new timeline using one of the templates available in the New Map dialog.

1. Do one of the following:
   - On the Quick Access Toolbar, click the New arrow, and then click From Template.
   - Click the File tab, and then click New.

   The set of built-in map templates is displayed.

2. Double-click the desired timeline template.
   A new timeline opens with a floating topic framed in green called "Timeline."

   ! READ NOTE

   All timeline topics display with quick add tabs, even if you have chosen to hide the Quick Add tabs in Options.

Create a new timeline from an existing timeline

To add to or modify an existing timeline without changing the original, use the Save As command in the File tab or the Quick Access Toolbar to save the timeline under a new name.

Enter topic text

When you create a topic, it appears on the page and is automatically selected.

- Type the text for the new topic and press ENTER.
- To create a line break within the topic text, hold SHIFT and press ENTER.
- These additions to your Central Topic can help set the theme for your map.

   You can add an image to set the tone for the timeline.

   You can also display the revision number and modification date using the Show / Hide command. You can reset the revision number on the Map Properties - Statistics tab.

Understand timelines versus maps

Timelines in MindManager offer a level of flexibility not found in other diagramming programs.

You can switch the layout of a timeline between horizontal and vertical layouts:

1. Go to the Format tab, Object Format group, click the Layout button.
2. Do one of the following:
Use Timelines

Select **Timeline** (horizontal), if your growth direction is vertical. **Or** Select **Vertical Timeline**, if your growth direction is horizontal.

**Read Hint**

The scale of the timeline is determined by the user and the context of the diagram.

With the Layout command, you can also transform a standard map layout into a timeline. From a central or floating topic, you can just choose either a vertical or horizontal growth, using the Layout commands.

Benefits of interactive timelines

- Boil down multiple tasks, events, and timelines into a single document.
- Add metadata to your topics: icons, markers, notes, attachments, links, and more.
- Show/hide branches or apply filters to create alternative views of your data.

**Read Note**

It's possible to have multiple timelines in a single map using floating topics as each timeline's starting point.
Work with timeline topics

A timeline consists of a linear series of topics regrouping various subtopics. In a blank template, the "Timeline" topic is the first topic created, starting point of a chronological suite of main topics. You can then add new topics using the Quick Add tabs, the menu commands, or keystrokes. You can even add topics "free-form," by double clicking the background to create the topics, then dragging and dropping them at the location of your choice.

Add topics using Quick Add tabs

Once you have created a new timeline, it's easy to start building it using the Quick Add tabs, and dragging and dropping the topics into place.

If you are zoomed out to 50% or less, the Quick Add tabs may not be displayed.

Click the Timeline topic, which will display the blue topic frame and one Quick Add tab, either on the right side when the growth direction is horizontal, or at the bottom when the direction is vertical, going downward below the Central Topic.

Now click one of the Quick Add tabs on the first main topic.

There are four Quick Add tabs, one on each side of the topic, two to add Subtopics, one to add a Parent Topic, and one to add a Topic Before.

The Quick Add tabs are placed differently depending on the growth direction of your timeline.

Add topics using menu commands

When you create a timeline, some options on the Home or Insert tab (Add Topics group) change to reflect the unique features available with this type of map

To add topics using the menu: in the Home or Insert tab, Add Topics group, do one of the following:

- Click New Topic to add a topic after the selected topic.
- Click the New Topic arrow and select Add Topic Before to add a topic before the current topic.

Add topics and relationships "free-form"

You can also place topics in the map and change their relationships to one another as needed:
1. Add a topic by double clicking anywhere on the map.

2. Then, add a second one.
   Both are created as Floating Topics, with one Quick Add tab in the growth direction of the timeline, either to the right or downward.

3. Drag one Floating Topic onto the other.
   The topic you dragged becomes a main topic to the first one, now the Central Topic of this new timeline.

When you add this new set of topics to the first timeline, both topics are downgraded: the Central Topic becomes a Main Topic of the initial Timeline topic, and the second one becomes a Subtopic.

Add topics using keystrokes

<table>
<thead>
<tr>
<th>To add:</th>
<th>Keystroke</th>
<th>Mouse</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Topic after</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(to the right or below)</td>
<td>Select a topic and press ENTER</td>
<td>Select a topic and press ENTER</td>
</tr>
<tr>
<td><strong>Topic before</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(to the left or above)</td>
<td>Select a topic and press SHIFT + ENTER</td>
<td>Select a topic and press SHIFT + ENTER</td>
</tr>
<tr>
<td><strong>Subtopic</strong></td>
<td>Select a topic and press INSERT or CTRL + ENTER</td>
<td></td>
</tr>
<tr>
<td><strong>Callout topic</strong></td>
<td>Select a topic and press CTRL+SHIFT+ENTER</td>
<td></td>
</tr>
</tbody>
</table>
| **Floating topic**  | Click the map background and type the topic text at the cue arrow Or Double-click the map background and type directly into the floating topic. You can set options to enable these features.
Edit and format timeline topics

Just as you can edit topics on maps, you can edit timeline topics to replace or modify the text or resize the topic to control how the text wraps. You can also modify and format relationship lines between topics, including adding text labels.

Move or copy timeline topics

Drag and drop timeline topics to a new location, "free-form" restructuring your map. Select the topic(s) and drag them to a new position on the map. A visual cue appears showing where the topic(s) will be added.

- To copy, press CTRL as you drag and drop.
- Callouts remain attached to their parent when they are moved. Use Cut and Paste to move a callout to a different parent.

**READ HINT**

If you want objects to snap to a grid during drag and drop, enable the Snap to grid option. You can use drag and drop to move and copy topics between maps that you are viewing simultaneously.

Delete or remove topics

You can delete a topic (including its callouts).

**READ HINT**

If you only wish to suppress the display of certain map elements or topics, you can use the Show / Hide command and the Filter commands to hide them without removing them from the map.

1. Select the topic(s) and do one of the following:

   - Press the Delete key. The topic(s) (including icons, images and shapes), attached subtopics and callouts will be deleted.
   - On the Home tab, click the Delete button, and then select Topic.

Timeline layouts

You can use the Layout pull-down menu in the Design tab to convert any timeline topic into a regular topic with the selected layout, effectively combining timeline and map layouts in one visual display.

1. Select the topic(s).
2. Click the Layout pull-down arrow, and select a layout from the list: Radial Map, Right Map, Tree, Split Tree, Org Chart, Up Org Chart, Split Org Chart, Timeline, Vertical Timeline.
3. Any new subtopics added to the converted topic(s) will display in the selected layout format and growth direction.
A flowchart is a kind of map that describes a process or workflow. Like a map, the basic building-blocks of a flowchart are topics, but flowchart topics reflect the visual conventions common to this type of diagram.

**Read Hint**

See Create a new flowchart and Work with flowcharts for more about adding, moving, and modifying topics in flowcharts.

The capsule-shaped terminal designates the Start and End of the process flow. All MindManager flowcharts start with a terminal.
An arrow starting from one topic and ending (at the arrowhead) at another indicates a shift in time or control passing from the first topic to the second.

The process topic—a rectangle—represents an action that needs to be performed for the process to move to the next step. Other than the initial Start topic and the Decision topic, all added topics are in this shape, but can be changed.

Diamond-shaped, decision topics indicate a place where a decision is required. The decision topic generally has two arrows leading to the two paths: "Yes" and "No."

The predefined process, a rectangle with two vertical borders, references a multi-step process that may be detailed in a separate flowchart.

A parallelogram topic represents data input or output.
<table>
<thead>
<tr>
<th>The hexagonal preparation topic indicates preparatory steps needed prior to a process.</th>
<th>The database cylinder shows the role of a database in the process.</th>

The hexagonal preparation topic indicates preparatory steps needed prior to a process.

The database cylinder shows the role of a database in the process.

The document topic references a document that is part of the process.

Circular connectors indicate places where multiple actions converge. While there may be multiple arrows going into the connector, only one arrow comes out and leads to the next step in the process flow.
Create a new flowchart

A flowchart is a diagram that represents, step by step, a process or workflow. This creates a visual model that makes it easier to get an overview of a project, process or system—and to identify problems, bottlenecks, or flaws. Flowcharts employ standardized visual shapes to convey different elements in the workflow, such as processes, decisions, documentation, and data input/output.

You can either create an empty flowchart using a template or use an existing flowchart as the basis for a new diagram.

Create a new flowchart from a template

You can create a new flowchart using one of the templates available in the New Map dialog.

1. Do one of the following:

   - On the Quick Access Toolbar, click the New arrow, and then click From Template.
   - Or, Click the File tab, and then click New.

   The set of built-in map templates is displayed.

2. Double-click the desired flowchart template.

   A new flowchart opens with a floating topic framed in green called "Start."

<table>
<thead>
<tr>
<th>READ NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>All flowchart topics display with quick add tabs, even if you have chosen to hide the Quick Add tabs in Options.</td>
</tr>
</tbody>
</table>

What do you want to do?

- Create a new flowchart from the template
- Create a new flowchart from an existing flowchart
- Enter topic text
- Understanding flowcharts versus maps

See also:

- Flowchart Topics
- Work with flowchart topics
- Create a map
Create a new flowchart from an existing flowchart

To add to or modify an existing flowchart without changing the original, use the Save As command in the File tab or the Quick Access Toolbar to save the flowchart under a new name.

**READ NOTE**
You cannot save a flowchart as an OPML file, an HTML file, or a PowerPoint file.

---

Enter topic text

When you create a topic, a placeholder topic appears, and is automatically selected.

- Type the text for the new topic and press ENTER.
- To create a line break within the topic text hold SHIFT and press ENTER.
- These additions▼ to your Central Topic can help set the theme for your map. You can add an image to set the tone for the flowchart.

You can also display the revision number and modification date using the Show / Hide command. You can reset the revision number on the Map Properties - Statistics tab.

Understanding flowcharts versus maps

When you create or open a flowchart, some features become available that are not present when you create or open map (and a few features become disabled).

Flowchart-specific features include:

- alternate commands in the Add Topics group of the Home and Insert tabs

![Flowchart Features](image)

- insert new a flowchart topic shape to the right (the default), left, above, or below the selected topic
- insert a decision tree with multiple options to the right (the default), left, above, or below the selected topic
- drag and drop topics anywhere on the canvas
- easily connect topics and label the relationship arrows
READ HINT
To make it easier to distinguish between them, map topics are framed in blue, flowchart topics in green. You can also combine flowchart and map topics in your flowchart, and modify the layout of both types of topics within the flowchart independently.

READ NOTE
If you add a flowchart topic to a regular topic within a flowchart or a regular map, the newly-added topic becomes a regular topic, framed in blue.

Disabled features include:
- Collapse and Expand map
- Show Branch Alone
- Presentation and Slides
- Balance Topics
- the Line style command
- Sort

READ NOTE
Some task info features will not be available in flowcharts.
### Work with flowchart topics

A flowchart consists of several different **types of topics**, including decisions to describe the components of a process. The capsule-shaped "Start" topic appears on a new flowchart automatically. You can then add new topics using the **Fly Out Shape Picker**, the **Quick Add tabs**, the **menu commands**, or **keystrokes**. You can even add topics and relationships "free-form," by double clicking the background to create the topics, then dragging and dropping the relationship lines between topics.

**Read Hint**

Flowchart topics are framed in green; regular map topics are framed in blue.

A feature that is unique to the flowchart is **Add Decision**. This inserts a diamond shape decision topic with rectangles above and below, linked by relationship lines labeled "Yes" and "No." Using the decision topic allows you to create forking paths in the process flow, then follow those paths to determine potential outcomes.

**Read Hint**

You can edit the text in the "Yes" and "No" box to reflect other types of forks, such as "True" or "False."

You also have the option to add a simplified version of the **Decision** topic (**Add Decision Only**) with only the diamond.

### What do you want to do?

- Add topics using the Fly Out Shape Picker
- Add topics using Quick Add tabs
- Add topics using menu commands
- Add topics and relationships "free-form"
- Add topics using keystrokes
- Move flowchart topics
- Insert relationships
- Delete or remove topics
- Flowchart layouts and themes

**See also:**

- Flowchart topics
- Create a new flowchart
- Create a map
- Format topics and objects
- Relationships
- Swim lanes
Add topics using the Fly Out Shape Picker

Once you have created a new flowchart, it’s easy to start building it using the Fly Out Shape Picker. In any other type of map, you can add a topic by clicking an existing topic’s Quick Add tab. With flowchart topics, when you hover over a topic’s Quick Add tab, a different tool pops up: the Fly Out Shape Picker.

The picker is a contextual menu in the shape of a hollow wheel with eight quadrants. It helps you choose the exact type of topic to add to your map.

1. Move your cursor to the shape you want to add. The quadrant turns grey, and a tooltip with the name of the selected shape displays.
2. Click the desired shape, then click where you’d like to insert the new topic in your map.
3. Once you’ve added the new topic to your map, you can adjust its position and edit its relationship to the parent topic.
   - Move the topic to another location by dragging it on the map.
   - Add a label to the relationship between the two topics by clicking that relationship, clicking Label, and typing a name for your label in the empty blue box.

READ NOTE
The Fly Out Shape Picker closes without adding a new shape when you move your mouse away from the wheel-shaped contextual menu.
You can choose to not display the Fly Out Shape Picker wheel when you hover a flowchart topic’s quick add tabs by clicking the File tab, clicking Options, clicking Edit, and then enabling the Hide Shape Wheel on selection frame for flowchart layouts check box.

Add topics using Quick Add tabs

While the Fly Out Shape Picker will always pop up when you hover over a flowchart topic Quick Add tab, you can still bypass this tool and click a tab to add topics to your map. This way, you will control every step of dragging and dropping the topics into place.

READ NOTE
If you are zoomed out to 50% or less, the Quick Add tabs may not be displayed.
Click the Start topic, which will display the green topic frame and the Quick Add tabs marked with a “+” symbol. Now click one of the Quick Add tabs.
The topic becomes surrounded by an orange square, and the relationship line is displayed.
Move the mouse to where you want to add the next topic—anywhere on the map surface.

Here ...

... or even here.

At the selected location, click the mouse. A new topic is added.

Need to move it?
Just drag and drop to the new location.
Add topics using menu commands

When you create a flowchart, some options on the Home or Insert tab (Add Topics group) change to reflect the unique features available with this type of map.

To add topics using the menu: in the Home or Insert tab, Add Topics group, do one of the following:

- Click **New Topic** to add a topic after the selected topic.
- Click the **New Topic** arrow and select one of the three alternate directions: Left, Above, or Below; or choose Insert Topic(s) Between to add an interstitial topic between every two contiguous selected topics.
- Click **New Decision** to add a decision diamond with “Yes” and “No” decision topics above and below the diamond.
- Click the **New Decision** arrow and select one of the three alternate directions: Left, Above, or Below; or choose Add Decision Only to add a decision diamond topic without the “Yes” and “No” decision topics.

Add topics and relationships “free-form”

You can also place topics the map and then create relationships as needed:

1. Add a topic by double clicking anywhere on the map. Then, add a second one.
2. Click on of the topic’s Quick Add tabs. The topic becomes surrounded by an orange square, and the relationship line is displayed.
3. Move the mouse to the frame of the second topic until it also is surrounded by an orange square, and click.
4. The relationship line connects to the second topic with the label field displayed.

   (If you don’t see the orange square on the second topic, clicking will not connect the two topics. Instead, it will create a third, new topic connected to the first one.)
Add topics using keystrokes

<table>
<thead>
<tr>
<th>To add:</th>
<th>Keystroke</th>
<th>Mouse</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topic</td>
<td>Select a topic and press ENTER</td>
<td></td>
</tr>
<tr>
<td>Topic before (above) a topic</td>
<td>Select a topic and press SHIFT+ENTER</td>
<td></td>
</tr>
<tr>
<td>Decision topic</td>
<td>Select a topic and press INSERT or CTRL+ENTER</td>
<td></td>
</tr>
<tr>
<td>Callout topic</td>
<td>Select a topic and press CTRL+SHIFT+ENTER</td>
<td></td>
</tr>
</tbody>
</table>
| Floating topic   | Click the map background and type the topic text at the cue arrow.  
                      | Or                                           | Double-click the map background and type directly into the floating topic. |

You can set options to enable these features.

Edit and format flowchart topics

Just as you can edit topics on maps, you can edit flowchart topics to replace or modify the text or resize the topic to control how the text wraps. You can also modify and format relationship lines between topics, including adding text labels.

Move or copy flowchart topics

Drag and drop flowchart topics to a new location, "free-form" restructuring your map.

- Select the topic(s) and drag them to a new position on the map. A visual cue appears showing where the topic(s) will be added.
- To copy, press CTRL as you drag and drop.
Callouts remain attached to their parent when they are moved. Use **Cut** and **Paste** to move a callout to a different parent.

While you move topics around, you may want to keep some of your map's topics static. From the topic's contextual formatting menu, click the Options icon and select **Pin Topic**. You can apply this option all at once to a selection topics.

**READ NOTE**

If you want objects to snap to a grid during drag and drop, enable the **Snap to grid** option.

You can use drag and drop to move and copy topics between maps that you are viewing simultaneously.

By default, topics automatically reposition when other topics are moved in their location. A topic moved onto the location of a pinned topic will overlap that topic.

**Insert relationships**

You can insert a relationship between floating topics:

1. Select your topics in the order you want them related to one another and do one of the following:

   - Right-click your selection and, in the contextual menu, select **Insert Relationship**.
   - On the **Home** or **Insert** tab, in the **Objects** group, click the **Relationship** button.

**READ HINTS**

You can also add a relationship by dragging one topic over another, releasing the mouse button when the menu button ☐ appears, and choosing **Insert Relationship**.

Learn more about relationships and the many ways to format relationships in their relative topics.

**Link to a flowchart topic by dragging**

1. Drag the topic that you want to link to over the topic where you want to insert the link.
2. When the menu button ☐ appears, release the mouse button, and choose **Insert Link**.
   
   To insert links between the two topics, choose **Reciprocal Link**.
Add the content of a flowchart topic as a note

1. Drag the topic containing the text that you want to add as a note over the topic to which you're adding the note.
2. When the menu button appears, release the mouse button, and choose Drop as Notes

Delete or remove topics

You can delete a topic (including its callouts).

Read Hint

If you only wish to suppress the display of certain map elements or topics you can use the Show / Hide command and the Filter commands to hide them without removing them from the map.

1. Select the topic(s) and do one of the following:
   - Press DELETE. The topic(s) (including icons, images and shapes), attached subtopics and callouts will be deleted.
   - Or On the Home tab, click the Delete button, and then select Topic.

Flowchart themes

MindManager provides a number of flowchart themes, including swim lanes, or you can create and save your own custom themes.

Flowchart layout and themes

You can use map layout features to adjust the arrangement of flowchart topics. Additionally, you can use the Layout pull-down menu on the Format tab to convert any flowchart topic into a regular topic with the selected layout, effectively combining flowchart and map layouts in one visual display.

1. Select the topic(s).
2. Click the Layout pull-down arrow, and select a layout from the list: M Radial Map, Right Map, Tree, Split Tree, Org Chart, Up Org Chart, Split Org Chart, Timeline, Vertical Timeline.
3. The frame around the topic(s) will change from green to blue. Any new subtopics added to the converted topic(s) will display in the selected layout format and growth direction.

Flowchart themes

MindManager provides a number of flowchart themes, including swim lanes, or you can create and save your own custom themes.
Work with Maps

Use Expanded File Management

What Is Expanded File Management?

MindManager users like to share the ideas they develop or projects they shape in their maps, and when they work in a team, they want to invite their colleagues to enrich their documents in a collaborative manner.

See also:
- Add a cloud storage service
- Add a SharePoint Site

Your favorite sharing services

With Expanded File Management, MindManager offers an easier way to access files whether they are stored locally, or externally in services like SharePoint, Box, Dropbox, Google Drive and OneDrive. Users can easily add external storage solutions directly from MindManager's Backstage File menu, and access their remotely-stored files like they would their local files. Built to support third-party online services, this feature will add more of your favorite online storage solutions with future releases.

Invite colleagues to contribute

MindManager's Expanded File Management is also designed to help you collaborate on documents thanks to a "check out/check in" system. When you need to work on a document, check it out to lock the file, thereby preventing colleagues with access from editing the file while you are making revisions. Once you've completed your changes, you then unlock the document so others can add their input.

Add a cloud storage service

You can add SharePoint sites and third-party accounts, including Box, Dropbox, Google Drive and OneDrive, directly from the Backstage File menu, in the Open pane. When working with a cloud storage service or SharePoint site connected to MindManager, you can only open and edit MindManager files.

See also:
- What is Expanded File Management?
- Add a cloud storage service
- Add a SharePoint site
Connect to a cloud storage service

To connect to a third-party account:
MindManager’s Extended File Management feature supports third-party services, such as Box, Dropbox, Google Drive, and OneDrive. To add a third-party service account to your MindManager configuration, you can either enter credentials of an account you already own or create a brand new account directly from the File > Open pane.

1. From the Open pane of the File menu, click Add Place.

   READ HINT

   If there are other services already registered with MindManager, the Add Place command will be listed below those services.

2. In the Add Place dialog, next to the third-party service that you want to add, click Add.

3. Then, either sign in with your existing credentials or sign up for a new account.
   Follow the instructions, and MindManager will connect you to a third-party service account, which is where you will store and share your files.

Share a map via a connected service

To share via a third-party account:
Files shared via third-party accounts are managed in accordance with the sharing principles of the service. MindManager links directly to the third-party service from the Share pane of the Backstage File menu:

1. Open the map you want to share.  READ HINT

   Maps you share via a third-party service do not need to be stored in any particular location. To be shared by that service, they are first saved in that location.

2. Click the File tab, then click Share to display the Share pane.

3. Select the service you want to use to share your map. The Save to... dialog opens with the name of your file automatically filled in the File name box.

4. Click the Manage Share Permissions link. A browser window opens to the page where you can edit your share permissions.

   READ HINTS
You can insert a link in a topic to a file stored on a cloud storage service. For more information see, Link to a file on a cloud storage service.

If you haven't logged in to your storage service beforehand, you will be asked for your credentials to access the page where you can manage your share permissions.

Collaborate with a connected service

When you open a shared file that is stored on an online storage service, you will see an overlay in the upper right corner informing you of its status and allowing you to lock or unlock your document for editing.

There are three different statuses:

- **Editing - Locked by me**: You have opened the shared document and only you can edit it at this time.
- **Read Only - Locked by ____**: A colleague has opened the shared document and only he or she can edit it at this time.
- **Read Only - Unlocked (Click to Lock/Edit)**: The document has been unlocked or closed by your colleague. You can lock it to start editing it. Click the down arrow and select Lock from the Lock/Unlock drop-down menu.

View Recent Files from all locations

In the File tab, the Open pane offers a view of the recently-opened files from all locations, marked with the icon of the respective service where they are stored. This way, users have a single place to view and pin the most current and important documents they're working on.

In addition to the files you have saved there, you can open files stored by other applications or users from within MindManager when you are logged into your cloud storage account.
Add a SharePoint site

If you’re using SharePoint sites within your organization, you can add a site from the Backstage File menu, in the Open pane. Once your site has been added, you can navigate to and open SharePoint files from within MindManager.

To add a SharePoint site:

1. From the Backstage File menu, select Open and click Add Place: the Add Place dialog opens with a selection of services
2. Click the Add button next to SharePoint; the Add SharePoint Document Library dialog opens.
3. Enter your SharePoint site address in the empty box and click Next: SharePoint will display a prompt for you to enter your User name and Password for this site.
4. Click OK to connect to your SharePoint site.

To remove a SharePoint site:

1. Go to the Add Place dialog, repeating the first two steps detailed above; opposite the SharePoint icon and label, the Add button is now marked Remove.
2. Click the Remove button to disconnect from the SharePoint site.

When viewing a map, users can also quickly check in and check out SharePoint files.
View and Navigate Maps

MindManager offers several views for working with your map.

<table>
<thead>

| **Linked Maps view**                   |                          |
| The **Linked Maps view** is used to    |                          |
| view maps that are linked together     |                          |
| by links. It displays preview images   |                          |
| of the current map and all the        |                          |
| maps that it links to. (Other linked   |                          |
| documents are displayed as placeholders). You can choose to display only the first level maps - those directly linked to this map - or maps at the second, third, or all levels. In this view you can issue commands on all of the maps or on only a selected subset. |

| **Gantt Pro (Enterprise) or Gantt Chart (Professional)** |                          |
| The **Gantt Pro** or **Gantt Chart** deliver smart controls for managing tasks and resources. It makes it easy to stay on top of resource allocation and the progress of critical-path tasks. |                          |

| **Slides view**                           |                          |
| In **Slides view** you can create a set |                          |
| of slides that display different parts  |                          |
| of the map, to help focus attention     |                          |
| for printing or presentation. You can   |                          |
| start a full-screen slide show from this |                          |
| view.                                  |                          |

| **Schedule View**                        |                          |
| **Schedule view** lets you view your     |                          |
| map by task times.                       |                          |

| **Icon View**                            |                          |
| **Icon view** lets you quickly assign    |                          |
| priorities to topics and tasks in your   |                          |
| diagrams.                               |                          |

| **Tag view**                             |                          |
| Tag view lets you quickly visualize the  |                          |
| status, progress, and issues of elements |                          |
| within a project or workflow.            |                          |
**Outline view**

The **Outline view** allows you to display and edit maps using a familiar visual form: topics are listed linearly from top to bottom. This view can be a helpful reference if you are just beginning to use MindManager.

If you plan to use an outline export format, (like Word) the outline view can be used to preview the map in a linear arrangement so you can make any necessary adjustments before the export. You may also print the map outline directly from this view.

This view is more limited than Map view: It excludes certain map components (floating topics, relationships, images and boundaries).

---

**Analysis View**

**Analysis views** let you make better decisions by helping you to prioritize and categorize your mapped topics. In this view you can drag and drop the topics you want to evaluate into an analytic chart and position them to reflect their relative qualities. Once the topics are positioned on the chart, you can automatically assign markers to the associated map topics based on their chart locations.

You can create multiple Analysis Views from a single map, and any map topic can appear in multiple views. These views are saved with the map, and they can be modified at any time.

---

**Walk Through view**

**Walk Through view** allows you to display a map for presentation so you can navigate through the map with a minimum of distraction. It switches to a full screen view for maximum map space, hides all menus and toolbars and provides shortcuts and options to make navigation smooth.

You can view multiple maps in MindManager and switch between them using their tabs. You can tile maps in the main window to see two or more maps at the same time.

---

**Switch between views**

Use the commands on the **View** tab, in the **Document Views** group.

[Read Hint]

You can also switch between Map view, Outline view, Schedule view, Icon view and Tag view using the buttons on the **Status Bar** at the bottom of the application window.

**View multiple maps at the same time**

Sometimes you want to view multiple maps side-by-side, or across multiple display screens. You can do this by detaching the map’s workbook tab and relocating it.

To display two or more maps simultaneously:

1. Click the workbook tab for an open map.
2. Drag and drop the tab to the desired location or screen.
The map is displayed in the new location. Use the mouse to navigate between multiple maps; ribbon commands, task panes, and footer buttons will apply to the selected map.

To cancel multiple map display:
1. Click the workbook tab for the “torn off” map.
2. Drag the tab back to the MindManager canvas. When the map background is highlighted, drop the map on it.

The map is displayed in the original location below the ribbon

**Navigate between maps**

The easiest way to navigate between open maps is to use the workbook tabs at the top or bottom of the map window. These are enabled using the MindManager View options, and you can choose to display either the Central Topic text or the map filename on the tab. Workbook tabs can be positioned at the top or bottom of the map window.

- **Read Hints**
  
  Click and drag workbook tabs to reorder them.

To control their position, right-click a tab, and set the Workbook Tabs Placement.

- Right-click a tab to Save, Print or Close the map, reveal all map elements that were hidden using the Filter command, or change the map Properties.

**Switch to a different map**

- Click its workbook tab.
- On the View tab, in the Window pull down, under Switch, click the name of the map name you want to switch to.

  - Press CTRL+F6 or CTRL+TAB to view the next map
  - Press CTRL+SHIFT+F6 or CTRL+SHIFT+TAB to view the previous map.

- **Read Hint**

When you switch to a different map, it will be displayed in the view (Map view, Linked Maps view, or Outline view) last used for it.

**View maps in cascading or tiled windows**

- **Read Note**

You cannot view maps in cascading or tiled windows when using workbook tabs. You can turn off workbook tabs in the view options dialog.
By default, maps are displayed one at a time in either Map view or Outline view with workbook tabs across the top or bottom of the window.

1. Do **one** of the following:
   - Right-click a map's workbook tab, and then click **Arrange**.
   - On the **View** tab, in the **Window** pull down, click **Arrange**.

2. **Optional** in the list of open maps, select any maps you want to close and click **Close Window**.
3. Select the maps you want to arrange. Maps you do not select will be minimized.
4. Click the arrangement you prefer (tiled or cascading).

![Read Hint]

To arrange maps manually click the map window’s Restore Down button (at the upper-right of the map window) and drag to size and place the window for each map.

**See the location of a map**

If you have a map open in the map window you can view its location on your system or in Mindjet Files.

1. Right-click on the map's document tab at the bottom of the window.
2. Click **Show in Explorer** or **Show in Mindjet Files**.
Use Map view

MindManager starts in Map view. This is the best view for creating and editing your maps and for getting the big picture of what the map covers. This view displays all the components of your map including floating topics, relationships, images and boundaries. You will probably do most of your work in this view.

For smaller maps, navigation is straightforward using the mouse. For large maps you may find it helpful to collapse and expand topics to make it easier to move around the map.

You can also use keyboard shortcuts to navigate through maps and adjust the view.

Switch to Map view

To switch to Map view from another view click Map in the View tab Document Views group, or click Map view in the Status Bar.
Navigate in Map view

You can also navigate through maps efficiently using the keyboard:

<table>
<thead>
<tr>
<th>Keystroke</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrow keys</td>
<td>Select the topic above or below or to the left or right of the current topic.</td>
</tr>
<tr>
<td></td>
<td>(For left and right arrows, the selection begins at the top main topic after you pass through the central topic to the other side of the map.)</td>
</tr>
<tr>
<td>TAB, SHIFT+TAB</td>
<td>Move to the next or previous topic, callout or subtopic. Use this method to visit each topic on the map in order. Floating topics and callouts attached to relationship lines are skipped.</td>
</tr>
<tr>
<td>BACKSPACE, SHIFT+BACKSPACE</td>
<td>Move back or forward through the history of topics you have selected.</td>
</tr>
</tbody>
</table>

For more information see [Keyboard shortcuts](#).

Orient a map

There are several ways to orient the map in Map view.

Pan and zoom

To move the map use the scroll bars along the map sides and bottom, or click on the map background or on the central topic and drag it.

Set the zoom factor for the map

Do one of the following:

- On the **Status Bar** drag the Zoom Factor slider to the desired magnification level, or click **Fit Map** to fit the whole map into the window.

- On the **View** tab, in the **Zoom** pull down, click the **Zoom In / Zoom Out** buttons, or click **Fit Map**.

For wheel-mouse users hold the CTRL key and use the wheel to zoom in and out.

- Press CTRL+F5 to fit the whole map into the window.
- Press CTRL+0 (zero) for 100% zoom.
READ HINT
If you are working on a large map, try using the Mini View window.

**Center an object or the entire map**

Press ALT+ F3.

**READ HINT**
Use the Focus on Topic command to center and expand the current topic while collapsing all other topics.

**Center the map and collapse all topics to one level**

Do one of the following:

- On the Status Bar, click the Expand arrow, and then click Collapse Map.
- On the View tab, in the Detail group, click Collapse Map.

**Use the Mini View**

Use the Mini View window to navigate quickly through large maps.

**Display the Mini View window**

- On the View tab, in the Zoom group, click Mini View.

When you first open the Mini View window, you'll see a small simplified version of your map with a boundary line enclosing the active viewing area. You can move this window to keep it out of the way as you work on the map.

**Use the Mini View window**

- Use the controls to collapse or expand the window.
- Click and drag the view area rectangle to another portion of the map.

**Focus on a topic**

The Focus on Topic command is especially useful for presenting larger maps in meetings, to enable the viewer to see the topic's details without being distracted by the rest of the map. It shows the selected topic expanded to an optimum level, its sibling topics (collapsed), main topics (collapsed) and the central topic.

1. Select the topic.
2. Do one of the following:
On the **Status Bar**, click the **Expand** arrow , and then click **Focus on Topic**.

Or

On the **View** tab, in the **Detail** group, click **Focus on Topic**.

Or

Press **F3**.

If you want to expand the topic completely, press ALT+SHIFT+. (period).

The **Show Branch Alone** command (available in both Map view and Outline view) shows only the selected topic and its descendants.

---

**Show or hide map elements**

It is not necessary to delete map elements that you do not want shown on your map. Instead, you can use the **Show/Hide** command to hide elements or topics in Map view. This can be convenient when you add information that is for your own reference and you want to print or distribute the map or use it in a presentation.

Note that **Walk Through view** has its own Show/Hide command.

**Show or hide a particular class of map elements**

1. On the **View** tab, in the **Detail** group, click **Show/Hide**.
2. Click the elements you want to show or hide.

The filter indicator at lower-left shows when some map elements are hidden.

To see the default set of map elements again, do one of the following:

- Right-click the indicator and then click **Reset Show/Hide to Default**.
- On the **View** tab, in the **Detail** group, click **Show/Hide**, and then click **Reset to Default**.
This command applies to the entire map.

Use the Filter commands to show or hide selected groups of topics or objects, or to show or hide topics based on their task info or other properties.

Split the map view

You can split the map view either horizontally or vertically so you can see different sections of the map at the same time.

When the map view is split, the two panes can be viewed independently. This means in each pane you can select different objects, use a different zoom factor or level of detail, and even use different filters, or different views. The two views are kept in sync: Any changes you make to the map are immediately reflected in the other pane.

This is especially convenient when working with large maps. For example, you can display the entire map in one window to get an overview, and work on it, zoomed in, in the other window.

Do one of the following:

On the View tab, in the Window drop down, click Split, and then click Horizontal or Vertical. Or Right-click the map's workbook tab and under Split Window, click Horizontal or Vertical.

You can drag the splitter bar between the windows to change their size.

Remove the split:

- On the View tab, in the Window pull down, under Split Window, and click Remove Split.
- Right-click the map's workbook tab and click Remove Split.
Use Linked Maps view

What do you want to do?

See maps in Linked Maps view

Use Linked Maps commands

Troubleshoot Linked Maps

The Linked Maps view is used to view maps that are linked together by links. Linked Maps can be created by two methods:

- By adding links to link existing maps together
- By exporting topics from a map to a new map using the Send To command

This view displays preview images of the current map and all the maps that it links to. You can choose to display only the first level maps - those directly linked to this map - or maps at the second, third, or all levels. The map's "level" in relation to the parent is displayed as a small number in the lower-right of the map thumbnail.

**MINDJET ONLINE FEATURES**

Linked Maps view does not support links to maps stored online in Mindjet Files.

See maps in Linked Maps view

- On the View tab, in the Document Views group, click Linked Maps.

A new workbook tab will appear, with the parent map name prefixed by "M:." For example, a workbook tab labeled M:My Map is created when the map My Map is displayed in Linked Maps view along with its linked maps.

In this view you can issue commands on all of the maps or on only a selected subset. Note that these maps are shown as previews: only the first map is opened unless you subsequently open the others.

**Linked Maps view commands**

Once you have selected one or more maps in the Linked Maps view you can use the Linked Maps commands to execute perform the actions listed below. Many of these are also available when you right-click on a map preview.
## Work with Maps

<table>
<thead>
<tr>
<th>Group</th>
<th>Command</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Map</td>
<td>Open Map</td>
<td>Opens the selected map in the normal Map view so you can view and edit it.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Double-click on the preview image to open the map.</td>
</tr>
<tr>
<td></td>
<td>Close Map</td>
<td>Closes the map but does not remove its preview from the Linked Maps view. If you made changes to the map, use the Refresh command (below) to see a current preview.</td>
</tr>
<tr>
<td>Linked Maps</td>
<td>Send as Email</td>
<td>Zips the selected maps and attaches them to an email using the <strong>Send to wizard</strong>.</td>
</tr>
<tr>
<td></td>
<td>Pack and Go</td>
<td>Uses the Pack and Go wizard to archive maps in a .zip file.</td>
</tr>
<tr>
<td></td>
<td>Quick Print</td>
<td>Prints the selected maps immediately.</td>
</tr>
<tr>
<td></td>
<td>Search</td>
<td>Opens the <strong>Search Files</strong> task pane so you can search the selected maps for a specific word or phrase.</td>
</tr>
<tr>
<td>Edit</td>
<td>Rename</td>
<td>Renames the selected map. If other maps link to this map, you will have to repair their links.</td>
</tr>
<tr>
<td></td>
<td>Select All</td>
<td>Select or deselect all maps in the view.</td>
</tr>
<tr>
<td></td>
<td>Deselect All</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Refresh</td>
<td>Refreshes the thumbnail previews for linked maps. If these maps have been opened, modified and then saved, you must refresh the previews to see the changes.</td>
</tr>
<tr>
<td></td>
<td>Map Levels</td>
<td>Displays maps linked directly to the parent map (first level), or includes second, third, or all levels of maps. The map's &quot;level&quot; in relation to the parent is displayed as a small number in the lower-right of the map thumbnail image.</td>
</tr>
<tr>
<td></td>
<td>Thumbnails</td>
<td>Use large thumbnails if you only have a few maps.</td>
</tr>
<tr>
<td>Assign</td>
<td>Markers, Map themes</td>
<td>Lets you assign a <strong>Theme</strong> or a <strong>Marker List</strong> to selected maps</td>
</tr>
</tbody>
</table>
Combines all the displayed maps into one "super" map that you can save with a new name. This map is static - it does not contain any links to the maps that were combined to create it. If the individual maps change after combining them, you will not see the changes reflected in the combined map.

**Encrypt maps**

You can Encrypt multiple maps with passwords from the Linked Maps View.

1. Select the map(s)
2. Click the **File** tab, click **Info**, and then click **Encrypt Document**.

The maps will be protected with the passwords you enter. If you want to view previews of the password-protected maps in Linked Maps view you'll need to open them first.

**Linked Maps troubleshooting**

**Broken Links**

If you delete or rename a map that is the target of a link, the link will be broken.

The Linked Maps View **Rename** command helps you avoid broken links: it allows you to rename the selected map and automatically updates all links in the maps that link to it, so no links are broken. (You can also right-click a map and choose **Rename**.)

When you open a map with broken links in Linked Maps View the map preview displays a broken link message. To repair the link, click on the thumbnail and either remove the link (also removes the map from the view) or update the map path to link to the correct file again.

Click **Refresh** to see an updated view of all the maps (for example, if you edit one of the maps in Map View).

**Missing Preview Image**

If you see a message that there is no preview image for the map, that means the map Properties Save preview image setting was disabled when the map was saved. You can remedy this by opening the map, enabling this setting, and re-saving the map.

**Map is Password Protected**

If you see an indicator that tells you a map is password protected instead of the map preview, you can double-click on the indicator and open the map (you must provide the password), then return to Linked Maps View.
# Work with Maps

**Gantt Pro**

Gantt Pro *(Enterprise)* or Gantt Chart *(Professional)* delivers smart controls for managing tasks and resources. It launches in a standalone window, ideal for users working with dual monitors. Gantt Pro and Gantt Chart make it easy to stay on top of resource allocation and the progress of critical-path tasks.

Enterprise users have access to Gantt Pro, which includes features for modifying task scheduling to achieve the earliest end date, exporting reports, and visualizing resources based on their allocation.

<table>
<thead>
<tr>
<th>What do you want to do?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Launch Gantt Pro</td>
</tr>
<tr>
<td>Modify tasks</td>
</tr>
<tr>
<td>Manage resources</td>
</tr>
<tr>
<td>Set task dependencies</td>
</tr>
<tr>
<td>Modify task scheduling</td>
</tr>
<tr>
<td>Insert a task</td>
</tr>
<tr>
<td>Insert sub-tasks and sibling, predecessor or successor tasks</td>
</tr>
<tr>
<td>Remove task information</td>
</tr>
<tr>
<td>Manage slack time</td>
</tr>
<tr>
<td>Change project dates</td>
</tr>
<tr>
<td>Export Gantt charts</td>
</tr>
<tr>
<td>Customize Gantt Pro</td>
</tr>
<tr>
<td>Navigate a Gantt chart</td>
</tr>
<tr>
<td>Change the Gantt Pro view</td>
</tr>
</tbody>
</table>

## Launch Gantt Pro or Gantt Chart

- On the **View** tab, in the **Documents Views** group, do **one** of the following:
  - *(Enterprise)* Click the **Show Gantt Pro**.
  - *(Professional)* Click the **Show Gantt Chart**.

Gantt Pro opens in its own window. To return to the map, click **Back to Map**.

## Modify tasks

1. In Gantt Pro or Gantt Chart view, right-click a task, and choose **Edit Task**.
2. In the dialog, click the **Task** tab.
3. Do **any** of the following:
   - Set the task’s progress by choosing a percentage from the **Progress** drop-down.
   - Set the start date by choosing a date in the **Start date** drop-down.
   - Set the due date by choosing a date in the **Due date** drop-down.
   - Set the task duration by choosing a time increment and number in the **Duration** area.
- Set the task as a milestone by clicking the **Milestone** box. A milestone is a status that does not have any duration or any work associated with it. They can have dependencies, but no resources.

**Read Note**

Gantt Pro and Gantt Chart also display information about a task's costs and effort. For information about setting task costs, see **Define Task Cost**. For more information about specifying task effort, **Define Task Info**.

### Manage resources

1. In Gantt Pro or Gantt Chart view, right-click a task, and choose **Edit Task**.
2. In the Gantt Pro dialog, click the **Resources** tab.
3. Do **any** of the following:
   - Add a resource by typing the resource name in the bottom drop-down, and clicking **Add**.
   - Remove the resource by clicking the **X** button next to the resource.
   - Specify the percentage of the resource's time you expect the resource to spend working on the task over the course of the full task duration by choosing a percentage from the **Load %** drop-down.

**Read Note**

To see a list of resources and how they are allocated, click **Resource Chart**.

You will only see the **Resource Chart** button if you are using MindManager Enterprise.

### Set task dependencies

1. In Gantt Pro or Gantt Chart view, right-click a task, and choose **Edit Task**.
2. In the Gantt Pro dialog, click the **Dependencies** tab.
3. Do **any** of the following:
   - Set predecessor or successor tasks by choosing tasks from the drop-down and choosing an option from the **Dependency Type** drop-down.

   - **Finish-to-Start**: Task 2 Start date cannot be earlier than Task 1 Due date
   - **Start-to-Finish**: Task 2 Due date cannot be earlier than Task 1 Start date
   - **Start-to-Start**: Task 2 Start date cannot be earlier than Task 1 Start date
   - **Finish-to-Finish**: Task 2 Due date cannot be earlier than Task 1 Due date

   - Add another predecessor or successor task by choosing a task, and clicking **Add**.
Modify task scheduling to achieve the earliest end date

- In Gantt Pro, click **Solve**.

**READ NOTE**
You will only see the **Solve** button if you are using MindManager Enterprise.

Insert a task

1. In Gantt Pro or Gantt Chart view, right-click a task, and choose **Edit Task**.
2. Right-click, and choose **Insert Task**

Insert sub-tasks and sibling, predecessor or successor tasks

1. In Gantt Pro or Gantt Chart view, right-click a task, and choose **Edit Task**.
2. Right-click, click **Insert**, and choose any of the following:
   - Sub-task
   - Sibling Task
   - Predecessor Task
   - Successor Task

Remove task information

1. In Gantt Pro or Gantt Chart view, select a task.
2. Right-click, and choose **Remove**.

Manage slack time

In Gantt Pro or Gantt Chart view, click a task, click **Remove Slack**, and then do one of the following:

- Click **From selected and dependent tasks** to remove slack time only from the selected task.
- Click **From all tasks** to remove slack from all tasks in the map.

Change project dates

In Gantt Pro or Gantt Chart view, click **Move Project**, and then do one of the following:

- Click **Change start date**, choose a new date from the drop-down in the Project Start Date dialog, and click **OK**.
- Click **Change end date**, choose a new date from the drop-down in the Project End Date dialog, and click **OK**.

Export Gantt charts

*Export a Gantt chart as an image*
1. In Gantt Pro or Gantt Chart, click **Export**.
2. Click **Export images**, and click one of the following:
   - **Chart only** to export the chart.
   - **Grid and chart** to export both grid and chart.
3. Click one of the following:
   - **Copy to Clipboard** to paste the image in another document.
   - **Save as file** to save as a JPEG, GIF, PNG, TIFF, or BMP.

### Export a Gantt chart as a report

1. In Gantt Pro, click **Export**.
2. Click **Export reports**, and click one of the following:
   - **Project report**
   - **Summaries report**
   - **Milestones report**
   - **Tasks report**
   - **Grid report**
3. Click one of the following:
   - **Preview** to view the report in its own window.
   - **Copy to Clipboard** to paste the report in another document.
   - **Save as file** to save a report as a CSV file. You cannot save project reports as a CSV file.

⚠️ **READ NOTE**

You will only see the **Solve** button if you are using MindManager Enterprise.

### Customize Gantt Pro

1. In Gantt Pro or Gantt Chart, click **Options**.
2. Uncheck the **Use the default options for this map** box.
3. Do any of the following:
   - In the **Project Visualization** area, specify what to do with tasks that don’t have an owner, and whether to include regular relationships as start-to-finish dependencies.
   - In the **Charting** area, choose the level of granularity to determine how far you can zoom in.
   - In the **Columns to show in grids** area, specify what columns to display in the grid.
   - You can also set topic filtering, specify whether to show topic formatting, specify how text displays next to task bars, highlight tasks that could make the project late, specify how tooltips are displayed, and specify how the chart is sorted.

### Navigate a Gantt chart

In Gantt Pro or Gantt Chart, click **Go to**, and choose one of the following:
- Click **Today** to go today's date.
• Click **Start of Project** to go to the first day of the project.
• Click **End of Project** to go to the last day of the project.

*Change the Gantt Pro view*

In Gantt Pro or Gantt Chart, do **one** of the following:

• Click **Zoom in**.
• Click **Zoom out**.
• Click **Zoom to fit** to have the chart span the width of the Gantt Pro window.
Use Analysis Views

Analysis Views can help you make better decisions by prioritizing and categorizing your mapped topics. This feature allows you to display topics of your choosing on a customizable 2x2 analytic chart, and position them to reflect their relative rankings using the chart's axes values as criteria. Markers are applied to the topics based on their chart positions.

Using this qualitative, visual method (as opposed to a method based solely on numerical data) allows you to evaluate information and ideas using criteria that are not easily quantified. Unlike standard “table generation” products, an Analysis View allows you to dynamically add, remove, and move topics on the chart to reflect your evaluation based on these criteria.

**Read Hint**

**Brainstorming,** and then creating an Analysis View as a group activity, provides visual feedback that encourages productive, focused discussion, thus allowing you to reach alignment within your team quickly and easily.

You can create multiple Analysis Views on a map, and these Views can use any map topics you choose. That is, a topic on the map may appear in one, several, or no Analysis Views. This offers you a variety of ways to evaluate distinct or overlapping sets of topics using different criteria. The Views you create are automatically saved with the map, and you can create a template from any view to use its settings again on another map. You can also copy any View as a graphic that you can paste into your map or another document to demonstrate your decision-making process.

What do you want to do?

- Create a new View
- Modify or remove an existing View
- Save and manage Analysis View templates
- Copy the Analysis View chart
This feature is disabled by default. To see these options click the File
tab, click Options, and then click Add-Ins.

Create a new View

When you create a new Analysis View, you select the topics to use in the View, configure the View’s parameters, and then position the topics in the View to reflect their rankings. Markers that indicate these rankings are automatically added to the topics in the View based on their positions. Once you are finished with your analysis, you can apply the markers shown in the View to the topics on your map.

Select topics to include in the View.

1. Select the topics you want to include on your map. See Select topics and objects for hints on how to select multiple topics.

   These can be from various locations on your map (they do not all need to be from a single branch) and can include floating topics and callouts. You can add or remove topics from the View later, so you are not "locked into" using only the topics that you add now.

2. On the Advanced tab, click the Analysis arrow, then click New.

3. When the Analysis Window appears, you’ll see a tab for the new View with the topics you selected in the Unsorted Topics list.

   If this map already has other Analysis Views defined, they will each display a tab in the Analysis Window.

Configure the view

In the Analysis Window, at the top of the tab for the new View, click Configure to set the View’s parameters:

View Name – Enter the name for the View. This will be displayed as the View’s title.

View Template – Select a template to use its pre-defined configuration settings. You can customize these at will for this View.

View Type – Determines how the axes are configured. 2-Axis and Segmented views allow either quadrant or subjective groupings defined by bands. (Bands divide the chart diagonally into 3 regions used for applying markers, in contrast to the quadrant view with 4 regions.)

Axis Labels or Quadrant Labels – Define the criteria you use for ranking your ideas, and the directions of arrows on 2-Axis Views.

Markers – Select the markers that will be applied to topics based on their positions in the View. You can choose from any of the markers that are in the current map’s marker list. If your View Type can use bands, you can choose Bands and select 3 markers (assigned from lower-left to upper-right), or select Quadrants and select 4 markers.
When you are satisfied with the View's configuration settings, click **Done**. You can modify these settings again at any time to fine-tune your View by clicking **Configure** again.

**Position topics in the View**

Once you have set the initial configuration options, you can move topics from the Unsorted Topics list into the View and then position them to reflect their ranking. You do not have to include all the Unsorted Topics in the View.

To move topics into or out of the View:

- Select one or more topics in the Unsorted Topics list, and then click **Move Topic into View**.
- Select a topic in the View, and then press Delete.

To rank topics:

- Drag the topics within the View to position them at locations that reflect their rankings based on the axis criteria. You'll see their markers change when you drag them to different regions in the View.

If you have configured your chart to use Bands to define regions for applying markers, you can adjust their position on the View to fine-tune the subjective grouping of your topics. As you adjust them, the topic markers will change to reflect this grouping.

To adjust Bands:

- In the Analysis Window, click **Adjust Marker Regions** below the Unsorted Topics list to begin the Adjust Bands mode. While in this mode you can drag the handles at the end of each band to adjust it. Click **Adjust Marker Regions** again to exit this mode.

  ! **READ NOTE**

  You cannot move topics within the View while you are in Adjust Bands mode.

**Apply the View markers to the map**

To apply the markers you see in the Analysis View to the topics on your map:

- Click **Apply Markers to Map** below the View.
- If you continue to adjust the topic positions in the View, or if you change the markers used by the View configuration, the markers on your map will be updated automatically.

**Modify or remove an existing View**

Once you have created an Analysis View, you can modify it by adding more topics to it from the map. You can open the View to further configure it by adding, editing, or removing topics directly in the Analysis Window, or by changing the configuration settings.

**Add more map topics to the View**

1. On your map, select the topics you want to add to the View.
2. On the ribbon’s **Advanced** tab, click the Analysis arrow, then click **Add** and select a view from the list of existing views.

The topics are added to the Unsorted Topics list for the View. You can add them to the View, position them, and then apply the markers from the View to the map topics.

**Open an existing Analysis View**

To open the View:
- On the ribbon’s **Advanced** tab, click the Analysis arrow, then click **View** and select the View in the list.

The View will open in the Analysis Window.

To switch to another View:
- In the Analysis Window, click a different View's tab at the top of the window.

**Add, edit, or remove topics used in the View**

To add a new topic to the list of unsorted topics:
- Click “+” then enter the new topic name. You can then add this topic to the View and position it. The new topic is also added to the map under a parent topic named after the View Name.

To edit a topic in the Unsorted Topics list or in the View:
- Double-click the topic, and edit its name. The topic will also be changed on your map.

To remove a topic from the View, move it back to the Unsorted Topics list:
- Select the topic in the View and press DELETE. This does not remove any markers that were already applied to the topic on the map.

To remove topics from the Unsorted Topics list:
- Select one or more topics in the Unsorted Topics list, and then click “-” or press DELETE to remove it from the list.

![READ HINT](image)

This only removes the topic from the current Analysis View: it does not remove it from other Analysis Views in this map or from the map itself. This does not remove any markers that were already applied to the topic on the map.

**Change the View Configuration**

You can change the configuration settings used by a view at any time.

1. In the Analysis Window, select the View, and click **Configure**.

2. You can select a different template, or modify the configuration settings manually. If you select a new template or change the View Type, you will be asked whether you want to keep the current topic positions on the View, or discard them.

   - If you keep the positions, the topics remain in the view where you placed them.
If you discard the positions, all topics in the View are moved back into the Unsorted Topics list.

3. Click **Done**.

The view will be updated to show the new configuration settings.

*Remove an Analysis View from the map*

When you remove an Analysis View from a map, only the view is removed. The map topics and any markers that have already been applied from the view are not affected.

- In the Analysis Window, click the View's tab, and then click **Delete**.

*Save and manage Analysis View templates*

You can save the configuration settings from any View you have created as a template for re-use on other maps. In addition, you can modify any of the standard templates or the templates that you have created, create a new template from scratch, and delete templates.

*Save a template*

To save the current View configuration settings as a template:

- In the Analysis Window, click **Save as Analysis View Template**.

A new template will be created with the current configuration settings. This template will be available on any map, each time you create a new Analysis View or modify an existing View.

*Edit a template*

To edit an existing template:

1. In the Analysis window click **Manage Templates**.
2. In the Manage Templates dialog, select the template you want to change.
3. At the bottom of the dialog, click **Edit**.
4. Modify the information in the Configuration dialog, and then click **Done**.

*Delete a template*

When you delete a template it is deleted from disk, and is no longer available for use on any map.

To delete a template:

1. In the Analysis Window, click **Manage Templates**.
2. In the Manage Templates dialog, select the template you want to remove and then click **Delete**.

*Copy the Analysis View chart*

Once you have conducted your analysis, you may want to show how it was conducted. You can copy any Analysis View chart as a graphic that you can paste into your map or another document to demonstrate your decision-making process.

To copy the chart as an image:
• In the Analysis Window, select the View you want to copy, and then click $\text{COPY}$.

The image of the chart is copied to the Clipboard. You can paste the image into your map or into another document.
Use Outline view

The Outline view allows you to see maps using a familiar visual form so you can read and navigate through the document from top to bottom. This view can be a helpful reference if you are just beginning to use MindManager.

If you plan to use a linear export format, like Word or Project, the outline view can be used to preview the map in a linear arrangement so you can make any necessary adjustments before the export. If you print the map from this view it will be printed in outline form. See Print an outline for more info. You can use the Topic Numbering option to add numbers to your outline before you print it.

**READ NOTE**

Some map elements are not displayed in Outline view: Fill colors, Relationships, Boundaries, Task info, Labels, and Images.

See a map in Outline view

- On the View tab, in the Document Views group, click Outline, or click Outline view on the Status Bar.

The outline view shows a Topics column showing the topic text. You can expand or collapse topics using the + and - icons here. In addition, these other columns are shown:

- **Icons** column, showing all icons assigned to the topic
- **Links** column, showing an icon if one or more links are included with the topic
- **Notes** column, showing an icon if a topic contains notes text
Attached files column indicating whether the topic has attached files.

Right-click on any column heading to choose which columns you want to show or hide.
Click on any of these columns to quickly add, remove or modify this information for the current topic.
Use the **Detail** and **Filter** commands to control which topics are visible here.

**Navigate in Outline view**

You can navigate through topics in Outline view using the mouse or the keyboard:

<table>
<thead>
<tr>
<th>Action</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Click on any topic</td>
<td>Selects the topic</td>
</tr>
<tr>
<td>UP and DOWN ARROWS</td>
<td>Select next or previous topic.</td>
</tr>
<tr>
<td>HOME</td>
<td>Selects first sibling topic.</td>
</tr>
<tr>
<td>END</td>
<td>Selects last sibling topic</td>
</tr>
<tr>
<td>LEFT ARROW</td>
<td>Selects parent topic</td>
</tr>
<tr>
<td>RIGHT ARROW</td>
<td>Selects first subtopic</td>
</tr>
<tr>
<td>SHIFT+click</td>
<td>Select all topics between the current and the previously-selected topic</td>
</tr>
<tr>
<td>CTRL+click</td>
<td>Select or de-select additional topics individually</td>
</tr>
</tbody>
</table>
Use Schedule view

Schedule view lets you quickly assign due dates for topics and tasks in your diagrams. You can also use Schedule view to review previously assigned dates and mark items complete.

You can customize many elements of Schedule view. You have the option of displaying topic formatting, such as shape or font. You can also choose how to sort topics choose whether to show or hide subtopics.

Switch to Schedule view

To switch to Schedule view from another view, click Schedule in the View tab Document Views group, click Schedule in the Task tab, or click Schedule view in the Status Bar.

To return to Map view, click Map View on the Schedule view tab.
Navigate in Schedule view

You can also navigate through schedules efficiently using the keyboard:

<table>
<thead>
<tr>
<th>Keystroke</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrow keys</td>
<td>Select the topic above or below or to the left or right of the current topic. (For left and right arrows, the selection begins at the top main topic after you pass through the central topic to the other side of the map.)</td>
</tr>
<tr>
<td>TAB, SHIFT+TAB</td>
<td>Move to the next or previous topic, callout or subtopic. Use this method to visit each topic on the schedule in order of task dates. Floating topics and callouts attached to relationship lines are skipped.</td>
</tr>
<tr>
<td>BACKSPACE, SHIFT+BACKSPACE</td>
<td>Move back or forward through the history of topics you have selected.</td>
</tr>
</tbody>
</table>

For more information see Keyboard shortcuts.

You can navigate to the earliest assigned start date, end date, or today's date by clicking the Go To pull-down, and choosing the appropriate option.

Orient a schedule

There are several ways to orient the map in Schedule view.

Set the zoom factor for the schedule

Do one of the following:

- **On the Status Bar**: drag the Zoom Factor slider to the desired magnification level, or click Fit Map to fit the whole map into the window.
- **On the View tab**: in the Zoom pull down, click the Zoom In / Zoom Out buttons, or click Fit Map.
- **For wheel-mouse users**: hold the CTRL key and use the wheel to zoom in and out. Press CTRL+F5 to fit the map into the window. Press CTRL+0 for 100% zoom.

If you are working on a large schedule, try using the Mini View window.
Set the Schedule view date range

1. On the Schedule View tab, click View Tools, click Date Range.
2. In the Date Range dialog, click the start date in the From calendar and the end date in the To calendar.

Set the time scale of Schedule view

On the Schedule View tab, click View Tools, open the Time Scale drop-down, and choose a time scale unit.

Assign an unscheduled task a start date

1. On the Schedule View tab, click View Tools, in the Show Topics On group, click Start.
2. Drag the task from the Unscheduled column to the date when you want the task to start.

Assign an unscheduled task a due date

1. On the Schedule View tab, click View Tools, in the Show Topics On group, click Due.
2. Drag the task from the Unscheduled column to the date when you want the task to be due.

Mark a task as complete

1. Click the task.
2. On the Schedule View tab, click View Tools, click Mark Done.

Customize Schedule view

Show or hide topic formatting

1. On the Schedule View tab, click View Tools.
2. In the Topic Formatting group, click Hide to hide topic formatting, such as shapes and fonts, and use standard formatting instead.
   You can reactivate topic formatting by clicking Show.

Show subtopics

1. On the Schedule View tab, click More Options.
2. Check the Show Subtopics Icon box.

Hide parts of the schedule

1. On the Schedule View tab, click More Options.
2. Do any of the following:
   • Check Hide Start & End Dates on Topics.
   • Check Hide Non-Working Days.
• Check **Hide Columns With Nothing Scheduled**.

**Set the calendar location**
1. On the **Schedule View** tab, click **More Options**.
2. Click the **Calendar Location** drop-down, and choose **Bottom** or **Top**.

**Set how topics are sorted**
1. On the **Schedule View** tab, click **View Tools**.
2. Click the **Sort Topics** drop-down, and choose **one** of the following:
   • **Sort By Start Date**
   • **Sort By Due Date**
   • **Sort By Topic Text**
   • **Sort By Priority**
   • **Sort By Progress**
   • **Sort By Resources**
Icon view lets you quickly assign icon to topics and tasks to indicate their priority, progress, status, and more. You can also use Icon view to review previously assigned icons. Maps can be viewed a map based on a variety of icons, including Priority, Progress, Flags, Arrows, Smileys, and more. Priority icons are the default marker in Icon view.

Icon view is customizable. You can move, rename, and delete Icon view columns. There are also options for displaying topic formatting, such as shape or font. You can choose how to sort topic, and choose whether to show or hide subtopics.

In previous versions of MindManager, this feature was called *Priority View*.

**Switch to Icon view**

- To switch to Icon view from another view, click ![Icon](icon.png) in the **View** tab **Document Views** group.

  To return to Map view, click ![Map View](map.png) on the **Icon view** tab.

**Choose an Icon view display mode**

- On the **Icon View** tab, click **View Tools**, and choose a category from the **Icon Group** drop-down menu.

  The view is modified based on the icon category chosen and the number of those icons in the map.

**Assign an icon to an uncategorized task or topic**
• Drag the task or topic from the **Uncategorized** column to the column associated with the icon type that you want to assign.

**Recategorize a task or topic**

• Drag the task or topic from its current icon-type column to another icon-type column.

**Mark a task as complete**

1. Click the task.
2. On the **Icon View** tab, click **View Tools**, and click **Mark Done**.

**Navigate in Icon view**

You can also navigate through Icon view efficiently using the keyboard:

<table>
<thead>
<tr>
<th>Keystroke</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrow keys</td>
<td>Select the topic above or below or to the left or right of the current topic. (For left and right arrows, the selection begins at the top main topic after you pass through the central topic to the other side of the map.)</td>
</tr>
<tr>
<td>TAB, SHIFT+TAB</td>
<td>Move to the next or previous topic, callout or subtopic. Use this method to visit each topic on the map in order of priority. Floating topics and callouts attached to relationship lines are skipped.</td>
</tr>
<tr>
<td>BACKSPACE, SHIFT+BACKSPACE</td>
<td>Move back or forward through the history of topics you have selected.</td>
</tr>
</tbody>
</table>

For more information see [Keyboard shortcuts](#).

**Orient Icon view**

There are several ways to orient Icon view.

**Set the zoom factor for Icon view**

Do **one** of the following:

| On the **Status Bar** drag the Zoom Factor slider to the desired magnification level, or click **Fit Map to fit the whole map into the window.** | Or On the **View** tab, in the **Zoom** pull down, click the **Zoom In / Zoom Out** buttons, or click **Fit Map.** |
On the View tab, in the Zoom pull down, click a value in the Zoom Factor box, or enter a value and press ENTER.

For wheel-mouse users hold the CTRL key and use the wheel to zoom in and out.

Press CTRL+F5 to fit the whole map into the window.

Press CTRL+0 for 100% zoom.

Customize Icon view

Delete Icon view columns
- Right-click the column header, and click Delete

Rename Icon View columns
1. Right-click the column header, and click Rename.
2. Type a new name in the Name box, and click OK

Choose a different icon group for Icon view
1. On the Icon View tab, click View Tools.
2. In the Icon Group drop-down menu, choose an icon group.

Add an icon group to Icon view
1. On the Icon View tab, click View Tools.
2. In the Icon Group drop-down menu, click Add New, and then choose an icon group.

Hide topic formatting
- On the Icon View tab, click View Tools, and in the Topic Formatting group, click Hide.

Show subtopics
1. On the Icon View tab, click View Tools, and click More Options.
2. Check the Show Subtopics Icon box.

Hide a column
1. On the Icon View tab, click Collapse button in the column header. To show the column, click the Expand button.

Set how topics are sorted
1. On the Icon View tab, click View Tools.
2. Click the Sort Topics drop-down, and choose one of the following:
   - Sort By Start Date
• Sort By Due Date
• Sort By Topic Text
• Sort By Priority
• Sort By Progress
• Sort By Resources
Use Tag view

Tag view lets you quickly visualize the status, progress, and issues of elements within a project or workflow. You can sort a map based on tag groups within a map. This feature works well within workflow and process planning.

You can customize many elements of Tag view. You can move, rename, delete, add color to Tag view columns. You also have the option of displaying topic formatting, such as shape or font. You can choose how to sort topics choose whether to show or hide subtopics.

Switch to Tag view

Choose a Tag view display mode

Tag an uncategorized task or topic

Retag a task or topic

Mark a task as complete

Navigate in Icon view

Orient Icon view (pan, zoom or center)

Customize Tag view

Switch to Icon view

To switch to Tag view from another view, click Icon in the View tab Document Views group.

To return to Map view, click Map View on the Icon view tab.

Choose a Tag view display mode

On the Tag View tab, click View Tools, and choose a category from the Tag Group drop-down menu.

Kanban is the default tag group, which allows you to tag tasks as complete (Done) in progress (Doing), or not yet started (To Do). The view is modified based on the Tag category chosen and the number of those Tags in the map.

Tag an uncategorized task or topic

Drag the task or topic from the Uncategorized column to the column associated with the tag type that you want to assign.

Retag a task or topic
• Drag the task or topic from its current tag-type column to another tag-type column.

Mark a task as complete

1. Click the task.
2. On the Tag View tab, click View Tools, and click Mark Done.

Navigate in Tag view

You can also navigate through Icon view efficiently using the keyboard:

<table>
<thead>
<tr>
<th>Keystroke</th>
<th>Action</th>
</tr>
</thead>
</table>
| Arrow keys                 | Select the topic above or below or to the left or right of the current topic.  
                              | (For left and right arrows, the selection begins at the top main topic after you pass through the central topic to the other side of the map.) |
| TAB, SHIFT+TAB             | Move to the next or previous topic, callout or subtopic. Use this method to visit each topic on the map in order of priority. Floating topics and callouts attached to relationship lines are skipped. |
| BACKSPACE, SHIFT+BACKSPACE | Move back or forward through the history of topics you have selected. |

For more information see Keyboard shortcuts.

Orient Tag view

There are several ways to orient Icon view.

Set the zoom factor for Icon view

Do one of the following:

- On the Status Bar drag the Zoom Factor slider to the desired magnification level, or click Fit Map to fit the whole map into the window.

- On the View tab, in the Zoom pull down, click the Zoom In / Zoom Out buttons, or click Fit Map.

- For wheel-mouse users hold the CTRL key and use the wheel to zoom in and out.
  - Press CTRL+F5 to fit the whole map into the window.
  - Press CTRL+0 for 100% zoom.
Customize Tag view

Set how topics are sorted
1. Right-click the column header.
2. Click the Sort Topics drop-down, and choose one of the following:
   - Move Left
   - Move Right

Delete Tag view columns
- Right-click the column header, and click Delete

Rename Tag View columns
1. Right-click the column header, and click Rename.
2. In the Marker Properties dialog, open the Color picker, and choose a color.

Add color to a Tag View column
1. Right-click the column header, and click Add Tag Color.
2. In the Marker Properties dialog, open the Color picker, and choose a color.

Add a tag group to Tag view
1. On the Tag View tab, click View Tools.
2. In the Tag Group drop-down menu, click Add New, and then choose a tag group.

Hide topic formatting
- On the Tag View tab, click View Tools, and in the Topic Formatting group, click Hide.

Show subtopics
1. On the Tag View tab, click View Tools, click More Options.
2. Check the Show Subtopics Icon box.

Hide a column
1. On the Tag View tab, click Collapse button in the column header. To show the column, click the Expand button.

Set how topics are sorted
1. On the Tag View tab, click View Tools.
2. Click the Sort Topics drop-down, and choose one of the following:
   - Sort By Start Date
   - Sort By Due Date
• Sort By Topic Text
• Sort By Priority
• Sort By Progress
• Sort By Resources
Collapse and expand topics

Collapse or expand topics to help focus on specific topics. The map prints and exports as displayed - collapsed topics are not expanded before printing or exporting.

When viewing the map, you can also Focus on a specific topic.

You can also use keyboard shortcuts to adjust the map's level of detail.

The collapse and expand features are disabled for flowcharts.

Collapse or expand topics

You can collapse and expand individual topics interactively using the "+" and "-" icons that appear on each topic with subtopics. This can be convenient while working on a map or to open or close individual topics on smaller maps during a meeting.

Press CTRL as you click the expand or collapse icons to cycle through the topic levels one level at a time.

Press SHIFT as you click the expand or collapse icons to show all levels or collapse all levels.

Subtopic counter

When topics are collapsed, the expand icon (previously a "+" symbol) converts to a number icon (for example, 2), indicating the number of unseen subtopics in the collapsed branch:
The subtopic counter is enabled by default. You can disable or re-enable it.

1. Right click either the collapse icon ("–") or the number icon to open the context menu.
2. In the context menu, uncheck **Count Subtopics** to disable the subtopic counter; check **Count Subtopics** to enable it.

**Expand to a specific level**

In some views, you expand or collapse topics to a specific level by using the menu and toolbar commands.

1. Select a topic or topic(s).
2. Do **one** of the following:

<table>
<thead>
<tr>
<th>Action</th>
<th>Keystroke</th>
<th>Click</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>On the Status Bar</strong>, click the Expand arrow, and then click the command you want to use.**</td>
<td><strong>CTRL + D</strong></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
<tr>
<td><strong>Or</strong></td>
<td></td>
<td><strong>On the View tab, in the Detail group, click the Expand arrow, and then click the command you want to use.</strong></td>
</tr>
<tr>
<td><strong>Collapse topic</strong> - hides the subtopics but does not collapse them individually.**</td>
<td></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
<tr>
<td><strong>Collapse branch</strong> - collapses all the subtopics individually and then hides them.**</td>
<td></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
<tr>
<td><strong>Collapse map</strong> - collapses all the subtopics and shows only main topics; centers the map**</td>
<td></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
<tr>
<td><strong>Next Level</strong> - expands the topic by one level**</td>
<td></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
<tr>
<td><strong>1 Level, 2 Level, All Levels</strong> - shows 1, 2, or all levels**</td>
<td></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
</tbody>
</table>

**Read hint**

Using the collapse commands with the Central Topic selected always shows the main (first-level) topics.

**Use collapse or expand shortcuts**

<table>
<thead>
<tr>
<th>Action</th>
<th>Keystroke</th>
<th>Click</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Show next level</strong> (expand one level at a time)**</td>
<td><strong>CTRL + D</strong></td>
<td><strong>CTRL + ⌘ or ⌘</strong></td>
</tr>
</tbody>
</table>

198
<table>
<thead>
<tr>
<th>Action</th>
<th>Key Combination</th>
</tr>
</thead>
<tbody>
<tr>
<td>Collapse topic</td>
<td>ALT + SHIFT + 0</td>
</tr>
<tr>
<td>Show level 1</td>
<td>ALT + SHIFT + 1</td>
</tr>
<tr>
<td>Show level 2</td>
<td>ALT + SHIFT + 2</td>
</tr>
<tr>
<td>Show level 3... etc. Up to level 9</td>
<td>ALT + SHIFT + 3 ... etc.</td>
</tr>
<tr>
<td>Show all levels</td>
<td>ALT + SHIFT + . (period)</td>
</tr>
<tr>
<td>Collapse Branch</td>
<td>ALT + SHIFT + , (comma)</td>
</tr>
<tr>
<td>Collapse Map</td>
<td>CTRL + F3</td>
</tr>
</tbody>
</table>
### Work with HTML5 maps

The HTML5 map export option allows you to easily share the content of your maps with anyone, leveraging the rich interactive format available in MindManager.

Note that not all map elements are supported. See the HTML map feature support table for more details.

HTML5 maps open in their own windows in your preferred browser.

There are two viewing modes: Standard View and Presentation View.

Exported maps using the new HTML5 format can be opened in any major browser. See [Supported environments](#) for details.

The user interface supports English, French, German, and Russian. The language is selected based on the system/browser language settings.

Map content can be exported in any language.

---

### Change viewing modes

There are two viewing modes: [Standard View](#) and [Presentation View](#). By default, when you export a map, it opens in Standard View. When you publish a map, it opens in Presentation View.

In either view mode, click the **Menu** button, and choose either **Presentation** or **Standard** in the **View Mode** area.

### Navigate a map in Standard View

![Standard View](image-url)
By default, maps open in Standard View, which allows you to expand and collapse the branches of the map and focus on a particular topic with one click. When you hover on a map item or the various controls in the window, tooltips inform you of the features under your pointer. Notes, links, and other information displays in a sliding pane on the right.

**Overview of the Standard View map window**

The Standard View map reader window offers the following navigation and viewing controls:

<table>
<thead>
<tr>
<th>Bottom left</th>
<th>Main menu</th>
<th>Opens a sliding pane on the left that gives access to settings for switching viewing modes, printing, getting help, and more viewing options.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bottom left</td>
<td>Search</td>
<td>Allows you to search for text in the map.</td>
</tr>
<tr>
<td>Bottom left</td>
<td>Collapse</td>
<td>Collapse map and focus on central topic.</td>
</tr>
<tr>
<td>Bottom left</td>
<td>Transform</td>
<td>Contains commands for collapsing (Collapse All) and expanding (Expand All) topics; centering map on topic, expanding selected branch, and collapsing all other branches (Focus); adjusting the size of the map in its current display to the dimensions of the window (Fit).</td>
</tr>
<tr>
<td>Bottom right</td>
<td>MindManager link</td>
<td>Opens the official MindManager product web page.</td>
</tr>
<tr>
<td>Right</td>
<td>Filter pane or Content Inspector pane</td>
<td>Allows you to filter a map by icons and tags or to select a topic and view information about its contents.</td>
</tr>
<tr>
<td>Right bottom</td>
<td>Zoom slider</td>
<td>Magnifies or reduces the size of the map in the window.</td>
</tr>
</tbody>
</table>

**Standard View keyboard shortcuts**

<table>
<thead>
<tr>
<th>Navigation</th>
<th>Arrow keys</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select topic above, below, left or right</td>
<td>Home</td>
</tr>
<tr>
<td>Move to top-level sibling topic</td>
<td>End</td>
</tr>
<tr>
<td>Move to bottom-level sibling topic</td>
<td></td>
</tr>
</tbody>
</table>
### Viewing

<table>

Navigate a map in Presentation View

Presentation View provides easy-to-use navigation controls, so your audience can focus on the diagram content. Presentations start at the top-right topic and move down through the topics on the right side of the map. If there are topics on the left side of the map, the presentation moves from the bottom-most topic on the right to the top-left topic.

For organizational charts, the presentation starts at the top. When there are multiple topics on the same level, focus starts on the right and moves left.

For flowcharts, concepts maps, and floating topics, the presentation goes in the order the topics were created.

When you hover on a map item or the various controls in the window, tool tips inform you of the features under your pointer. Notes, links, and other information displays in a sliding pane on the right.

Overview of the Presentation View map window

The Presentation View map reader window offers the following navigation and viewing controls:

<table>
<thead>
<tr>
<th>Bottom left</th>
<th>Main menu</th>
<th>Opens a sliding pane on the left that gives access to settings for switching viewing modes, printing, getting help, and more viewing options.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bottom center</td>
<td>Restart</td>
<td>Restarts the presentation at the first topic.</td>
</tr>
<tr>
<td>Bottom center</td>
<td>Back</td>
<td>Moves focus to the previous topic in the presentation.</td>
</tr>
</tbody>
</table>
### Work with Maps

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Start</strong></td>
<td>Launches the map presentation.</td>
</tr>
<tr>
<td><strong>Search</strong></td>
<td>Allows you to search for text in the map.</td>
</tr>
<tr>
<td>+ (zoom in)</td>
<td>Magnifies the size of the map in the window.</td>
</tr>
<tr>
<td>- (zoom out)</td>
<td>Reduces the size of the map in the window.</td>
</tr>
</tbody>
</table>

**Bottom right**

- **Help button**: Opens this help topic in MindManager Help.

**Right**

- **Content Inspector pane**: Allows you to select a topic and view information about its contents.

**Right bottom**

- **Zoom slider**: Magnifies or reduces the size of the map in the window.

### Filter HTML5 maps

1. In Standard View, click **Filter** on the right side of the window. Any type of icon in the map is displayed in the Filter pane.
2. Enable any of the corresponding check boxes.
3. In the Match area, enable either **Any** or **All**.
4. Click one of the following filtering options:
   - **Show**
   - **Fade**
   - **Hide**

Saved filters and queries in MindManager maps can be viewed in HTML5 maps. By default, HTML5 maps open with the save filter or query applied. To view the map without the filter, move the **Saved Filter** slider in the Filter pane to **Off**.

### View topic information in HTML5 maps

1. Select the topic.
   - If the topic contains additional information, a button corresponding to that type of information is highlighted on the right side of the window:
     - Task Information ✅, Icons ✙, Comments 📝, Tags 📌, Properties 🔍, Notes 📖, Attachments & Links 📦, Related Topics 🔗.
   - Click the highlighted button to view the details of the additional information in corresponding Content Inspector pane.
**Supported environments**

<table>
<thead>
<tr>

Filter Maps

Filter topics

What do you want to do?

- Show a branch alone
- Filter topics directly
- Fade topics
- Use instant Task Filters
- Filter topics by properties and text (Power Filter)
- Remove a filter
- Ignore filtering for selected topics

See also:
- Use Map view
- Markers

Filtering is a convenient way to view only a subset of the topics on your map. This eliminates the need to delete topics that are not currently of interest, but remain valid map content.

Filtering effects how the map is displayed in Map view, Outline view, Linked Maps view and Walk Through view. By default, the filter is also applied to the Gantt Chart view.

There are four ways to filter your map:

1. **Show branch alone**: select a topic and then use this command to show the branch only, (the selected topic and its subtopics) without the central topic, parents or siblings.

2. **Direct filtering**: select a set of topics and then use the **Show**, **Hide**, or **Fade** commands to show, hide, or fade those topics.

3. **Use instant Task Filters**: these are shown in the **Show** or **Hide** pull-down menus, and allow you to filter the map’s topics based on specific task conditions.
4. Use Power Filters: available from the Show or Hide pull-down menu, this command lets you specify the filter criteria (including a variety of properties and text) to use.

**Read Hint**

You can also use the Quick Filter command to simply show or hide topics coded with a specific icon or tag.

Filtering is cumulative. Topics that are already hidden remain hidden when you apply a new filter. You must remove any filter you've previously applied to apply a new filter to all the map topics. The filter indicator is displayed at lower-left, and the Remove Filter command (on the View tab, and in the Filter group) is active when a filter is active.

When the map is saved, it is saved in a filtered state. All topics are still in the map, but hidden topics are not visible until you remove the filter. You can save a copy of the filtered map - topics hidden by the filter are not included in the new copy of the map.

You can also choose to ignore the filter on selected topics. These "ignored" topics will be identified in Elements list in the Map Index.

**Read Hint**

You can choose to show or hide other classes of map elements using the Show / Hide command.

---

**Show a branch alone**

You can show a branch by itself to focus attention on a specific topic. This is especially useful for presenting larger maps in meetings, to enable the viewer to see the topic's details without being distracted by the rest of the map.

The Show Branch Alone command shows only the selected topic and its descendants.

1. Select a topic.

2. On the View tab, in the Filter group, click the Branch pull down and select Show Branch Alone.

Press F4.

The filter indicator displays at lower left.
Show topics one level higher

1. On the View tab, in the Filter group, click the Branch pull down.
2. Click Show One Level Up.

You can continue to reveal levels in this way until you reach the map’s central topic.

Show all topics

To see the hidden parent topics again, do one of the following:

- Right-click the filter indicator and then click Show Other Branches
- On the View tab, click Show Other Branches.

Filter topics directly

You can filter topics directly by selecting topics to show or hide, or by selecting a single topic to display, along with all its descendants. To filter topics based on their properties use the Power Filter option.

Show or hide a set of topics

1. Select the set of topics or elements on the map.
2. On the View tab, in the Filter group, click Show or Hide.

   - Show shows only those topics that are selected (hides all those that are not selected)
   - Hide shows only those topics not selected (hides all those that are selected)

Filtering is cumulative. If you add more topics to the map, or you want to further refine your view of the map, you can filter the remaining visible topics.

Fade topics

The Fade command fades topics that meet the filter criteria, while the rest appear unchanged. This allows you to see filtered topics in context of the entire map.

Fade a set of topics

1. Select the set of topics or elements on the map.
2. On the View tab, in the Filter group, click Fade.
3. Choose the criteria type and specify your match criteria.

Filtering is cumulative. If you add more topics to the map, or you want to further refine your view of the map, you can filter the remaining visible topics.

Use instant Task Filters
Task Filters provide a convenient way to see tasks that meet specific criteria. You do not need to select a topic to use these filters - they filter all the topics on the map.

1. On the **View** tab, in the **Filter** group, click the **Show** or **Hide** pull-down.
2. Click the Task Filter you want to use.

Topics that match the filter criteria will be shown or hidden.
Filtering is cumulative. If you add more topics to the map, or you want to further refine your view of the map, you can filter the remaining visible topics.

**Filter topics by properties and text**

The **Power Filter** command lets you filter a set of topics based on a query to match the properties you specify by selecting match criteria. You can choose to:

- **Show** only those topics that match the criteria (hides non-matching topics)
- **Hide** topics that match the criteria (shows only non-matching topics).

**READ HINT**

You can also use the **Quick Filter** command to show or hide topics that contain a specific icon or tag markers.

**Use the Power Filter command**

1. On the **View** tab, in the **Filter** group, click the **Hide** or **Show** arrow.
2. Click **Power Filter**.
3. Do one of the following:
   - Choose the criteria type and specify your match criteria. Note that you can select a combination of properties from different categories.
   - Or
   - Click **Saved Queries** to use match criteria stored as a Saved Query, or to save your current selections as a Saved Query that you can use again.
4. Check **Expand branches to show all matches** if you want branches that contain matches to expand automatically.
5. Check **Remove filter first** if you want to remove a filter you have already applied. (You'll see the filter indicator at lower-left if you have a filter applied.)
6. Click **Filter**, and then click **Hide Matching Topics** or click **Show Matching Topics**.

**READ HINT**

Filtering is cumulative. If you add more topics to the map, or if you want to further refine your view of the map, you can filter the remaining visible topics.
Remove a filter (show the whole map)

When a filter is active the filter indicator is displayed at lower left.

Do one of the following:

Right-click the indicator, and then click Remove Filter.

Or

On the View tab, in the Filter group, click Remove Filter.

Or

Right-click the map’s workbook tab and click Remove Filter.

Read Hint

If you used the Show Branch Alone command to hide other topics, you must click Show Other Branches to see the whole map again.

Ignore filtering for selected topics

You can disable filtering on a specified topic (or topics) so that they will not be including in the filtering:

- Select the topic or topics, then do one of the following.

  Right-click a selected topic and in the context menu, select Options, then select Ignore Filters.

  Or

  Right-click a selected topic and on the mini-toolbar, click the Options icon and select Ignore Filters.

Read Hint

Ignore Filters does not affect topics filtered using Show Branch Alone.

View topics ignored by filters

Once "Ignore Filter" has been applied to a topic, it is displayed in the Map Index pane Elements list in the Ignored by Filters group. Need to locate an ignored topic quickly? Clicking a topic in the Ignored by Filters group will navigate to that topic in the map.
Use the Map Index

The Map Index pane displays a pivot view that shows your map topics categorized by their markers and elements, providing a fast and easy way to see and navigate to your map's important content. You can use the controls at the top of the pane to view the Markers list or Elements list, and customize the view. In the Markers list you can also add new markers and marker groups, paste an existing marker group, and add a legend to the map.

**See also:**
- Markers
- Task Info
- Manage Markers

Use the Map Index pane

To see the Map Index task pane:

- Click the Map Index button on the Home or Insert tab in the Markers group.
  
  **READ NOTE**
  
  If you do not see this button on the ribbon, you may need to enable the Map Index add-in.

- To choose a view, click the Markers button or the Elements button.
- The customize the view, click the View pull-down.

To select a topic from the list in your map:

- Click any topic in the pane to immediately select the topic in the map (especially useful for navigating in large maps).
  
  **READ NOTE**
  
  Topics that are hidden by a Filter are not displayed in either list.
Format and Layout

Map layout

The arrangement of topics is controlled by the map’s general layout options.

The layout options let you control:

- growth direction - map, tree, org-chart, or flowchart layout
    
    **READ NOTE**
    
    The flowchart layout option is only displayed in the Layout pull down if you are working from a flowchart template.

- line style - the shape of the connecting lines
- line anchor - the originating point on the parent topic for subtopic connecting lines
- spacing - the distance from the parent topic to its subtopic and the distance between its sibling topics

You can align a set of topics, and enable an option to snap topics and objects to a pre-defined grid.

---

*Change the general layout of the map*

The **General Layout** options are only available if you have the central topic selected. These options apply to the entire map. You can only set these options in Map View.

**READ NOTE**

The **General Layout Options** tab is not available if you are using a flowchart.

1. Select the central topic.
2. On the **Format** tab, click the **Object Format** dialog launcher. Or, click the Topic Shape arrow and select Format Topic.
3. On the **General Layout** tab, choose the desired attributes for the map.
   - **Organic appearance** makes the main topic connecting lines look more like hand-drawn lines.
   - **Display shadow** adds a shadow to the topic connecting lines and topic shapes.
   - **Main Topic Line Width** controls the thickness of lines connecting the central topics and main topics.
   - **Main Topic Spacing** controls the spacing between the main topics.
4. Click the **Map Theme** button if you wish to save these settings as theme defaults for this map, or re-set the topic’s formatting to the default formatting from the theme.

**READ HINT**

To distribute main topics evenly around the central topic, right-click on the map background, and then click **Balance Map**.

*Change the layout of subtopics*

These options apply to the subtopics of the currently selected topic, or to the whole map if you select the Central Topic. You can only set these options in Map View.

*Growth direction and line style*

1. Select the topic(s).
2. To change growth direction: On the **Format** tab, click the **Object Format** dialog launcher. Select the Subtopics Layout tab, then click the desired growth direction.
3. To change line style: On the **Format** tab, in the **Object Format** group, click **Layout** to change the layout, and click the **Lines** pull down, then select the desired line style.

**READ HINT**

Or, you can right-click a topic and use the **Layout** and **Topic Lines** commands in the mini-toolbar.

**READ NOTE**

The **Lines** pull down is not available if you are using a flowchart.

For Org-chart topics, the **Layout** growth direction applies to 3 levels by default, but you may choose the number of levels to include. Topics below this level return to Map topics unless you specify a different format for them.

The **Line** style command is disabled for flowchart topics; however, if there are regular map topics included in the flowchart, **Line** style will function *for those topics only.*

*More layout options*

1. Select the topic(s).
2. On the **Format** tab, click the **Object Format** dialog launcher.
3. Change the settings on the **Subtopics Layout** tab to meet your needs.

**READ HINT**

Some experimentation may be required to get just the right "look" for your map - click **Apply** to see how your settings will look without leaving the dialog.

4. Click the **Map Theme** button if you wish to save these settings as theme defaults for this map, or re-set the topic’s formatting to the default from the theme.
Align topics
You can align two or more topics with each other.

1. Select two or more topics.
2. Do one of the following:

   On the **Format** tab, in the **Layout** group, click the **Align pull down, then Select Align Topics.**

   OR

   For a flowchart topic: right click, then select **Align Topics.**

3. Select how you want the topics aligned on the map.

Format topics
The automatic formatting for topics on the map is determined by the map's **theme**. It’s a good idea to decide on an overall look for your map before formatting topics individually. You can apply a suitable Map Theme or modify the current theme to suit your needs.

After selecting a theme you can apply formatting to topics and other objects on the map. The formatting you choose is applied to the currently selected topics or objects.

For information about formatting objects, see **Format objects**.

To format topics, you can:

- select it and then use the buttons on the ribbon
- right-click a topic to see the mini-toolbar with formatting commands

The mini-toolbar for map topics:  The mini-toolbar for flowchart topics:

- select an object (such as a relationship or boundary) and press ALT+ENTER, or double-click to see the formatting options

When you set new formatting options in the format dialogs, you can save the settings as the new default formatting for that object type in the current map's theme.

To format your map quickly, you can select multiple topics when you apply formatting. The Format Painter lets you transfer formatting between topics, boundaries or relationships. If you find yourself using a particular set of formatting attributes frequently, you can create a **topic style** with these attributes for easy re-use on other topics.

Some formatting options (font color, fill color) can be used as map markers to classify topics on your map (for example a topic in green text means "Michael's task"), but you can also use these
attributes casually to add visual interest and clarity to your map. See Map markers for more information on using these attributes as markers.

Set the topic shape and color

You can set the topic shape and fill color for individual topics using the commands on the Format tab, in the Object Format group, or on the mini-toolbar. More options (such as transparency and using a custom shape) are available from the Object Format dialog launcher.

You can only set these options when viewing the map.

Change topic shape and color

1. Select the topic(s).
2. To change the shape, do one of the following:
   - On the Format tab, in the Object Format group, click the Topic Shape arrow.
   - OR
     - For a flowchart topic: right click, then select Topic Shape.
     - List of flowchart shapes

3. Then click a topic shape, or click Image from Library ▼.
   - The Library pane will open, displaying the Shapes folder.
   - Click a shape in the lower pane.
   - Line color and Fill color do not apply to custom shapes.
   - ✓ You can adjust the content margins for any shape.

4. To change fill or line color, do one of the following:
   - On the Format tab, in the Object Format group, click Fill Color or Line Color.
   - OR
     - For a flowchart topic: Right click, then select Fill Color or Line Color.

5. On the Format tab, in the Object Format group, click Fill Color or Line Color.
   - ✓ READ HINT

   Or, you can right-click the topic and use the mini-toolbar's Topic Shape, Line Color, and Fill Color options.

Your choice of Line color effects the topic's connecting lines and shape outline color. The Fill color is used inside the topic shape or as a highlight (for topics without shapes). You can set the fill transparency using the Object Format dialog launcher.

✓ READ HINTS

Fill colors can be used as map markers to classify topics on your map (for example a topic in with red fill means "critical task"). See Markers for more information on using markers.

You can enable or disable gradient fills using the Visual Effects options.
More shape and color options

1. On the **Format** tab, click the **Object Format** dialog launcher.
2. On the **Shape and Color** tab, choose the desired attributes for the topic.
   - You can set the **Fill Transparency** here.
   - You can use a **Custom Image shape**.
     a. Under **Custom image shape** click **Select Image**, then navigate to the image file and click **Insert**.
     b. If you want to save this image to the MindManager Library for re-use, click **Save Image**, navigate to the target folder, then click **Save**. If you save the image to the default location, it will appear in the Library's **Shapes** folder.
     c. The image is used for the topic shape, and will stretch or compress to accommodate the topic text. The topic text is superimposed over the shape.
3. Click the **Map Theme** button if you wish to save these settings as theme defaults for this map, or re-set the topic's formatting to the default from the theme.

Set the topic font

You can set the font face and font attributes for a single topic, and the capitalization style for all topics. The Capitalization settings are map theme settings, and so, they apply to existing topics and all new topics you create. You can set these options when viewing the map or in Outline View.

Change the topic font

1. Select the topic (s).
2. On the **Format** tab, in the **Font** group use the commands to change the topic font's attributes.

   ![Read Hints](https://example.com/hints.png)
   **Right-click the topic and use the mini-toolbar commands.**
   **Font colors can be used as map markers to classify topics on your map (for example a topic in green text means "Michael's task").** See [Markers](#) for more information on using markers.

Change topic text capitalization

1. Select a topic.

<table>
<thead>
<tr>
<th>Selected topic</th>
<th>Changes capitalization for</th>
</tr>
</thead>
<tbody>
<tr>
<td>Central Topic in a map</td>
<td>Central topic only</td>
</tr>
<tr>
<td>Main Topic in a map or Topic or Decision in a flowchart</td>
<td>All Main Topics only</td>
</tr>
</tbody>
</table>
Callout Topic | All callout topics only
Floating Topic | All floating topics
Subtopic, floating-topic subtopic, callout subtopic | All subtopics at this level and their subtopics

2. On the Format tab, click the Font dialog launcher.
3. On the Capitalization tab, choose the capitalization style for topics.
4. Click the Map Theme button if you wish to save these settings as theme defaults for this map, or re-set the topic's formatting to the default from the theme.

**READ HINT**

You can apply different styles of capitalization to various subtopic levels. For example, if the capitalization was already set for subtopics at level 4 and beyond, setting the capitalization with a level 2 subtopic selected will only affect levels 2 and 3. The capitalization for level 4 and beyond remains unchanged.

*Set default placeholder text*

1. On the Design tab, click Edit Default Text.
2. In the Edit Default Text dialog, enter new placeholder text in the corresponding topic field.

*Set topic size*

There are a number of options for controlling the size of topics. You can choose to automatically resize topics based on their contents or set a specific topic size for individual topics. You can give a map a cleaner look and make it more presentable by increasing the size of smaller topics to match the width of the largest topic within the same branch. It also aligns the beginning of text in each level.

*Size topics based on their contents*

1. Select a topic or multiple topics, right-click and choose Format Topic.
2. In the Format Topic dialog, click the Size and Margins tab.
3. Enable the Automatic Topic Size option.

*Set the size of a specific topic*

1. Select a topic or multiple topics, right-click and choose Format Topic.
2. In the Format Topic dialog, click the Size and Margins tab.
3. Enable the Fixed Topic Size option and set the topic size in the Height and Width boxes to create topics of a specific size.
If the amount of content exceeds the size of the topic, the content is truncated and a blue triangle appears in the lower right corner of the topic. You can view the whole topic by hovering over the icon.

**Match topic widths**

Do one of the following:

- On the **Format** tab, click the **Match Width** arrow, and choose **Match Width for All Topics**.
- Select multiple topics, then on the **Format** tab, click the **Match Width** arrow, and choose **Match Width for Selected Topics**.
- Select a topic branch, then on the **Format** tab, click the **Match Width** arrow, and choose **Match Width for Selected Branch(es)**.

To reset topics to their original width, choose **Reset Widths**.

**Set default line thickness**

You can set the default connector-line thickness in central topics, main topics, floating topics, callout topics, org-chart topics, and all levels of subtopics.

1. Right-click the central topic, and choose **Format Topic**.
2. In the Format Topic dialog, click the **General Layout** tab.
3. Choose one of the following options from the **Line thickness applies to** drop-down list:
   - **All Topics** — applies to lines to all topics
   - **Main Topic Lines** — applies to lines between the central topic and main topics
   - **Organic Lines** — thickness settings for topic levels below the central topic are ignored

**Set default topic style**

You can set the default style for topics of the same type.

1. Select the topic containing style to set as the default style.
2. On the **Format** tab, click **Set Default Style**.

To reset the topic style to the default theme, select a topic and click **Reset to Default** on the **Format** tab.

**Number topics**

The Topic Numbering command can be used in Map View or Outline View to add a numbering scheme to the subtopics of the selected topic. If the central topic is selected the numbering is applied to the whole map.
Numbering is disabled for flowcharts.

1. Select one or more topics whose subtopics you want to number. (Numbering can only be applied to topics with subtopics).
2. Do one of the following on the Insert tab, in the Topic Elements group:

   - Click the Numbering arrow and choose the type of numbering to use.
   - Click the Numbering arrow, click Numbering Options, choose the options you want to use, then click OK.
   - Click Numbering to number the map with the current options.

Numbering is added at the start of the topic text for all subtopics up to the specified depth. If you add, remove, or reorganize topics your map will be automatically renumbered. If you switch to Outline View, the same numbering scheme will be used for your outline.

![Read Note]

Once numbers are added they cannot be directly edited. (You can still edit the rest of the topic text.) If you want to delete the numbers you must use the Remove Numbering command to delete the numbering.

![Read Hint]

You can apply different types of numbering to different sections of your map.

You can change, expand or reduce the numbering scheme at any time by repeating the initial numbering steps. If you add numbering for a topic (or the entire map) that already contains numbered subtopics, the new numbering scheme will override the old and the subtopics will be renumbered.

Remove numbering

1. Select the root topic for the numbering.
   - If you numbered the whole map or outline at once you should select the central topic.
   - If you numbered a portion of your map or outline, and you want to remove this portion's numbers, you must select the root (source) topic of the numbered section.
   - If you numbered the whole map or outline first, and then re-numbered several sections separately you can remove all the numbering by selecting the Central Topic.
2. On the Insert tab, in the Topic Elements group, click the Numbering arrow, then click Remove Numbering.

Notes on exporting numbered maps ▼

Numbering is included:

- When you Print the map or outline.
- When you copy the topics to a new map.
- When you export the map to a PDF file, a graphics file (BMP, GIF, JPG, etc.) Excel spreadsheet, or a Word document.

**Read Hint**

You can choose your own numbering scheme that is independent from the map numbering during **Word Export**.

**Numbering is ignored:**

- When you export your map or topics to **PowerPoint**. Any map images used in your PowerPoint slides will still show the map numbering, but the slide content will not.
- When you export tasks to **Outlook** or **Project**.
- When you save your map as an **outline** (using the Save As command) in either plain text or html format. Numbering is replaced by automatic numbering (1, 1.1, 1.11 etc...)
- When you save your map as Web pages: The text is not numbered (or numbered independently if you use one of the web export options to add numbering).

*Include hidden topics in numbering*

By default, hidden topics are excluded from topic numbering. However, you can modify map settings to include topics hidden by filters.

1. Do **one** of the following:

   On the **File** tab, click **Info**, and then click **Map Settings**.  
   Or  
   Right-click the map’s workbook tab, and choose **Map Settings**.

2. Disable the **Renumber topics when there are topics are hidden by filters** check box

*Topic size and margins*

You can set the topic size and margins for individual topics using the **Object Format** dialog launcher. You can only set these options in Map View.

1. Select the topic(s).
2. On the **Format** tab, click the **Object Format** dialog launcher.
3. On the **Size and Margins** tab, choose settings to apply to a standard topic shape. If a Custom shape is used, you'll see a preview image where you can set the text area. **Padding** applies to topics with images. The measurement units used (in or mm) are set using MindManager’s **General** options.

**Read Hint**
Some experimentation may be required to get just the right "look" for your map - click **Apply** to see how your settings will look without leaving the dialog. Also, some settings, such as **Preferred Width**, which controls the width at which text wraps, will not display until you add content.

4. Click the **Map theme** button if you wish to save these settings as theme defaults for this map, or re-set the topic's formatting to the default from the theme.

**Topic text and image alignment**

You can set the topic text and image alignment for individual or multiple topics in a variety of ways. You can only set these options in Map View.

**Change the alignment of topic text and images**

1. Select the topic(s).
2. For text alignment, on the **Home** tab or **Format** tab, in the **Font** group, click the **Alignment** arrow and select how you want the text aligned within the topic.
   - **Read Hint**
   
   Or, you can right-click the topic and use the alignment command in the mini-toolbar.
3. For image alignment, in the **Format** tab, **Object Format** group, click the **Align** pull down, then select **Align Image** to set the options.
   - **Read Hint**
   
   You can drag an image inside the topic to change its placement.

You can click the **Theme** button here if you wish to save these settings as the formatting defaults for this map, or re-set the topic's formatting to the default for the theme.

**Format boundaries and relationships**

When you select a boundary or a relationship, the formatting options on the Format tab are enabled, and you can use these to change the object's appearance. See **Boundaries** and **Relationships** for information on further modifying these objects.

Additional options are available when you right-click on the object, and then click Format Boundary or Format Relationship (or double-click, or select the object and press ALT+ENTER).
1. Select the formatting options you want to use.
2. To see how the boundary or relationship will look, click **Apply**.
3. Click the **Map Theme** button if you wish to save these settings as formatting defaults for this map, or re-set the object's formatting to the default from the theme.

**Use the Format Painter**
The Format Painter transfers format settings from one object (the source object) to another (the target object). Usually, you will paint the format to another object of the same type (e.g. from one topic to another, or from one text selection to another), but you can also paint the format to a different object type (e.g. from a boundary to a topic). In the second case, only the types of formatting supported in the target object will be applied.

**Format a single object with the Format Painter**

1. Select the object or text whose format you want to duplicate (the source object).
2. On the **Home** tab, in the **Clipboard** group, click **Format Painter**. You'll see the cursor change to a paintbrush.

   **READ HINT**
   
   Or, you can right-click the topic and use the Format Painter command in the mini-toolbar.

3. Paint the format to the target object(s):
   - Click on the target object.
   - For text, drag to select the target text.

**Format multiple objects with the Format Painter**

- On the **Home** tab, in the **Clipboard** group, click **Format Painter**, then press CTRL and click to paint the same format on several objects.
- On the **Home** tab, in the **Clipboard** group, double-click **Format Painter**, then click to paint the same format on several objects.

**Stop the Format Painter**

- Click on an empty space on the map.

   **READ HINT**
   
   Press ESC.

If you find yourself using the Format Painter to apply the same formatting to a large part of the map, you may want to consider creating a topic style or modifying the map's theme settings (the automatic map formatting) to achieve the same effect more easily.

**Remove formatting**

You can remove the formatting that you have applied to any map object and return it to the default formatting (determined by the map's theme).

1. Select the topic or the text within a note or topic.

   **READ HINT**
Or, for regular map topics, you can right-click a topic and use the Clear Formats command in the mini-toolbar. (This command is not present on the flowchart topic mini-toolbar.)

2. On the Home tab, click the Delete button, and then select Formats.

Format the map background

MindManager comes with a wide assortment of suitable background images designed to enhance the look of your map. You can add these background images from the MindManager Library pane, or use your own image from a file. You can combine a background image with a solid color by adjusting the image transparency.

Add a background from the Library

1. Right-click the map background, click Background, and then click Assign Image from Library
2. In the Library pane, locate the image you want to use.
3. Click the preview image in the lower part of the Library pane to add the image to your map.

Add a background image from a file

You can use a background image from a file in one of the following formats: bmp, emf, wmf, gif, jpeg/jpg, pcx, png

1. Do one of the following:
   - On the Design tab, click Edit Background.
   - Right-click the map background, click Background, and then click Background Properties.
2. Click Select Image and navigate to the image file.
3. You can drag an image from a file list (for example, from Windows Explorer) into the image preview area in the dialog to add it as a map background.

Change background color, transparency and image tiling

1. Do one of the following:
   - On the Design tab, click Edit Background.
   - Right-click the map background, click Background, and then click Background Properties.
2. Select the background Color if desired.
3. Select a background image file. (If you've already selected an image, you'll see its name here.)
   You can use transparency to "fade" it so it doesn't detract from the map.
4. The image will be tiled according to the Tile options you select.
5. Set the image transparency (0% is opaque).

✓ Read Hint

The background image is drawn on top of the color, so if you make the image semi-transparent, the background color will show through.
Remove the background

1. Do one of the following:
   - On the Design tab, click Edit Background.
   - Or
   - Right-click the map background, click Background, and then click Background Properties.

2. To remove the image, click Remove Background Image.
3. To remove the color, set the Color to None.
Use topic styles

A topic style is a set of formatting attributes that can be saved with a unique name, and repeatedly applied to topics. Topic styles are saved with the map, and can be applied and managed from the Topic Styles pane. You can also apply topic styles from the Object Format group on the Format tab.

Creating a named topic style makes a distinct set of formatting attributes easily available, and the topic style can easily be applied to many topics (in contrast to using the Format Painter, which is suited to copying the format from a single topic to another). The formatting used by a topic style can be modified, and all topics using the style will reflect the new formatting.

The map's default format settings, including its topic styles, can be saved in a Map Theme and re-used on other maps.

- **READ HINT**

The Map Index task pane Elements list displays all the topics on your map that are formatted by topic styles.

Display the Topic Styles pane

- On the **Format** tab, in the **Object Format** group, click **Topic Style**, then click **Organize Topic Styles**.
- On the **Status Bar**, click **Task Panes**, then click **Topic Styles**.
- For a flowchart: right-click the topic, select **Topic Styles**, then click **Organize Topic Styles**

Create topic styles

You can create a Topic Style from a topic that you've already formatted.

1. Format a topic with the attributes you want to use. (These include the topic font, shape and color, alignment, size and margins, and subtopics layout.)
2. Select the formatted topic.
3. Do **one** of the following

- **On the Display tab, in the Object Format group, click the Topic Style arrow, and then click New Style From Selected Topic.**

  **Or**

  - **For a flowchart topic:** right-click the topic select **Topic Styles,** then click **New Style From Selected Topic.**

**Read Hint**

If the **Topic Styles** pane is already open, at the top of the pane, click **New style from selected topic.**

The new style will appear in the **Topic Styles** pane with a unique, generic name. You can rename, modify, or remove the style after it has been created.

**Use topic styles**

You can apply topic styles using commands on the **Format** tab, in the **Object Format** group, or from the **Topic Styles** pane.

**Read Note**

To open the **Topic Styles** pane, on the **Format** tab, click the **Topic Style** pull-down, and then click **Organize Styles.**

**Apply a topic style**

1. Select one or more topics.
2. Open the **Topic Styles** pane.
3. Click the style you want to use for the selected topics.

When you apply a topic style, any formatting you have already applied is not changed. If you want to topic to reflect only the formatting of the topic style you should first remove the topic’s formatting.

**Read Note**

You cannot apply a topic style to override the font and fill colors for topics created or modified in **Review Mode.**

**Remove a topic style from a topic**

1. Select one or more topics.
2. Do **one** of the following:

   - **In the Topic Styles pane,** under **Selected Topic,** click **Clear topic style.**
   - **Or**
     - **On the Format tab,** in the **Object Format** group, click the **Topic Style** arrow, then click **Clear Topic Style.**
   - **Or**
     - **For a flowchart topic:** right-click the topic select **Topic Styles,** then click **Clear Topic Styles.**

The topic will display the default Map Theme’s formatting.
If you no longer wish to use a topic style on the map you can delete it.

Select all topics that use the same topic style

1. In the Topic Styles pane click the style's arrow.
2. Click Select all topics that use this style.

You can use topic styles as a criteria to choose which topics to display. For more information, see Add a SmartRule.

Modify and manage topic styles

You can manage topic styles from the Topic Styles pane.

Modify a topic style

1. Select a topic that uses the style you want to modify, and format it with the attributes you want to use.
2. Do one of the following:
   - In the Topic Styles pane, click the arrow for the style you want to change.
   - On the ribbon's Format tab, click the Topic Style arrow.
   - For a flowchart topic: right-click the topic select Topic Styles.
3. Click Update Style to Match Selected topic.

The style will reflect the new formatting attributes, as will topics that use this style.

Delete a topic style

1. In the Topic Styles pane, click the arrow for the style you want to delete.
2. Click Delete.

The topic style will be removed from the Topic Styles pane, and topics that use this style will return to automatic formatting.

Rename a topic style

1. In the Topic Styles pane, click the arrow for the style you want to rename.
2. Click Rename.
3. Enter the new name for the style and click OK.

Reuse topic styles on another map

If you want to reuse the topic styles of the current map on other maps, you can create a Map Theme that includes the topic styles along with the default format settings for map objects.
When you create a new map using this theme, or apply the theme to an existing map, the topic styles will appear in the **Topic Styles** pane.

If you create a Map Template from the current map, the topic styles are saved as part of the template, and will be available when you create a new map using that template.
Apply and modify map themes

A map’s overall appearance or default “look” is determined by its underlying Map Theme.

A map theme is a collection of the default format settings used for the various types of elements your map. When you add a new map object, its appearance is determined by the map’s theme. The Map Theme contains settings for:

- Central topic, main topics and subtopics (by level)
- Org-chart topics and their subtopics
- Callout topics and their subtopics
- Floating topics and their subtopics
- Floating Org-chart topics and their subtopics
- Flowchart topics (via the settings for floating topics), callouts, and relationships
- Boundaries
- Relationships
- Map background
- Notes (the default font)

The Map Theme may also include a set of topic styles.

If you want to change the default format settings for the current map you can modify the theme, or you can apply a different Map Theme. Each new map you create uses the theme of the blank map or the template you use to create it.

Once you’ve chosen the map’s theme you can then go on to change individual topics by applying topic styles or formatting. This individual formatting overrides the theme’s automatic format settings and persists if you modify the current theme or assign a new theme to the map. (Note that you can remove the map’s formatting first if you want to return all topics to their automatic formatting.)

You can use the Easy Editor or Advanced Editor in Map Theme view to modify the default theme settings for a map, Map Template, or Map Theme. This view shows an overview of all the current theme settings and lets you change them interactively.

In the Advanced Editor you’ll see a generic map that displays all the map objects formatted in accordance with the current theme settings.
This view allows you to select an object and set the automatic formatting options for it, as well as setting the format for the map background and the automatic notes font.

**Apply a Map Theme**

You can apply a different Map Theme to your map at any time. If you have already applied formatting to individual topics, these topics will not be changed by applying a new Map Theme unless you first remove the formatting you've applied. (see below)

1. On the **Design** tab, click a theme in the **Theme** gallery. Click a theme name to see a generic preview of it.

   **READ HINT**

   In **Linked Maps View**, you can quickly apply a new theme to one or more linked maps. Select the maps, then, in the **Assign** group, click **Map Themes**. Select the style in the organizer and click **Apply**.

**Clear the map formatting**

When you apply a new Map Theme, the theme’s settings will not override any formatting that you have already applied. If you have already been working on the map for a while and decide to use a different theme, you may wish to clear the formatting that you've applied before applying the new theme.

1. Select the topics, boundaries or relationships whose formatting you want to clear (press CTRL+A to select all objects).

2. On the **Home** tab or on the **Format** tab, in the **Font** group, click **Clear**. Press CTRL+SPACE.

**Use the default Map Theme**

A default Map Theme, Default.mmas, is provided with MindManager. You can reset the map to use this default theme, modify it like any other theme, or use the theme of the current map as the default from now on.

**Reset the current map to the default Map Theme**

- On the **Design** tab, click the **Themes** arrow, and then click **Reset Current Map Theme to Default**.

**Replace the default Map Theme with the style of the current map**

- On the **Design** tab, click the **Themes** arrow, and then click **Make Current Map Theme the Default**.
A "backup" copy of this theme, Default (original).mmas, is included with MindManager

Modify map themes

Modify the theme of a Map Template

1. Click the File tab, click Open, and then in the file type drop-down list, select MindManager Template.
2. Navigate to the template file and click Open.
3. On the Design tab, click Edit Theme.
   Use either the Easy Editor or Advanced Editor in Map Theme view to set the new automatic formatting options.

Modify an existing Map Theme

1. Click the File tab, click Open, and then in the file type drop-down list, select MindManager Theme.
2. Navigate to the theme file and click Open.
   The Theme opens in the Map Theme view. Use either the Easy Editor or Advanced Editor in Map Theme view to set the new automatic formatting options

Save new theme settings on-the-fly

Use the Map Theme command in any of the format dialogs to save the formatting of the selected topic, boundary, or relationship as the new style default.

- In any format dialog, click Map Theme, and then click Save as Default Theme for This Map.

What gets saved? ▼

<table>
<thead>
<tr>
<th>To save</th>
<th>Click</th>
<th>Dialog (click Map Theme, Save as New Theme Default)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topic formatting</td>
<td>Format tab, Object Format dialog launcher</td>
<td>Format Topic</td>
</tr>
<tr>
<td>Font formatting</td>
<td>Format tab, Font dialog launcher</td>
<td>Format Font</td>
</tr>
<tr>
<td>Boundary formatting</td>
<td>Insert tab, Boundary, Format Boundary</td>
<td>Format Boundary</td>
</tr>
<tr>
<td>Relationship formatting</td>
<td>Insert tab, Relationship, Format Relationship</td>
<td>Format Relationship</td>
</tr>
</tbody>
</table>
When you save the topic formatting as a new theme default, all the topic formatting settings are saved, not just the settings in the current dialog.

Any topics or objects using the default theme formatting (without additional formatting applied) and any topics or objects you add will display using the theme's default formatting.

---

**Open Map Theme Easy Editor**

1. Open the map.
2. On the Design tab, click **Edit Theme** to open Map Theme view.
3. In the Editor Type area, click **Easy Editor**.
   
   The Advanced Editor pane opens on the left side of the workspace.

   When you've finished editing, you can update your current map's theme by clicking **Apply and Close**, or save the theme for reuse by clicking **Save to Gallery**.

---

**Modify text and fonts in the current map's theme**

Do any of the following:

- Choose a font for the central topic from the **Heading Font** drop-down list.
- Choose a font for the map with the exception of the central topic from the **Body Font** drop-down list.
- Choose how font size decreases between topic levels in the map from the **Cascading Text Sizes** drop-down list.
- Choose a text color from the **Text Color** drop-down list.

---

**Modify topic shapes in the current map's theme**

Do any of the following:

- Choose a shape for the central topic from the **Central Topic** drop-down list.
- Choose a color for the central topic from the **Central Topic Color** drop-down list.
- Choose a shape for floating, main, and callout topics from the **Floating, Main & Callout Topics** drop-down list.
- Choose a color for floating and main topics from the **Floating & Main Topics** drop-down list.
- Choose a shape for the subtopics from the **Subtopics** drop-down list.
- Choose a color for the subtopics from the **Subtopic Color** drop-down list.
- Choose an outline color for topics from the **Outline Colors** drop-down list.
- Choose a topic size from the **Topic Size** drop-down list.
- Choose an option to set the space between topics from the **Map Density** drop-down list.
Modify topic lines in the current map’s theme
Do any of the following:

- Choose a connector line style from the **Topic Connector Style** drop-down list.
- Choose a connector line thickness option from the **Line Thickness** drop-down list.
- Choose a connector line pattern option from the **Line Pattern** drop-down list.

Modify the background in the current map’s theme
Do any of the following:

- Choose a background color from the **Color** drop-down list.
- Choose an image for the background by clicking **Select Image**. You can adjust the background image transparency and set tiling options.

---

Open Map Theme Advanced Editor

1. Open the map.
2. On the **Design** tab, click **Edit Theme** to open Map Theme view.
3. In the Editor Type area, click **Advanced Editor**.
   
   The Advanced Editor pane opens on the left side of the workspace.
   
   When you’ve finished editing, you can update your current map’s theme by clicking **Apply and Close**, or save the theme for reuse by clicking **Save to Gallery**.

Modify an object’s theme
If you see the object whose theme you want to change, double-click on the sample object, choose the formatting options from the Style Topic Layout dialog, and click **Apply**. You can set the automatic formatting for:

- topic font and text including the automatic text for new topics, such as subtopics, in the **Font** group.
- topic format, such as a shape’s fill and color or a connector line’s pattern and color, in the **Object Format** group.

If you need help identifying an object, use the list in the upper left to locate it on the **Select style group to modify** pane.

You can also modify formatting for boundaries and relationships in a theme. In the **Select style group to modify** pane, choose **Boundaries** or **Relationships**, and modify any of their properties.
Set the number of subtopic levels in a theme

- Adjust the slider in the **Define number of style levels** pane.

Select a specific subtopic level to format

- Click the sample topic at that level or choose an option from the **Select style group level** pane.

Return an object to the system default formatting settings

- Click **Reset Object Theme**. Then you can start over and apply new settings.

Modify the theme of the background

1. In the More Options group, click **Edit Background**.
2. In the Background dialog, do any of the following:
   - Choose a background color from the **Select color** drop-down list.
   - Choose an image for the background by clicking **Select Image**. You can adjust the background image transparency and set tiling options.
3. Click **Apply**.

Modify the automatic font settings for topic notes

1. In the More Options group, click **Notes Theme**.
2. In the Format Notes dialog, choose a font, font size, and color.
3. Click **Apply**.

Add a description or comment to a Map Theme

1. Click the **File** tab.
2. Click **Info**.
3. Click **Properties**.
4. In the Properties dialog, enter a theme description, such as its intended use or the project it was designed for, in the **Comments** field.

Create a theme from the current map's default format settings

You can save the current map's theme to the folder used by the organizer, or to a different location.
1. Adjust the map's default formatting settings to your liking.

2. On the File tab, click Save As, click Save As again, click Save As Type, and then click MindManager Map Theme.

3. Save the file.

---

READ NOTE

You can also create Map Themes and manage them from the Organizer.

The Theme you save will not appear in the Organizer unless you save it in the default location.
Presentations

Use Walk Through View

The Walk Through view is an alternative view that allows you to browse with a minimum of distraction. It switches from normal Map View to a full screen mode for maximum map space and hides all menus and toolbars. It also has options for automatically collapsing topics to make your presentation run more smoothly. The presentation toolbar at the bottom of the screen lets you navigate through and between maps. You can also use the shortcut keys in this mode to view, navigate, edit and even create new maps on the fly.

Start Walk Through view

- On the View tab, in the Presentation pull down, click Walk Through.

The buttons across the bottom of the Walk Through screen control the view:

- **Start** resets the map to presentation-ready state: Collapses all main topics, centers the map, and switches focus to the central topic

- Previous (or press SHIFT+TAB) moves backward (inward, then counter-clockwise) to the next collapsed topic and expands it.

- **Next** (or press TAB) moves forward (outward, then clockwise) to the next collapsed topic and expands it. Topics are expanded as you specify in the Options (below).
**Zoom in, out** (or press CTRL+‘=’ and CTRL+‘-’)

**Open Map** shows a menu with a list of all open maps. Use this list to switch between open maps or open a different map.

**Options:**

- **Expand** options control whether selected main topics are expanded one or two levels.
- **Visit All Topics** causes the **Next** button to visit each topic (normally the last level of topics is skipped). Topics are expanded one level at a time.
- **Auto-Collapse Topics** automatically collapses topics when a new topic is selected. This option can make your presentation run much more smoothly with fewer mouse clicks.
- **ribbon** displays the ribbon. This can be convenient for temporary access to commands.
- **Transparent Fade Out** fades topics that are not the current focus.
- **Highlight Topic, Highlight Topic Frames** highlights either the topic text or the topic frame when you rest your pointer over a topic.

**READ NOTE**

If you are zoomed out to 50% or less, the blue topic frame and the Quick Add tabs will not be displayed.

- **Show / Hide** - hides classes of map elements that may prove distracting without having to edit the map to remove them (similar to using the **Show / Hide** command). Check only the map elements that you want to display during your presentation.

**End Walk Through** closes the presentation and returns to the regular Map View (or press ESC).

**Editing during your presentation**

You can still edit the map in Walk Through view - use the MindManager shortcut keys to add topics. For temporary access to commands you can switch on the ribbon by clicking the **Options** button.

**Switching to other maps or applications during a presentation**

In Walk Through view the MindManager window is automatically maximized and hides the Windows task bar.

Its a good idea to open all the maps you need in your presentation before you start. Switching between maps is smoother (requires fewer steps) than opening them.

Likewise, you should open any related applications you may want to switch to during your presentation before you start. Switching to a different application is smoother than opening one. The exception are applications that can be launched by links on your map. These open automatically as soon as you click the link icon.
Since the Windows task bar is usually hidden in this mode, you must use ALT+TAB to switch to a different active application (Hold down the ALT key and continue to press TAB to cycle through all open applications.) When you return to MindManager it will still be in Walk Through view.

✔️ READ HINT

Use the Timer feature to keep track of the length of your presentation.
Use Slides View

In Slides view, you can create and manage a set of slides for a map. Each slide can show a branch or sub-branch of the map, expanded or collapsed as you desire. This can help focus attention on a specific part of the map for presentation or printing.

When you start Slides View, the Slide pane appears at the left of your screen. This where you create and manage your slides. Branches with associated slides are marked with a special icon.

Once you have created slides, you can print them, display them in a slide show, or export them to Microsoft PowerPoint.

The Map Index task pane Elements list displays all the topics on your map that contain slides.

Start Slides View

- On the View tab, in the Presentation pull down, click Slides.

The Slides pane will appear at the left of the screen.

If your map already contains slides, right-click a slide icon on the map, and then click Show Slides.

You can display the filter indicator at lower-left to show if a filter is active, or if some map elements are hidden using the View option Show filter overlay in slides.

Create a slide

Do one of the following:
• Right-click a topic on the map, and then click **New Slide from Topic**.
• On the **View** tab, in the **Presentation** pull down, click **New Slide from Topic**.

The new slide thumbnail will appear in the Slides pane. Each slide you create is the same size, but you can **adjust** the size and position of its content.

On the map, the topic is marked with a special icon [icon] that indicates that this topic has a slide associated with it. If the topic has more than one associated slide, it is marked with a multiple slide icon [icon].

A topic can appear on multiple slides, either alone, or on a sub-branch on another slide.

**View, edit and adjust slides**

When you click a slide thumbnail in the Slides pane it is displayed in the main window. The title bar at the top of the main window displays the name of the slide you reviewing, the Pin button to unpin the boundary and adjust the size and position of the slide content, and a button to return to viewing the whole map.

To return to the full map view, click **Show Map** at the top of the main window when viewing a slide.

**Edit slide content**

You can change how branches are displayed (expanded or collapsed) on the slide, and edit topics using the normal editing commands.

**Change the size and position of slide content**

When you are viewing a slide, the gray box indicates its boundary. The boundary is like a window through which you view the map content. Slide boundaries are fixed or "pinned" as indicated by the Pin button [icon] on the Slides view title bar. In "pinned" mode, the zoom and pan controls adjust your view of the slide. When boundaries are unpinned, you can zoom and pan to adjust the position and size of the content on each slide.

[icon] Read Hint

To see the page boundary for each slide in the thumbnails, click the **Presentation** pull-down, and then click **Show Page Boundary in Thumbnails**.

It's easiest to adjust slide content when you can see the entire slide. Before you begin, pan and zoom the view to see all 4 boundaries of the slides you want to modify: While still in "pinned" mode [icon], use the zoom control on the bottom toolbar, the zoom commands on the ribbon's View tab, or use zoom keyboard shortcuts (CTRL + =, CTRL + -), and use the scrollbars to pan the slide.

To unpin all slide boundaries, do **one** of the following:

| On the Slides view top toolbar, click the Pin button [icon] | Or | Click the **Presentation** pull-down, and then click **Unpin Page Boundaries**. |
The Pin button changes to 

 to indicate that the boundaries are now unpinned, and each boundary is highlighted in yellow in the main window.

In "unpinned" mode 

, you can drag the boundary to change its position, or drag its corners to resize it:

- You can drag the slide boundary to change its location relative to the map content.
- Drag the corners of the slide boundary to change its size relative to the map content. the aspect ratio of the slide always remains constant.

To reset the boundaries for all slides to their original location and size, click the Presentation pull-down, or click the Slides pull-down at the top of the Slides pane, and then click Reset Page Boundaries.

### Refresh slide thumbnails

To ensure that your slides reflect the current state of the map, you can refresh them.

1. Do one of the following:
   - Click the Slides pull-down arrow at the top of the Slides pane.
   - Or On the View tab, click the Presentation pull-down arrow.

2. In the pull-down menu, click Refresh Slide Thumbnails.

### Print slides

1. Do one of the following:
   - Click the Slides pull-down arrow at the top of the Slides pane.
   - Or On the View tab, click the Presentation pull-down arrow.

2. Click Print Slides. You can choose to print all the slides or individual slides here.

3. Configure the Page Setup Options and use Print Preview to check the output.

To print all the slides immediately, click Quick Print on the Quick Access toolbar.

If you prefer not to include the slide icons on your printout, you can use the Show / Hide command.

### Display a slide show

1. Do one of the following:
   - Click the Slides pull-down arrow at the top of the Slides pane.
   - Or On the View tab, click the Presentation pull-down arrow.

2. Click Slide Show.
Work with Maps

- Use the controls at the bottom of the screen to step through your slides and zoom in or out.
- Click the Close button (at bottom-right) to exit the slide show.

**READ HINTS**

Your slides are dynamic in slide show mode: you can pan the slide by dragging on the background, or expand / collapse / edit topics, but changes to topics will not be reflected on all the slides until you refresh them.

The underlying map is changed when you edit topic text, add or remove topics, or change topic formatting, and these changes are also shown on slides that contain the edited topics.

You can hide the slide icons and other map elements when you play a slide show by using the Show / Hide command.

Manage slides

- Click and drag to re-order your slides.
- Click a slide in the Slides pane and use the pull-down to Rename or Delete the slide.
- Deleting a slide does not remove the topics from the map.
- To remove all slides from the map, click the Presentation pull-down and then click Delete All Slides.
Use the timer

The Timer feature lets you set a countdown timer for the length of your presentation, brainstorming session, or meeting. The clock lets you see the amount of time left in a subtle way without asking anyone else in the group for reminders or distracting from the presentation, and gives a visual cue when the time is up. You can move the timer display to a convenient location on the screen.

Start the timer

1. On the View tab, in the Presentation pull down, click Timer.
2. The Timer appears on the bottom status bar.
3. To set the countdown time, click the menu arrow, and select a time, or use the arrows to increase or decrease the time. Click the timer to start it.

   ✔️ Read Hint

   If you want to use the timer in Walk Through view, and you will not be displaying the ribbon during your presentation, start it before switching to Walk Through view if (the timer can only be enabled from the ribbon).

Pause the timer

- While the timer is running, click on it to pause. Click it again when you want to resume.

Timer options

To set the timer options, click the Timer menu arrow, and then click Options.

Audio Alarm - Select this option to get an audio alarm when the timer is up.
Show Seconds - Turn off this option if you do not wish to see the seconds passing.
Hide above 5:00 - This option will hide the timer until five minutes remain. You can re-display the timer at any time by clicking the Timer button on the ribbon.
Don't go below 0:00 - If this option is checked, the timer flashes when it reaches 0:00. If unchecked, the timer flashes when time is up but continues the countdown with negative numbers to indicate the elapsed time past 0.
Reset - Stops the timer and resets it to 00:00:00. Use the incremental scroll buttons on the timer or use the Timer menu to set a new time.
Collaborate using Content Control

When you activate Content Control within a map that you’ve created, you can control what other users can modify in the map. If you share the map password with others, they have full editing capabilities. People who don’t have the password will only be able to update the map elements that you’ve specified.

When a map that has been set to Content Control is opened in MindManager 2020 for Windows, an overlay appears in the top-left corner of the map window. If you know the map password, you can enable full editing. You can also view the Content Control settings that were specified by the map creator.

---

**READ NOTES**

MindManager Content Control requires a MindManager Enterprise License Key. After Content Control has been activated, you can allow contribution from others on a map by map basis.

Content Control is not supported in MindManager 2019 for Windows and earlier or any macOS version of MindManager. However, when you open a map set to Content Control in MindManager for Windows (version 2019 or earlier), you will be prompted to enter the map password. If you enter the map password, you can open with full editing capabilities. If you don’t have the password, you can click Read Only to view the map. If you open a map set to Content Control in any macOS version of MindManager, you can view the diagram as a read-only file.

---

**Activate Content Control**

1. Click the **File** tab, and then click one of the following:
   - **Info**
   - **Share**
2. Click **Content Control Settings**.
3. In the Content Control Settings dialog, enable the **Enable Content Control** check box.
4. Type a password in the Set Password box, and retype it in the Confirm Password box.
5. Enable any of following check boxes corresponding to the map elements or markers that you want to allow contributors to edit:
   - Add Comments
   - Edit Icons
   - Edit Tags
   - Edit Progress
   - Edit Priority
   - Edit Start and Due Dates
   - Edit Resources
   - Edit Properties
   - Add Links and Attachments
   - Add and Edit Notes
6. Click Save.

Enable full editing for a map set to Content Control
1. Click the Content Control overlay, and choose Enable Full Editing.
2. Enter the map password.
   You can revert the editing privileges by clicking the Content Control overlay, and choosing Disable Full Editing.

Edit map elements or markers in maps set to Content Control
When working with a map set to Content Control - Limited Editing, you can make the following modifications if permitted by the map author:
   - Add comments
   - Edit icons
   - Edit tags
   - Edit progress
   - Edit priority
   - Edit start and due dates
   - Edit resources
   - Edit properties
   - Add links and attachments
   - Add and edit notes
To view what map elements the map’s author has allowed to editing, click the Content Control overlay, and choose Content Control Settings.
**Disable Content Control**

1. Click the Content Control overlay, and choose **Content Control Settings**.
2. Enter the map password.
3. In the Contributor Settings dialog, disable the **Enable Content Control** check box.

---

**Co-Editing**

Co-Editing is a secure cloud-based service that eliminates version conflicts and allows multiple users to work on the same file at the same time.

> **READ NOTE**

All co-editors must use MindManager 2020 to reopen and edit maps from a Co-Editing session.

Co-Editing takes place in your browser, giving you the flexibility to collaborate with people who don't have MindManager installed. Co-Editing requires files to be stored in OneDrive, Google Drive, SharePoint, Box, or Dropbox.

**Start a Co-Editing session**

1. Save the map to cloud storage service. For more information, see Share a map via a cloud storage service.
2. On the **Home** tab, click the **Co-Edit** drop-down, click **Start Co-Editing Session**.

> **READ NOTES**

If you are working in SharePoint and start a Co-Editing session with a file that is checked out, a dialog will appear. Click Yes to check the map back into SharePoint so that co-editors with Edit permission can also save changes to the map. Otherwise, only the user who checked out the file can save changes during a Co-Editing session.

The first time that you start a Co-Editing session using a cloud storage service, you must sign in to authorize MindManager to access the file. You will not need to do this for subsequent maps saved to this cloud storage service.

3. On the **Invite Others To Co-Edit This File** page, enable the **Anyone with link can co-edit** check box.

> **READ NOTES**
You can choose the other options to have Co-Editing sessions where some people can edit the file, while others can only view it. You can also let the file-privilege settings in the cloud storage service determine what invitees can do.

Anyone taking part in a Co-Editing session must be signed into their MindManager Cloud account. If they don’t have one, they can create one.

4. Click Copy Link, and share the link with your co-editors.

5. Click Done.

The map opens in an online Co-Editing window, and editing in MindManager is paused. For more information, see Edit a map in a Co-Editing session.

If you open a file in MindManager that is being edited by someone else, you are notified and the file opens as a read-only file. You can request a Co-Editing session with the person editing the map.

Resume working on a map from Co-Editing session

After a Co-Editing session, you can keep on working on the map in MindManager.

1. If the map used in the Co-Editing session is still open in the MindManager desktop application, a red overlay is displayed in the top-left corner of the map window to indicate there is a newer version.

2. Click the overlay, and click Load Latest Version.

Edit a map in a Co-Editing session

During a Co-Editing session, multiple users can work on the same file at the same time. Teams can work remotely in real time, seeing changes to the map as they are made. Each participant has a unique mouse cursor.

For information about starting a Co-Editing session and resuming editing in MindManager on your desktop, see Co-Editing.
Overview of the Co-Editing window

The Presentation View map reader window offers the following navigation and viewing controls:

**Menu** opens a sliding pane on the left that gives access to settings for switching viewing modes, printing, getting help, and more viewing options.

**Search** allows you to search for text in the map.

**File** offers options for saving maps during a Co-Editing session.

**View** contains commands for changing magnification levels (**Zoom In** or **Zoom Out**), collapsing (**Collapse All**) and expanding (**Expand All**) topics; centering map on topic, expanding selected branch, and collapsing all other branches (**Focus**); adjusting the size of the map in its current display to the dimensions of the window (**Fit**).

**Share** lets you invite more people to the Co-Editing session and choose export options.

**Tool Panel**

Contains tools for adding boundaries, relationships and callouts; inserting and editing topics; copying, cutting, pasting, deleting map elements; as well as inviting more people to the Co-Editing session.
Filter pane, Participants pane or Content Editing pane

Allows you to filter a map by icons and tags, view who is participating in the Co-Editing session, or view and edit the contents of the selected topic.

Zoom slider

Magnifies or reduces the size of the map in the window.

---

Co-Edit a map

When you select an element in a map, buttons corresponding to what is editable are highlighted on the right side of the window:

- Task Information
- Icons
- Comments
- Tags
- Properties
- Notes

You can also modify a map in a Co-Editing session using the Tool Panel, which contains tools for adding boundaries, relationships and callouts; inserting topics, subtopics and floating topics; editing topic shape and fill color; copying, cutting, pasting, deleting map elements; as well as inviting more people to the Co-Editing session.

Co-Editing sessions automatically end after a period of inactivity. Before a session is ended due to inactivity, a warning appears that allows you to keep the session active.

To add more people to the Co-Editing session, click Share > Invite Others to Edit to copy a session URL that can be shared.

See who is participating in a Co-Editing session

- Click Participants on the right side of the window.
  The Participants pane opens and displays a list of co-editors.

Hide your co-editors cursors

1. Click Participants on the right side of the window.
   The Participants pane opens.
2. Set the Show Cursors control to Off.
Filter maps in a Co-Editing session
When a filter is used during a Co-Editing session, only the co-editor who applied it sees the filtered version of the file.

1. Click Filter on the right side of the window.
   Any type of icon in the map is displayed in the Filter pane.
2. Enable any of the corresponding check boxes.
3. In the Match area, enable either Any or All.
4. Click one of the following filtering options:
   - Show
   - Fade
   - Hide

Save changes during a Co-Editing session
- Click the File menu, and choose one of the following:
  - Save to save the file changes during a Co-Editing session
  - Save As to save the file with a new name.
  - Save To > [name of cloud storage service].

Close a Co-Editing session
Note: Before closing a Co-Editing session, you must save the file, otherwise any changes made since the last time that you saved are lost.

- Close the browser tab for the Co-Editing session.

  When the Co-Editing host leaves a session, the session will end unless there is another eligible host to continue the session. Eligible hosts must have edit permission for the file and an active Co-Editing subscription.
  To continue editing the map on your desktop in MindManager, see Resume working on a map from Co-Editing session.

Proof, Review, and Save

Proof and prepare a map

To finalize a map, you may want to add comments about why the map was created and what it is used for in the Map Properties dialog, check for spelling errors using the Spell Check feature, and check the links to other files with the Repair Links command.

If you need to find and change specific topic text, use the Find and Replace command.

What do you want to do?

Set the map properties
Spell check a map
Repair the map’s links
Add comments to the map

See also:
Find and replace topic text
Select topics and objects
Filter topics
Review a map

Set the map properties

Every map contains a set of Properties that provides information about the map. You can update the Map Properties at any time while you work on the map. In addition, you can configure MindManager so that the first time you save a map or a Map Template you are automatically shown the Properties Summary dialog: Use the MindManager Save option: Prompt for map properties on first save.

Change map properties

1. Do one of the following:
   - Right-click on the map’s workbook tab and select Properties.
   - Or On the File tab, click Info, and then click Properties.

2. Modify the properties as needed.
3. Click Save to use the new properties. These new properties will be saved with the map the next time you save it.
   - Click Cancel to return the properties to their previous values.

Options for the Summary Pane.
Options for the General pane.
Options for the Statistics pane.
You can also enter properties when you modify Map Templates and Themes.

Spell check a map

The spell check feature in MindManager is like most standard spell checkers so it should be familiar.
You run the spell check to check through all the topic text and notes text on the map. You can also use
the auto-spelling feature to check spelling as you type text and the Auto-correct feature to automatically replace typically misspelled words with their corrected versions.

Start Spell Check

The spell check checks all topics in the map (regular topics, callouts, and floating topics) and their attached notes, even if they are collapsed. Collapsed topics are expanded only when misspelled or repeated words are found.

If the spell check finds a misspelling▼

The Spelling dialog opens and the word appears in the Not in dictionary field.

If the word is misspelled you can:

- Choose to replace it with any of the Suggestions shown (click the suggested word)
- Type the corrected word in the Change to box.

Then click:

- Change to change it
- Change All to correct all the occurrences of the word on the entire map.
- AutoCorrect to change the word and add the misspelled word and its corrected version to the AutoCorrect list.

Or, you can correct the word directly by editing the topic text. Then, click Resume in the Spelling dialog to resume the spell check.

If the "Not in dictionary" word is correct, you can:

- Add it to the dictionary. Select the dictionary file under Add words to then click Add to Dictionary.

If you add words to the CUSTOM.DIC dictionary (a Microsoft Office file) any words added to it in MindManager will also be used by your Office applications.

- Click Ignore once to leave the word unchanged and continue, or Ignore All to leave all occurrences of the word unchanged for this spell check session. (If you want to ignore the word permanently you must add it to the dictionary).

If the spell check finds a doubled word▼

The Spelling dialog opens and the word appears in the Repeated word field.

- Select Ignore once to ignore this instance
- Select Delete to remove the repeated word.

You'll see a message when the spell check is finished checking the map.
To stop the spell check at any time, click the **Close** button in the **Spelling** dialog.

**Check spelling as you type**

When the Auto-spelling feature is enabled, the text you enter is checked as you type. Misspellings and doubled words are noted by a red underline. You can right-click on the word to correct it. A context menu appears with a list of suggestions at the top.

- Enable or disable this feature for *all maps* using the MindManager Spelling option **Correct spelling as you type**.
- To disable this feature for the current map *only*, click **Spelling** and then clear the **Check spelling as you type in this document** option in the **Spelling** dialog.

**Correct a misspelling ▼**

1. Right-click on the misspelled word.
2. In the context menu that appears, do any of the following:
   - Select from the list of suggested words at the top of the menu to replace the misspelled word.
   - Select **Ignore once** or **Skip once** to ignore this instance of the word.
   - Select **Ignore all** to ignore this word on the entire map.
   - Click **Add to Dictionary** to add the word to the default dictionary (to add to a different dictionary, click **Spelling** to open the Spelling dialog with more options). It will not be counted as a misspelling on any maps you subsequently open.
   - Click **Spelling** to enter your own correction.
   - Click **AutoCorrect** and select one of the suggested words. The misspelled word and its corrected version are added to the AutoCorrect list. (Click **AutoCorrect options** if you want to add this or other entries manually.)

**Correct a doubled word ▼**

1. Right-click on the doubled word.
2. In the context menu that appears, do any of the following:
   - Select **Delete repeated word** to remove the duplicate word.
   - Select **Ignore** to leave both words in place.
   - Click **Spelling** to see the Spelling dialog with more options.

**Customize AutoCorrect list entries**

You have the option of adding entries to the AutoCorrect list while you are doing a spell check, based on the misspellings and replacements you choose, or you can update this list manually at any time.

1. On the **Review** tab, in the **Proofing** group, click **AutoCorrect Options**.
2. Modify the list as you like:
   - To add a new entry, enter a misspelled word and its correct version and click **Add**.
MindManager User Guide

- To modify an entry select it, modify it, and then click **Replace**.
- To remove an entry, select it from the list, and then click **Delete**.

Options for using AutoCorrect.

**Languages and Dictionaries ▼**

The spelling dictionary language is determined by the document language. To change the language for the current map, on the **Review** tab, in the **Proofing** group, click **Set Language**.

**☑️ READ HINT**

Click the **Default** button to make this the default language used for all new documents. You can also change the default language for new maps (but not the current map) in the MindManager Spelling options dialog.

**Custom Dictionaries**

MindManager comes with its own dictionaries for all supported languages. To expand the list of known words you have the option to add custom dictionaries to the spelling process.

MindManager uses the standard MS Office CUSTOM.DIC dictionary, and you can set options to use additional custom dictionaries in the Spelling Options dialog. A custom dictionary is a simple text file (file extension is ".DIC") that contains a list of correct words (each word in one single text line) with a blank line at the end. The spelling engine recognizes those words as correctly spelled.

The spell checker uses all custom dictionaries at the same time, when checking for misspelled words. When the user adds new misspelled words to the custom dictionary, they are added only to the dictionary selected in the Spelling dialog **Add words to** field.

**Repair the map's links**

If you move, rename, or delete a document that is a link destination, all links to it will be "broken." You can check the map for broken links to files and folders.

1. On the **Insert** tab, in the **Topic Elements** group, click the **Link** arrow, and then click **Check File & Folder Links**.
2. If a broken link is found, you can choose to browse for the file to repair the link or remove the link from the map.

**⚠️ READ NOTE**

This command does not check links to web sites or other web locations or Mindjet Files online.

**☑️ READ HINT**

If you click a broken link you'll see a message that offers you the opportunity to repair it immediately.
Add comments to the map

You can add short remarks to your map in the form of comments. These can be used like "sticky notes" as short temporary notes or reminders. For larger, more detailed amounts of text, you can use a topic note.
Comments are primarily used during the Review process, but you can add them casually, without conducting a formal review.
Successive comments are added to topics as a list. Each includes the author's User Name (as defined in the MindManager User Information options) and the date and time they were added so you can track their origin.

Add Comment to a topic

1. Select the topic.
2. On the Review tab, in the Comments group, click New Comment.
   ✔️ READ HINT
   If you have not entered your name and email address you will be prompted for this information now. This information is used solely to identify your comments on the map. This is helpful on maps that have comments collected from several users.
3. In the Topic Comments window, enter your comment text.
You can see the comments for a topic when you rest your pointer over the Comments icon 📝. The list of comments will pop up.

Modify the comments list for a topic

After you add a comment, the Comments window remains open. If you close it you can click a topic's comments icon to re-open it.
Use the buttons at the top of the window or the commands in the Review tab, Comments group to:

- Add a new comment to the list
- Remove the selected comment from the list
- Jump to next comment
- Jump to previous comment

Remove comments list

- For a single topic, right-click the topic's comment icon, and then click Remove Comments.
• For multiple topics, select the topics. Then, on the Home tab, click the Delete button, and then select Comments.

**READ HINTS**

You can suppress the display of comment icons on topics in Map view (for example if you want to print the map without them) using the Show / Hide command.

You can use the Power Filter command to see only topics with or without comments, or use the Power Select command to select all topics with comments.
Review a map

The Review command enables you to collaborate on maps with colleagues. The process works in this way: the primary contributor creates a map and then passes the map to the next contributor who adds topics and comments, then passes it to the next contributor. The process continues thus, and when all contributors have finished, the map goes back to the primary contributor who assesses the collective review topics and comments and modifies the map accordingly. Topics added during the review appear as visually distinctive using text and fill colors automatically assigned to each reviewer. You can adjust the review settings to choose specific colors for review topics and notes that you add and if you desire, mark your topics with an icon or a prefix. You can enable a setting to automatically track changes to the map with comments when topics are modified or removed. When the primary contributor receives the map after review, the review topics stand out from the original map content. He/she can then decide whether to accept or delete the review topics.

You can also just add comments casually.

Begin your review session

- On the Review tab, in the Tracking group, click Start Review.

You will be prompted for your name and email address when you begin the review session if you have not already entered your user information in the MindManager options User Information fields. This information is used to identify your comments and allows the next reviewer to reply to you if needed. The Review Mode Action Bar appears at the top of the map window to indicate that you are in Review Mode.

View review topics and comments

You'll probably want to start your review by seeing what topics and comments have already been added to the map. You'll be able to see Review topics (added during a review session) easily - they are colored and may contain a prefix or special icon marking them. You can see the comments by hovering over the comments icon 📝. Some comments are added automatically during the review process and some may be actual input from the group.
You can use the **Power Filter** command to show only the topics with comments and/or only the Review topics (useful for large maps). When you are done inspecting the comments and Review topics remove the filter so you can see the whole map again.

**Step through comments**
- Click on any Comments icon to open the Comments window.
- In the **Comments** window, or in the **Review** tab **Comments** group, click the **Next** and **Previous** buttons to move through the comments.

**Add review topics and comments**
During your review session, you can edit the map as usual. New topics are shown as visually distinctive Review Topics so they can be seen easily by other reviewers. Similarly, new paragraphs in the notes are shown as colored Review Notes.
You can add your own comment at any time.
Colors for Review Topics and Notes are automatically assigned to each reviewer. You can pick your own colors and choose to include a prefix or an icon using the Review Settings. In addition, you can enable a review setting to automatically insert comments for topics that you add, modify or remove.

**Change Review Settings**
- On the **Review** tab, in the **Tracking** group, click **Settings**.

**Add or modify a comment**
1. Select a topic either with or without comments
2. On the **Review** tab, in the **Comments** group, click **New Comment**.
3. Enter your comment. It will be identified with your user information.

**Remove a comment**
1. Select the topic, and if the **Comments** window is not already open, click the Comment icon
2. Select the comment in the list.
3. Click **Remove Comment** in the **Comments** window.

While you can remove other reviewer's comments, etiquette dictates that only the primary contributor should do this after everyone has reviewed the map.
End your review session

The Review session remains active until you end it:
- On the Review tab, in the Tracking group, click End Review.

Send the map to the next reviewer
1. On the Review tab, in the Tracking group, click Send Map.
2. Then do one of the following:
   - Click Reply to Sender to send the map back to the reviewer who sent it to you.
   - Click Forward to, and then click the reviewer's name to send the map back to a different colleague who has already reviewed the map.
   - Click Forward to send the map to a new reviewer (you'll enter their email address on the message that is created).
   - On the File tab, click Share, Email, and then click Send as Attachment for Review.

3. The Send To wizard creates an email message with the map as an attachment (or with a link to the map) for review. When the recipient opens the map it will automatically start a review session.

   **READ HINT**

   You may want to let the next reviewer know how to identify topics you added (for example, "My additions are in green.") if you do not have the Record all map changes in comments setting enabled in the Review Settings. You can add this information to the email message you send.

   Need to take a break from the review? Save the map before leaving the review session (i.e. before you click End Review). The next time you open the map it will start the review session automatically.

Finish the review

Once everyone has reviewed the map, one person (usually the primary contributor) can do the final editing: accept or reject review topics, make other modifications in accordance with the comments, remove all the comments, and then send the finalized map to all reviewers.

Accept or reject Review Topics
1. On the Review tab, in the Tracking group, click Start Review.
2. Use the commands in the Changes group to move to the Next or Previous Review Topic.
3. For each topic choose either:
• **Accept** - changes the topic to a "normal" topic, removing review colors, prefixes and icons. Click the command's arrow to **Accept All Review Topics**.

• **Delete Review Topic** - removes the topic from the map. Click the command's arrow to **Delete All Review Topics in Document**.

Then you can click **End Review** and go on to inspect the comments and modify the map accordingly. Rest your pointer over any Comment icon to see its content, and modify the map as you desire. When you are finished you can optionally remove all Comments from the map. (You will probably want to do this if reviewers inserted comments automatically to record their changes.)

**Remove all comments**

• On the **Review** tab, in the **Comments** group, click the **Remove** arrow, and then click **Remove Comments in All Topics**.
Save maps, templates, and themes

You can save a map that you create or modify as you usually save any document, using the Save and Save As commands. In addition to saving the current map in its native format (\.mmap file), you can use the commands under the Save tab in Save As to:

- Save all maps
- Save a copy of the current map
- Save a filtered copy of the current map
- Save all maps

In Save As, under the Change File Type tab you can also:

- Save the map in the default format
- Save the map in XML format
- Save the map as a template (\.mmat) which can be used as the basis for creating maps,
- Save the map as a theme file (\.mmas) containing just the map's default formatting information
- Open the Save As dialog to select from other possible file types

To save only a part of the map, you can export topics to a new map (for example, if your map becomes large, or if you just want to duplicate the topics). You can also select a topic to save as a Map Part for easy re-use on this or other maps.

You can change options for how your maps are saved. You can also modify map settings for saving your current map to share with macOS users and saving a preview image of the file.

See Export maps for more information on exporting both partial and complete maps to a variety of formats.

Mindjet online features

See Save a map to Mindjet Files for more information on saving maps online to Mindjet Files.

Save the current map

You can save the currently-open map in several ways:
The **Save** command saves the map with the same name and location and the current map remains open.

The **Save as** command saves the map with a different name or in a different location, the current map closes, and newly-saved map opens.

**Save the map with the same name**

1. Do **any** of the following:
   - Click the **Save** button on the Quick Access toolbar.
   - Or
     - Click the **File** tab, and then click **Save As**.
     - Press CTRL+S
   - Right-click the map’s workbook tab, and then click **Save**.

2. If this is a new map:
   - If you have enabled the prompt option, the **Properties Summary** page will appear so you can enter information about the map.
   - Enter the file name and location in the **Save As** dialog, then click **Save**.

   **READ HINT**
   Use the MindManager **Save** options to set the default folder for saving maps.

The map remains open in the MindManager mapping window.

**Save the map with a different name or in a different location**

1. Click the **File** tab, click **Save As**, then select Save As to open the Save As dialog,
2. In the **Save As** dialog, choose a folder, enter the **File name**, then click **Save**.

The new map opens in the MindManager mapping window.

**READ HINT**
To export your map in another format you can choose a different format in the **Save As** dialog **Save as type** list or use the Export command in the File menu.

**Save a copy of the map**

When you save a copy of a map, the current map remains open. Any changes you subsequently make to the map will not affect the copy you’ve saved.

1. Click the **File** tab, click **Save As**, and then select **Save a Copy**.
2. Enter the file name and location in the **Save As** dialog, then click **Save**.

**Save the map as a filtered copy**

If you have filtered the map, you can save just the visible topics in a new map.

1. Click the **File** tab, click **Save As**, and then click **Save a Copy of Filtered Map**.
2. In the **Save As** dialog, choose a folder, enter the **File name**, then click **Save**.
Save all open maps

- Click the File tab, click Save As, and then select Save All.

Encrypt map with passwords

You can protect your map so that no one can open it without knowing the password.

1. Click the File tab, click Info, and then click Encrypt Document.
2. Enter the password(s) for the map and click OK.
3. Save the map.

⚠️ READ NOTE

From now on, you cannot open the map or modify it without entering the password(s).

Save the map in XML format

1. Click the File tab, click Save As and then select Change File Type.
2. Click Save as MindManager Map (XML).
3. In the Save As dialog, choose a folder, enter the File name, then click Save.

The map is saved as an "xmmap" file. If you continue to edit the map, then use the Save command, your changes will be saved to this file in xml format. You can save this map in .mmap format again by using the Change File Type - Save as MindManager Map command.

Save the map as a template

1. Click the File tab, click Save As and Save As again, click Save As Type, and then click MindManager Template (*.mmt; *.xmmat).
2. In the Save As dialog, choose a folder, enter the File name, and then click Save.
3. If this is a new template, you may see the Properties Summary page where you can enter comments and other information about the template. When you click OK, the template is saved.

Make a note of this location in case you want to add the Template to the New Map dialog (it will be shown whenever you create a new map), add it to the Organizer, or send it to another user.

Save the map's default format settings as a theme

1. Click the File tab, click Save As and Save As again, click Save As Type, and then click MindManager Theme (*.mmas; *.xmmas).
2. In the Save As dialog, choose a folder, enter the File name, then click Save.
3. If this is a new theme, you may see the Properties Summary page where you can enter comments and other information about the theme. When you click OK, the theme is saved.

Make a note of this location in case you want to apply this theme to another map from the file, add it to the Organizer, or send it to another user.
MindManager User Guide

Save AutoRecovery information for maps

MindManager provides protection from abnormal shutdown (eg if the power goes out or your system crashes) by automatically saving AutoRecovery information at regular intervals. If your system shuts down before you save your map, MindManager will offer to restore it when you re-start your system and start MindManager again.
Print, Export, and Send

Print

Printing a map from MindManager is similar to printing in most other applications.

You can print:
- The entire map, or just selected topics
- One or more slides
- The map (or selected topics) in outline form
- The Notes for selected topics or all topics
- The Gantt Chart for the map

Topics print as they are displayed (expanded or collapsed). Topics hidden by a Filter do not print.

Use the Show / Hide command to temporarily hide any map elements you don't want to print.

Use the Print options to select the printer, print range, number of copies and scaling (multiple page) options. There are special options for printing large maps.

The Page Setup options control the map's orientation, page margins, headers and footers, border and more.

Print Preview lets you see how the printed map will look with the print and page setup options you've chosen.

Buttons in each of these dialogs let you switch between the various option screens.
Print the map

Do one of the following:

To print the map immediately on the default printer, click Quick Print on the Quick Access Toolbar, or click File, Print, Quick Print.

Or

To adjust the Print options before you print, click File, then click Print to see the Print dialog. There, you can specify the printer, print range, number of copies and scaling options.

- Use the High-contrast topic lines option to print topic lines in black or white (depending on background color). This can make topic lines more visible on high-resolution printers.
- Click Page Setup to set additional options, or click Preview to see the print preview.

Print a large map

If a map is large, the print can become difficult to read if it is printed on a single letter-sized page. If you don’t have access to a large-format printer, you can create a poster-sized version of your map by printing it on several pages, "billboard style".

1. Click the File tab, click Print, and then click Print to see the Print dialog.
2. Under Scaling choose the number of pages and the arrangement you want to use to print the map.

Read Hints

To check the output, click Preview to see the Print Preview. You can view two pages at a time or step through the pages.

Use the Page Setup options to add page separators and page numbering if desired.

Print selected topics

You can choose to print only a selected topic and its subtopics. This is the simplest way to print a single topic tree. If you want to print several topics, but not the entire map, you can filter out the other topics and then print the map.

1. Select the topic you want to print.
2. Click the File tab, click Print, and then click Print.
3. In the Print dialog, under Print Range, select Primary selected topic.
4. Click Preview if you want to verify what will be printed.
5. Click OK to print the map.
Print slides

You can print a single slide, a range of slides, or all slides. Each slide is printed on a separate page. The gray box on each slide indicates the area that will be printed.

1. Use Slides View to view the slide you want to print (If you want to print a single slide), or view any slide (if you want to print a range or all slides).
2. Do one of the following:
   - In the Slides pane, Slides pull-down, click Print Slides.
   - Or
   - Click the File tab, click Print, and then click Print.
3. In the Print dialog, under Print Range, select All Slides, Range, or Selected Slide.
4. Click Preview if you want to verify what will be printed.
5. Click OK to print the slide(s).

Print an outline

You can print an outline from Outline view.

Printing from Outline View offers the advantage of printing topics with varying levels of detail, and (like Word export) you can choose to print only the topics you select.

When MindManager prints a map displayed in Outline View, it prints just what you see. This means that if a topic is collapsed, its subtopics are not printed. This allows you to print the outline with varying levels of detail for individual topics. You can also choose to print only the topics you have selected, or choose to print only the topics with specific content.

You can also create a simple outline or export the map to Word to create a more detailed outline.

Print a map as an outline

1. If you only want to print certain topics, select them now. Expand or collapse topics (use the icons) to get the desired level of detail in the printed outline.
2. Click the File tab, click Print, and then click Print to see the Outline Print dialog. Options
3. Optional - Click Page Setup to choose margins and other settings for your printed outline. These settings are saved with the map, so the next time you print the same settings will be used.
4. Make your selections in the dialog and click Print.

Print Notes

You can quickly print the Notes for any single topic or print all the Notes on the map.
1. Do one of the following:

   Right-click on the topic’s Notes icon.  
   Or  
   Click the File tab, and then click Print.

2. Click either:

   - **Quick Print Notes** (sends the notes for the current topic directly to the default printer)
   - **Print Notes** to print the notes for the selected topic or all topics (displays the Print dialog so you can adjust the Print options).

   MindManager uses Microsoft Word for this function.

*Print tasks as a Gantt Chart*

If your map contains tasks, you can print them as a Gantt chart. You must display the Gantt chart to print it.

   - Click the View tab, click Gantt Pro (Enterprise) or Gantt Chart (Professional), and then click Print.

*Change the Page Setup options*

You can configure the Page Setup options before you print or access these options from the Print or Print Preview dialogs.

The page setup options let you choose the following options.

   - the paper size to use
   - the orientation (portrait, landscape or automatic)
   - the page margins (units used are determined by your system settings)
   - whether to print the...
     - background image (turn this off to reduce printing time or to print a PDF file),
     - page separators (registration marks for multi-page maps),
     - page numbers (i.e. “Page 2 of 4” for multi-page maps)
     - or a border.
   - headers or footers with a choice of font and justification. Enter your own text or click the arrow to choose from a set of standard annotations such as the date and time, file name, etc. The Author information comes from the map’s General Properties settings.

Other options such as Print Range, Copies and Scaling (multiple pages) are set in the Print dialog.
**Change the Page Setup**

1. **Do one** of the following:

   - Click the **File** tab, click **Print**, and then click **Page Setup** (or **Gantt Page Setup** if you are printing a Gantt chart).

   - **Or**

   - Click **Page Setup** (or Gantt Page Setup) from within the **Print** or **Print Preview** dialog.

2. Choose the options you want to use for printing. These options are saved with the map.

   - **READ HINT**

   - The **Automatic** orientation option allows MindManager to choose the best fit for your map on the page.

3. Click **Print** to print the map or **Preview** to verify the Page Setup.

   These settings are saved with the map so the next time you print, the same settings are used.

**Display the Print Preview**

The Print Preview options shows you how the map will look when printed according to the Print settings and Page Setup options you have selected.

1. **Do one** of the following:

   - Click the **File** tab, click **Print**, and then click **Print Preview**.

   - **Or**

   - Click **Preview** from within the **Print** or **Page Setup** dialog.

2. If you have chosen to print the map on more than one page (for large maps or multiple slides) you can view the individual pages here using the **Next Page** and **Previous Page** commands to step through them, or click **Two Page** to see two pages at a time.

   Use the **Zoom** commands to see more or less detail.

3. When you’re ready to print, click **Print**, or click **Page Setup** to go back and modify the page options.

   The map is displayed in the Print Preview window until you close it or print the map.
Export maps

You can export your map (or in some cases just the selected topics) to a variety of other formats. You can also create read-only, interactive files in HTML5 format.

You will find all your available export options on the File tab's Export pane.

⚠️ READ NOTE
If the export you want to use does not appear in either place, you must enable the corresponding export add-in using the Add-ins options. Simple outlines (only in the Save as type list) are enabled using the Transformations options.

Standard export options

<table>
<thead>
<tr>
<th>Export option</th>
<th>What is created</th>
</tr>
</thead>
<tbody>
<tr>
<td>Export as HTML5 map</td>
<td>Interactive, read-only map displays in modern browsers. Lets you expand/collapse topics and view major map features such as notes, markers, task info, etc.</td>
</tr>
<tr>
<td>Export as Image</td>
<td>Bitmap image in BMP, GIF, JPEG, PNG with choice of color depth, size and resolution. Vector image in EMF or WMF formats</td>
</tr>
<tr>
<td>Export to Microsoft Excel</td>
<td>An XLSX or XLS spreadsheet file that can be opened by Microsoft Excel</td>
</tr>
<tr>
<td>Export to Spreadsheet (CSV)</td>
<td>A CSV (comma-separated-value) spreadsheet file that can be opened by many popular spreadsheet programs, including Microsoft Excel.</td>
</tr>
<tr>
<td>Export to OPML document</td>
<td>Map is converted to an OPML document. Resulting OMPL map is grey-scale; icons and other visual markers are removed.</td>
</tr>
<tr>
<td>Pack and Go</td>
<td>ZIP file of .mmap files, with option to include linked maps and documents, and password protection</td>
</tr>
</tbody>
</table>
Work with Maps

Export an HTML5 map

When you create an HTML5 map, MindManager exports the current map as an .html file in HTML5 format that can be viewed independently from MindManager. The exported map is self-contained and interactive: Viewers can expand and collapse branches, view notes, attachments, links, comments, and more. You can modify the default HTML5 export options (File > Options, HTML5 Export).

Not all map elements are supported. See the HTML5 map feature support table for more details.

You can use the Send as Attachment command to automatically create an email message with the HTML5 map as an attachment.

1. Click the File tab, click Export, choose HTML5 Interactive Map.
2. Choose the location for the exported file, and enter its name.

HTML5 maps cannot be edited.

Export the map as an image file

MindManager can export maps to various graphics formats:

BMP       GIF       JPEG       PNG       WMF       EMF

This command exports the entire map. If you only want an image of a part of the map you can copy topics then paste them as a bitmap in the target application.

1. Click the File tab, click Export, then under Export, select Image.
2. In the Save As Type list, click the image format you want to export.
3. Choose a folder, enter the File name, then click Save.
4. An option dialog is shown where you can define the color resolution, transparency, and size for bitmap files.

Copy map or topics as a bitmap

In many applications you can paste your map, or selected topics, as a bitmap image:

1. In MindManager, select the central topic (copies the whole map) or the topics you want to copy, and then press CTRL+C.
2. Switch to the target application, then use the Paste Special command to paste the map or topics as a bitmap.

Export to Microsoft Excel

You can export your map to a Microsoft Excel spreadsheet.

Export an entire map to an Excel spreadsheet
1. Open the map.

**READ HINT**

Only visible topics are exported. This means you can apply a filter to hide a set of topics you don't want to include in the file.

2. Do **one** of the following:

   Click the **File** tab, click **Export**, then under **Export**, select **Microsoft Excel**.

   **Or**

   Click the **File** tab, click **Save As**, then under **Local** select **Save As**, and in the dialog's **Save as type** list choose **Microsoft Excel Spreadsheet**.

**READ NOTE**

If you do not see this option, check to see that you have the corresponding **add-in** installed and enabled.

3. In the **Excel Export Settings** wizard choose one of the following options:

   - **Quick export** to use the default export settings
   - **Custom export** to tailor the export to your liking.
     
     Use the **Next** and **Back** buttons to scroll between the settings pages.

4. Click **Export** when you have set the options to your liking.

5. A message appears when the export is done. You can **Open** the file to check it, **Open Folder** where it was saved, or **Close** to return to MindManager.

---

**Export selected topics to an Excel spreadsheet**

1. In MindManager, open the map and select the topics you want to export. (The export will include the subtopics the topics you select.)

2. Right-click on one of the topics, click **Send Topic(s) To**, and then click **Microsoft Excel**.

   **READ NOTE**

   If you do not see this option, check to see that you have the corresponding **add-in** installed and enabled.

3. Select the export options in the **Excel Export Settings** wizard.

4. A message appears when the export is done. You can **Open** the file to check it, **Open Folder** where it was saved or **Close** to return to MindManager.

---

**Export to Spreadsheet (CSV)**

You can export your entire map or only a portion of it to a CSV (comma-separated-value) file that can be imported by Excel and many other popular spreadsheet programs.
Export an entire map to a CSV file

1. Open the map.

   **READ HINT**
   
   Only visible topics are exported. This means you can apply a filter to hide a set of topics you don't want to include in the file.

2. Do one of the following:

   - Click the **File** tab, click **Export**, then under **Export**, select **Spreadsheet (CSV)**.

   - Or
   
     Click the **File** tab, click **Save As**, then under **Local** select **Save As**, and in the dialog's **Save as type** list choose **Comma-Separated Values**.

   **READ NOTE**
   
   If you do not see this option, check to see that you have the corresponding add-in installed and enabled.

3. In the **CSV Export Settings** wizard choose one of the following options:

   - **Quick export** to use the default export settings
   - **Custom export** to tailor the export to your liking.
     
     Use the **Next** and **Back** buttons to scroll between the settings pages.

4. Click **Export** when you have set the options to your liking.

5. A message appears when the export is done. You can **Open** the file to check it, **Open Folder** where it was saved, or **Close** to return to MindManager.

Export selected topics to a CSV spreadsheet

1. In MindManager, open the map and select the topics you want to export. (The export will include the subtopics the topics you select.)

2. Right-click on one of the topics, click **Send Topic(s) To**, and then click **New Spreadsheet (CSV) File**.

   **READ NOTE**
   
   If you do not see this option, check to see that you have the corresponding add-in installed and enabled.

3. Select the export options in the **CSV Export Settings** wizard.

4. A message appears when the export is done. You can **Open** the file to check it, **Open Folder** where it was saved or **Close** to return to MindManager.
Export to OPML document

You can export your entire map or only a portion of it to an OPML document. Because OPML is a very simplified format, the resulting OPML map will be grey-scale with icons and other visual markers removed.

Export an entire map to an OPML file

1. Open the map.

   - **Read Hint**
     
     *Only visible topics are exported. This means you can apply a filter to hide a set of topics you don’t want to include in the file.*

2. Do one of the following:

   - **Click the File tab, click Export, then under Export, select OPML.**
   - **Or**
     
     *Click the File tab, click Save As, then under Local select Save As, and in the dialog’s Save as type list choose Outlines-OPML.*

3. The default name for the document will be the map name, but you can change this and the location where it is saved. Click **Save**.

Export selected topics to an OPML document

1. In MindManager, open the map and select the topics you want to export. (The export will include the subtopics the topics you select.)

2. Right-click on one of the topics, click **Send to**, and then click **OPML Document**.

Pack and Go

The **Pack and Go** command is used to add maps, and optionally, linked documents to a ZIP file. A Wizard guides you through the steps to package the maps. You can use this command to package a single map and its linked documents in Map View or for multiple maps in Linked Maps View. This makes it easy to move the map to a different location (for example, to a central location on your intranet, or to a different system if you are doing a presentation on a different computer).

These same steps are used to create an archive when using the **Send** feature to email a map or maps.

Package maps and documents

1. Click the **File** tab, click **Export**, then select **Pack and Go**.

   - **Read Hint**
     
     *In the Linked Maps View, click the Pack and Go command.*
2. The Pack and Go wizard starts.
   - On the first screen you can choose which files to add to the ZIP archive. Options
   - If you do not include the linked documents, the links remain in the map, but do not function. Only the first level of linked maps is included - this means that if the main map links to a child map, the child map is included, but any maps that the child map links to are not.
   - On the second screen you enter the path and filename for the ZIP file. You can also add a comment to display when the files are unpacked from the archive. Click finish to start the packaging process. Options

3. When the packaging is complete, a message appears, and you can open the archive, open the target folder or close the wizard.

⚠️ READ NOTE

If the packaged map includes links to maps or documents and you include these in the archive, the links will not function unless you first extract the files from the archive.

Export to Microsoft Office applications

<table>
<thead>
<tr>
<th>Export option</th>
<th>What is created</th>
</tr>
</thead>
<tbody>
<tr>
<td>Export slides as a Microsoft PowerPoint Presentation</td>
<td>Single slide or complete presentation with topics as an outline with bullet points, or as PowerPoint objects</td>

</tr>
<tr>
<td>See Work with Microsoft Project</td>
<td></td>
</tr>
</tbody>
</table>
Create a simple outline

MindManager can export your map to a simple outline in HTML or text format.

Export a map as a simple outline

1. Click the File tab, and then click Save As.
2. In the Save As dialog choose the format you want to export from the Save as type list: Outlines - Plain text or Outlines - Web Page.
3. Choose folder, enter the File name, then click Save.

Mindjet online features

You can save the file online to Mindjet Files by clicking Save in Mindjet Files, and then selecting a location. See Collaborating with Mindjet for more information.

Read Hint

For a more sophisticated outline export, you can use the Microsoft Word export feature, or export your map as web pages.

Send maps

The best method to use for distributing your maps to others depends on whether the recipients are MindManager users.

Everyone:

You can send the map as a self-contained HTML5 map for viewing. HTML5 maps are interactive: recipients can expand and collapse topics, read topic notes, and more. HTML5 maps can be viewed in a standard browser—no special software is required.

MindManager users only:

You can send a packaged map (and, optionally, its linked documents) in a .zip archive for viewing and editing. The recipients can unpack the
map and related documents, and then view and edit them using MindManager. ! **READ NOTES**

See Work with Mindjet Files & Tasks for more information about sending and sharing maps with this service.

The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

---

### Send an HTML5 map

You can send your map as a self-contained document in HTML5 format for viewing. HTML5 maps include an interactive map: recipients can orient it, expand and collapse topics, read topic notes, search for text, and print selected topics or the entire map.

1. Open the map.
2. Click the **File** tab, click **Share, Email**, then in the **Email** list, and select **Send as Attachment (HTML5 Interactive Map)**.

An email message will automatically appear, with a .html file version of your map attached, and the standard instruction "I've shared a MindManager map with you. You can view it using your browser" in the body of the message. Simply add recipients, edit your message as needed, and send it.

! **READ NOTES**

Your email program must be set up as a MAPI server to use this feature. Most email clients have this option. These commands will not work with web-based email such as Gmail, Yahoo Mail, Outlook.com, or AOL. In these cases, you can create the HTML5 map, and then send it as an email attachment to the desired recipients.

HTML5 maps cannot be edited and do not support all map elements. See the HTML map feature support table for more details.

### Send the current map to other MindManager users

**NOTE:** Users will only have access to MindManager's SharePoint features if using MindManager Enterprise. If you share a map that includes SharePoint elements with a user who is not using MindManager Enterprise, SharePoint icons may be modified.

You can send the current map, Map Template, or Map Theme to other recipients who are MindManager users. If you are conducting a review you can use the "for Review" option when you mail the map.
When you send a map, the current map, template or theme (and optionally, its linked documents) are used to create a ZIP archive. In the Linked Maps View the **Send as Email** command combines multiple linked map files into one ZIP file.

**Send a map, template or theme**

1. Open the map, template or theme.
2. Do one of the following:
   - Click the **File** tab, click **Share**, **Email**, then in the **Email** list, select **Send as Attachment**.
   - Click the **File** tab, click **Share**, **Email**, then in the **Email** list, select **Send as Attachment For Review**.

The two "Send" commands are similar. The "For Review" command adds a Review follow-up flag to the Outlook email and changes the subject line to "Review ....". Also, the map automatically opens in Review mode on the recipient's system.

**Send maps from the Linked Maps view**

- In Linked Maps view, select one or more maps. In the **Linked Maps** group, click **Send as Email**.
- If you select the parent map, only the parent and level 1 maps will be sent. To send maps at level 2 and beyond you must select them.

**Create the ZIP archive**

You will be prompted for options to use for the ZIP archive. These are the same steps used by the **Pack and Go** feature to create an archive.

> **READ NOTE**

Since attachments are stored within the map file itself, and not as separate files, they are always included automatically when you send a map.

The map(s) and documents are compressed into a ZIP archive, and an email message is created with the archive included as an attachment.

> **READ NOTE**

Your email program must be set up as a MAPI server to use this feature. Most email clients have this option. These commands will not work with web-based email such as MS Hotmail or AOL. In these cases, you can use the **Pack and Go** command to create the archive and then send it as an email attachment to the desired recipients.
You can publish MindManager maps online. Only people that you have shared the link with can access your online map. It’s viewable in their browser, without having MindManager installed.

You must be signed in to your free MindManager account to publish maps online. If you don’t have an account, you can create one the first time you publish a map.

**Publish a map**

1. Open the file that you want to publish.
2. On the **Home** tab, click the **Publish** drop-down, click **Start New Publish**.
3. On the Publish Preview page, choose one of the following:
   - **Publish Privately** — only those with the link can view
   - **Publish Privately with Password**, and type a password in the **Enter Password** box — only those with the link and password can view

You can share the online map by doing any of the following:

- share the link — click **Copy Link**, and paste it in an email.
- embed in a website or blog — click **Copy**, and paste the published map code in a website or blog.
- post to social media sites — click the corresponding social-media site button, such as Facebook, Twitter or LinkedIn, and signing in.

Click **Advanced Options** to access settings for allowing commenting and downloads, automatically displaying the online map in Presentation mode, disabling the password, and choosing a storage location.

**Read Hint**

You can preview the online map by clicking **View**. If you want to delete the online map, click **Undo**. You can delete an online map at anytime by opening the map file and clicking **Published** in the top-left corner of the map, and clicking **Un-publish**.

**Publish an updated map**

After you’ve made changes to the map, click **Published** in the top-left corner of the map, and clicking **Publish Update**.

**Read Hint**

You can view, undo or modify sharing options after publishing an update.

**Read Note**

The **Publish Update** option is only available when changes have been made to the map.
Use Zapier

**What is Zapier?**

Using Zapier, leverage your MindManager maps and your favorite productivity apps for increased efficiency. Zapier is an online tool that allows you to connect two supported applications using automation. Many MindManager users employ maps to create project and task plans. Now, with Zapier integration, a MindManager user can send selected map topic or task data to, and receive queried third-party data in their map from, over 700 other applications (including dozens of project and task management applications):

<table>
<thead>
<tr>
<th>Project Management</th>
<th>Email / Messaging</th>
<th>Social Media / Publishing</th>
<th>Office tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trello</td>
<td>Gmail</td>
<td>LinkedIn</td>
<td>Dropbox</td>

<tr>
<td>Asana</td>
<td>Slack</td>
<td>Facebook</td>
<td>Google Drive</td>
</tr>
<tr>
<td>Todoist</td>
<td>MailChimp</td>
<td>Twitter</td>
<td>ZenDesk</td>
</tr>
<tr>
<td>Basecamp</td>
<td></td>
<td>Instagram</td>
<td>Docs</td>
</tr>
<tr>
<td>Salesforce</td>
<td></td>
<td>WordPress</td>
<td>Google Docs</td>
</tr>
<tr>
<td>GitHub</td>
<td></td>
<td></td>
<td>Dropbox</td>
</tr>
<tr>
<td>Jira</td>
<td></td>
<td></td>
<td>Google Docs</td>
</tr>
</tbody>
</table>

Zapier offers free and paid plans to support your integration requirements, and new Zapier-supported applications are frequently added. For more information, and to see if your favorite app is supported, visit [Zapier.com](https://zapier.com).

**How do I use MindManager with Zapier?**

It's easy! Use MindManager to develop plans using maps and flowcharts, then Zap topics (and the data they contain) to:

- assign tasks in your favorite task management application, like Trello or Basecamp
- generate emails based on topic information
- create Google documents that can be shared with your team

And so much more—there are dozens of ways to use leverage MindManager task data using Zapier!

Let's say you want to share map data with Trello:

1. **Create a map of your project**: include pertinent map data such as start and due dates, progress and priority makers, or milestones.
Add topic tags, resources, notes or hyperlinks—whatever you need to keep your team on task and on time.

2 Set up your Zaps: maybe you want to be able to convert topics into boards, and subtopics into cards, with all the associated topic data transferred from MindManager to Trello. Simply build one Zap to create Trello boards, and another to create cards within those boards.

3 Zap topic data: now, when you’re in your map, click the Zapier button to send the selected content directly to Trello, updating your team and assigning tasks as needed.
The result? Here’s your Trello board, with individual cards that display topic data Zapped from your MindManager map.

**NOTE:** Zapier and other referenced applications may not be currently localized. To provide accurate on-screen guidance, on-screen text prompts and screen captures that reference Zapier or other applications’ on-screen prompts are in English.

How do I get started with Zapier?
To use Zapier, first set it up (connect accounts and create a Zap). Once set-up is completed, you can start sending map topics to, and receiving map data from, your favorite applications. To access the most current information on MindManager’s Zapier integration, be sure to enable online help.

**Set up Zapier**

What do you want to do?

Create a MindManager account  
Create a Zapier account  
Create a Zap  
The Zapier dashboard  
Send map data using Zapier  
Receive map data using Zapier

See also:

- What's a Zap?
  - Zaps are automations that follow If/then rules. Each Zap consists of one trigger (“if this happens”) and one action (“then do this”) that work via a connection between two applications, the trigger app (the application that Zaps are sent from) and the action app (the application that Zaps are sent to).
  - To use Zapier, you'll need to:
    - Connect two supported applications via Zapier (in this case MindManager and another Zapier-supported application).
    - Set up the rules for each Zap you create.

- READ HINT
If you need help, check out "How to Use Zapier" in the Zapier Learning Center or search the Zapier Help Center for common topics and guidance on connecting specific applications.
To access the most current information on MindManager's Zapier integration, be sure to enable online help.

Create a MindManager Account

To use Zapier, you'll first need to create a MindManager account. This account will be used to allow Zapier access to your maps.

⚠️ READ NOTE

You will need to have online access to set up a MindManager account or to use Zapier.

1. Do one of the following:
   - On the Tasks tab, in the Send Tasks To group, click the Zapier drop down then click Set Up Account.
   - Or
   - On the Advanced tab, in the Zapier group, click the Zapier drop down then click Set Up Account.

✔️ READ HINT

If you have already created a MindManager account, click Sign In and skip to step 3.

2. In the Set Up Account dialog, enter:
   - name
   - email
   - password
   Or sign in using Google+.
3. Click Sign In to create your Zapier account.
4. Once your MindManager account is set up, you will see a confirmation message.

Create a Zapier account

Once you've created your MindManager account, you need create an account in Zapier.

1. Do one of the following:
   - In the MindManager Account Confirmation dialog box, click Launch to open the Zapier website in your designated browser.
   - Or
   - Navigate directly to the Zapier website in your preferred browser.
2. Follow the instructions on the Zapier website to create an account; if you already have an account, log into it.

With both accounts created, you can now create Zaps.

Create a Zap

Setting up Zapier is done on the Zapier website in a guided, step-by-step process. Because there are hundreds of applications you can link to using Zapier, creating a Zap will vary depending upon the applications you wish to connect.

Let's look at a test case: setting up a Zap between MindManager and Trello.

**NOTE:** Zapier is not currently localized. To provide accurate on-screen guidance, text and screen captures that reference Zapier on-screen prompts are in English.

1. In Zapier navigation bar, click **Make a Zap**. The Zapier interface asks you to choose a trigger and action:

   **First:**

   **Choose a Trigger app:** When creating a Zap that allows you to send topic information from MindManager to another app, the trigger app is always Mindjet MindManager.

   **Choose an Action app:** choose the app where you want to send MindManager map topic data, for example, Trello.

   **Then:**

   **Choose a trigger:** While some Zapier-enabled applications allow you to choose from a variety of trigger activities, when you select Mindjet MindManager, you will be offered one selection, Zap topics.

   **Choose an action:** You choose the action you want to occur. The potential action will vary, depending upon the application you are linking to. For example, if the action app is:

   - *Gmail,* you can choose "send email" (create and send an email message that contains the map topics info) or "create draft" (create an email message with the map topic info, but do not send it).
   - *Evernote,* you have the option of "create note," "create tag," "create reminder," or "append to note."
Work with Maps

- *Slack*, you can select "send direct message" or "send channel message."

Since we're linking to Trello in the example above, we'll choose "Create Board." This means that the topic information Zapped to Trello will be used to create a new Trello Board.

2. Connect accounts:

   Select a Mindjet MindManager account
   - Connect your MindManager account to allow Zapier access to it.

   Select the Action application account
   - Connect Zapier to the account you have for the action application and allow access to it.

   **In this case, we'll be linking to a Trello account.**

   **Test this account**
   - To ensure the accounts have been correctly accessed by Zapier, click the **Test This Account** button.

   **Read Hint**

   You can opt to skip testing altogether.

3. Now, you need to set up your Trigger Filters. Zapier lets you set conditions so that the Zap will only activate if those conditions are met.

   **First**:

   In the Filter section, click **Add Custom Filter**. The **Add a Filter** section opens with three entry fields:
**Field** lets you select from a list of MindManager topic information, including Topic Text, Due Date, Tags, Priority, Resources, Notes, Hyperlink, Subtopics Text, Milestone, Progress, Start Date, and others. Choose the topic information that you want to use as the filter.

**Condition** allows you to set the parameters of the content entered in **Value**. For example, if value contains a date, you can set the condition to (Date/Time) Greater Than, (Date/Time) Less Than, or (Date/Time) Equals.

**Value** lets you type in the specific value the field must meet for the topic information to be Zappable. This could be a text string, a date, or a numeric.

Select the criteria you wish to use. Once you create a filter, *every* topic you wish to send using this Zap must meet the criteria defined in the filter, or you will get a Zapier error message.

In the example above, a Zap will be sent from MindManager to Trello to create a new card *only* if the selected topic has a priority marker of 1 or 2. Topics with a lower priority can not be Zapped.

You can set filters when you create the Zap, or later edit the Zap to add or change filters.

4. Customize the Action by matching up the MindManager topic information to target fields in the Action app.

For the Trello Board Zap above, the Organization name is skipped; Topic Text is used for the name of the new board, and the board's description includes the Resources included in the topic, the topic's Start and Due dates, any Notes or Links, and the current Progress of the topic.
When you send a Zap, MindManager information is sent and used by the Action application. How the information is employed varies depending upon the application—and the instructions you give Zapier in this step. Each application will offer a specific selection of information fields, some required, and others optional.

- Some fields must have information typed into them.
- Others include a drop down menu of MindManager topic data. Click the **Insert Fields** button to access the options and select the one(s) you want to associate with the field:
  - topic text
  - due date
  - tags
  - resources
  - priority
  - notes
  - hyperlink
  - subtopics text
  - all branch info (this includes all the topic and subtopic info, and all markers for the branch)
  - milestones
  - progress
  - start date

For example, when creating a Zap that will build a Trello board from a MindManager map topic, you are offered three fields:

- Organization (optional)
- Name (of the board—required)
- Description (of the board—required)

**NOTE:** Once you match the MindManager map data to the Action applications fields, your map topic must include all the designated types of data, or you will get a Zapier error message. In the Trello example above, if you do not have a "Due Date" set for the topic, you will receive an error message when you try to Zap that topic.

After customizing the Action, test the Zap.
Click the **Test** button.

**NOTE:** You may need to return to your MindManager map and Zap a topic to successfully complete this test.

- Zapier will offer 1-3 samples to test.
  - Click **See trigger sample** to review the trigger data that will be included in the Zap.
  - Click **See action sample** to review the actions that will be taken by the Zap.
- Click **Test Zap with this sample** to run a test of the Zap.
  - If the test is successful, you will receive a notification:
    - ![Success](image)
  - If the Zap is not successful, you will receive an error message noting the specific problem and telling you what to do next.

Name the Zap and turn it on.
Many people set up more than one Zap.
- For example, you may create a Zap to convert MindManager topic data into a Trello card, and another to send reminder emails via Gmail.
- You may even have more than one type of Zap for the same application: one to create a Trello card, one to create a Trello board, and one to create a Trello list.

To keep track of your different Zaps be sure to give each Zap a distinctive name.

We made a Zap that used MindManager topic data to create a new board in Trello so a good name might be "Trello Board."

Click **Turn Zap on** to activate it.

**NOTE:** Data sent using Zapier is not synced to the map. If you make changes on your map, it will not be updated in the Action app. You must re-send the Zap to update the information.

**Zapier Dashboard**

Once you have successfully set up your Zap, you will see your it listed on your Zapier dashboard, under the name you gave it. You can then start **Zapping from MindManager topics.**

If you have set up more than one Zap, use the dashboard to manage them:
- Turn Zaps on or off
- Delete Zaps
- Create new Zaps
- Save draft Zaps before activating
- Track your account usage
Once you have set up Zapier, you can start using your Zap to send topic data from MindManager to the Zap-enabled application(s) in your Zapier account.

If you need help, check out "How to Use Zapier" in the Zapier Learning Center or search the Zapier Help Center for common topics and guidance on connecting specific applications.

To access the most current information on MindManager's Zapier integration, be sure to enable online help.

NOTE: Data sent using Zapier is not synced to the map. If you make changes on your map, it will not be updated in the Action app. You must re-send the Zap to update the information.

Send selected Topics to Zapier
To send a topic using Zapier, you need to have set up Zapier and created a Zap.

Send a Zap

NOTE: Zapier is not currently localized. To provide accurate on-screen guidance, text and screen captures that reference Zapier on-screen prompts are in English.

1. Select a topic. Before Zapping, check your topic to make sure that it:
   - Meets the criteria of the filter you set up (if you set up one).
   
   For example, for a Zap with a filter that states only run the Zap if the topic has a priority that is less than 3, your selected topic must have a Priority marker of 1 or 2 or you will get a Zapier error message.
Includes all the topic information that has been "matched" to target fields in the Action app.
Suppose you have created a Zap for Trello that creates a new board with the following map data associated with the board's three fields: Organization, Name, and Description.

Before you use this Zap with a topic, ensure that the topic has:

- Topic Text that will name the new board
- Resources indicated
- A start and due date for the topic
- Notes (even if blank)
- A link
If the topic does not include the items selected during setup, you will receive a Zapier error.

**READ HINT**

If you want to use a Zap that does not meet all criteria, you can go into the Zapier dashboard and edit the filter.

2. Do **one** of the following:

| On the **Tasks** tab, in the **Send Tasks To** group, click the **Zapier** drop down then click **Send Selected Topics to Zapier.** | Or | On the **Advanced** tab, in the **Zapier** group, click the **Zapier** drop down then click **Send Selected Topics to Zapier.** |

If your zap is successful, you will receive a confirmation message, and the Zapier icon ✴️ is displayed on the topic. Hovering over the topic will open a tool tip indicating the Zapier status, and the topic will also be listed Under **Sent to Zapier** in the Elements tab on the Map Index.

**READ HINT**

Zapier icons are not listed in the Marker Index, and do not work with filters.

If your Zap is **not** successful, you will receive an error message and your topic will display the Zapier error icon ⚠️. Hovering over the topic will display an error tool tip; the topic will also be listed Under **Sent to Zapier** in the Elements tab on the Map Index with an error icon.

**NOTE:** Data sent using Zapier is not synced to the map. If you make changes on your map, it will not be updated in the Action app. You must re-send the Zap to update the information.

**Re-Zapping Topics**

If you have already Zapped a topic, and you choose to Zap it again, you will receive a message warning you that re-Zapping may create duplicate information. You can choose to send anyway, or cancel.

**Show/hide Zapier Icons**

After you send a topic to Zapier, the topic displays a Zapier icon. You can turn this feature on or off by clicking **Show Zapier Icons in Map** in the **Zapier** drop-down menu.
1. Do **one** of the following:

   - **On the Tasks tab, in the Send Tasks To group, click the Zapier drop down then click Show Zapier Icons in Map.**
   - **On the Advanced tab, in the Zapier group, click the Zapier drop down then click Show Zapier Icons in Map.**

   Or

   - **On the Tasks tab, in the Send Tasks To group, click the Zapier drop down then click Show Zapier Icons in Map.**
   - **On the Advanced tab, in the Zapier group, click the Zapier drop down then click Show Zapier Icons in Map.**

If you uncheck this option, the Zapier icon will not be displayed on topics that have been sent to Zapier. However, Zapped topics will be listed in the Map Index’s Elements tab.

!!! **READ NOTE**

Zapier icons are not listed in the Marker Index, and do not work with filters.

**Zapier History**

Select **View Zapier History** from the Zapier drop-down to open the Map Index’s Elements tab to see a list of all topics that have been sent to Zapier.

**To remove Zapier History from a selected topic**

1. Select the topic(s) where you want to remove Zapier history.
2. Right click the Zapier icon in the topic and in the context menu, click **Remove Zapier History from This Topic.**

The Zapier icon is removed from the selected topic(s) and those topics are deleted from the Elements tab in the Map Index.

**To remove Zapier History from the entire map**

Do **one** of the following:

   - **Right click the topic and in the context menu, click Remove Zapier History from Map.**
   - **On the Tasks tab, in the Send Tasks To group, click the Zapier drop down then click Remove Zapier History from Map.**
   - **On the Advanced tab, in the Zapier group, click the Zapier drop down then click Remove Zapier History from Map.**

The icon is removed from all topic(s) and all topics are deleted from the Elements tab in the Map Index.

!!! **READ HINT**

You can use **Remove Zapier History from This Topic** or **Remove Zapier History from Map** to eliminate Zapier error icons.
**Sign Out**

To sign out of your MindManager account:

1. In the Zapier drop-down menu, click **Sign Out**. Once you are signed out, you cannot send Zaps.

To sign into your MindManager account:

1. In the Zapier drop-down menu, click **Set Up Account**. In the Account setup window, select **Sign In**, and enter your credentials (username and password.).

---

### Receive map data using Zapier

Once you have set up Zapier, you can start using your Zap to receive topic data in MindManager from the Zap-enabled application(s) in your Zapier account.

**READ HINT**

If you need help, check out "How to Use Zapier" in the Zapier Learning Center or search the Zapier Help Center for common topics and guidance on connecting specific applications.

To access the most current information on MindManager's Zapier integration, be sure to enable online help.

**NOTE:** Data received using Zapier is not synced to the map. If you make changes to your Trigger app, they will not appear automatically on your map. You must run the Zap again to update the information.

### Receive map data in topics from Zapier

For a topic to receive map data using Zapier, you must first set up Zapier, register the topic with the service, and then create a Zap.

---

### Receive a Zap

**NOTE:** Zapier is not currently localized. To provide accurate on-screen guidance, text and screen captures that reference Zapier on-screen prompts are in English.

1. Do one of the following:
   - **On** the **Task** tab, in the **Send Tasks To** group, click the **Zapier** drop down and select **Make Receiving Topic**.
   - **Or** on the **Advanced** tab, in the **Zapier** group, click the **Zapier** drop down and select **Make Receiving Topic**.
2. When your topic's registration with the server is successful, the Zapier receiver button 🌟 is attached to the topic, and a confirmation dialog gives you instructions on how to create a Zap.

3. Click the **Don't show this again** checkbox to prevent this dialog from popping up every time you make a new receiving topic.

   ![READ NOTE]
   
   If there is a problem contacting the server, you receive an error message letting you know that your receiving topic could not be made and inviting you to try again.

4. In your Zapier account online, create a Zap using MindManager as the Action app and your topic as the Parent Topic.

5. On your map, click the topic's Zapier button and select **Receive Zaps for This Topic**. A progress dialog pops up to confirm receipt from Zapier, and success of the operation.

6. Subtopics are added to the map with the information from Zapier, marked with a **Received from Zapier** icon, and listed in the corresponding group in the Elements tab of the Map Index.

   ![READ HINT]
   
   Hovering over the topic's Zapier button displays a status tooltip.

   **NOTE:** Data received using Zapier is not synced to the map. If you make changes to your Trigger app, they will not appear automatically on your map. You must run the Zap again to update the information.

**Remove the receiver**

To remove the ability of your parent topic to receive information from Zapier, click the Zapier button and select **Remove Receiver**.

Your topic converts back to a regular topic, its button is removed, and it can no longer receive Zaps.

**Show/hide Zapier Icons**

When your topic has received data from Zapier, it is marked with a Zapier-receiving icon displaying a Zapier logo with a superimposed green down arrow. You can turn this feature on or off by clicking **Show Zapier Icons in Map** in the Zapier drop-down menu.

Do one of the following:

- On the **Tasks** tab, in the **Send Tasks To** group, click the **Zapier** drop down then click **Show Zapier Icons in Map**.
- **OR**
- On the **Advanced** tab, in the Zapier group, click the **Zapier** drop down then click **Show Zapier Icons in Map**.

If you uncheck this option, the Zapier icon will not be displayed on topics that have received Zaps. However, Zapped topics will be listed in the Map Index's Elements tab.

![READ NOTE]
Zapier icons are not listed in the Marker Index, and do not work with filters.

**Zapier History**

Select **View Zapier History** from the **Zapier** drop-down to open the Map Index’s Elements tab to see a list of all topics that have received Zaps.

**To remove Zapier History from a selected topic**

1. Select the topic(s) where you want to remove Zapier history.
2. Right click the Zapier icon in the topic and in the context menu, click **Remove Zapier History from This Topic**.

The Zapier icon is removed from the selected topic(s) and those topics are deleted from the Elements tab in the Map Index.

**To remove Zapier History from the entire map**

1. Do one of the following:

   - Right click the topic and in the context menu, click **Remove Zapier History from Map**.  

   - On the **Tasks** tab, in the **Send Tasks To** group, click the **Zapier** drop down then click **Remove Zapier History from Map**.  

   - Or

   - On the **Advanced** tab, in the **Zapier** group, click the **Zapier** drop down then click **Remove Zapier History from Map**.

The icon is removed from all topic(s) and all topics are deleted from the Elements tab in the Map Index.

---

You can use **Remove Zapier History from This Topic** or **Remove Zapier History from Map** to eliminate Zapier error icons.

---

**Sign Out**

To sign out of your MindManager account:

- In the Zapier drop-down menu, click **Sign Out**. Once you are signed out, you cannot receive Zaps.

To sign into your MindManager account:

- In the Zapier drop-down menu, click **Set Up Account**. In the Account setup window, select **Sign In**, and enter your credentials (username and password.).
Incorporate data, Microsoft Office, or SharePoint

Adding Topic data

Spreadsheets

MindManager's spreadsheet feature provides a method for including topic-specific numeric data. It uses a standard interface similar to other spreadsheets you have used, and provides basic spreadsheet functions and the ability to display the data as a chart.

The spreadsheet can be sized and displayed or hidden. The data can be shown in spreadsheet form (a data table) or, in chart form (graphical representation).

**READ HINT**

If you already have data entered in Excel, you can link to the Excel data.

---

Insert a spreadsheet

1. Select the topic(s). On the Advanced tab, in the Topic Data group, click Spreadsheet.
   
   An empty spreadsheet will appear on the topic(s).

2. To enter spreadsheet data you must start the spreadsheet edit mode. Do one of the following:

   - Right-click the topic's Spreadsheet icon , then click Edit Spreadsheet.
   - OR Select the topic then double-click on the spreadsheet.

Once the edit mode is started you'll see a toolbar with buttons for the spreadsheet commands, and OK or Cancel options for ending the edit mode. In edit mode you can type in the data, or paste it from another application.

**READ HINT**

You can paste data from another spreadsheet, or from a document that has data values separated by tabs.
To see more rows or columns select the spreadsheet and enlarge it by dragging the bottom or right margins.

**Show or hide the spreadsheet**

- Click the topic's show or hide button.

**Remove the spreadsheet from the topic**

- Right-click the Spreadsheet topic icon , then click Remove Spreadsheet from Topic.

**Format and customize the spreadsheet**

Once the data is entered, you can go on to rearrange and format it to suit your needs. The spreadsheet functions are based on standard spreadsheet conventions so they will be familiar to you. Options to further customize the spreadsheet, you can set the spreadsheet properties. Right-click on the topic's spreadsheet icon, and click Spreadsheet Properties.

After you've entered and formatted the spreadsheet data you can choose to display only the data, or, if you prefer to show a graphical representation of that data, you can create a chart.

**View the spreadsheet as a chart**

1. **Optional** If you are not already in spreadsheet edit mode do one of the following:
   - Right-click the topic's Spreadsheet icon and click **Edit Spreadsheet**
   - Select the topic then double-click the spreadsheet.

2. Click **Chart View**.

3. To select the chart's data range enter the range limits, or click and drag to select the data, then press **Enter**.

4. You'll see a default chart displayed. Click **Chart Properties** to customize the chart to your liking. Some options can be set directly using the Chart toolbar buttons, or, right-click the chart, and then click **Properties** for the full set of options.

**Switch between chart view and spreadsheet view**

1. **Optional** If you are not already in spreadsheet edit mode do one of the following:
   - Right-click the topic's Spreadsheet icon , and then click **Edit Spreadsheet**
   - Select the topic then double-click the spreadsheet.

2. Choose the view to display:
   - Click the spreadsheet toolbar's **Chart View** button to see the chart.
   - Click the spreadsheet toolbar's **Spreadsheet View** button to see the spreadsheet.
One way to include data in a map is by adding properties sets to your topics. A topic properties set is an object included within a topic that contains a list of property names and their values. You can create and re-use topic properties sets to standardize the entry of data for topics of a specific type. For example you could create a topic properties set with fields for standard employee data such as department, manager, title, employee number, etc.

Within the set, you can classify some properties as Hidden. Hidden properties are not shown, by default, but you can choose to display them.

Creating a topic properties set involves two steps:

A. Define a list of properties of various data types.
   At this point, you have a list of properties without values ready for data entry. If you'd like to use this list of properties for other topics you can duplicate it by copying the topic or by creating a Map Part.

B. Edit the topic properties to populate the fields with data specific to this topic.

Once the topic properties set has been created you can choose to show or hide it, and if it's no longer needed, you can remove it from the topic.

You can also calculate a topic property based on the values of other properties used on the map. See Use Formulas to learn more.

READ HINT

The Map Index task pane Elements list displays all the topics on your map that contain topic properties.
**Define a list of topic properties**

1. Select a topic.
2. On the **Advanced** tab, in the **Topic Data** group, click the **Properties** icon.
3. Click **Define Topic Properties**.
   - The placeholder "Property" appears as the first entry in the properties list
4. In the **Name** field, enter the name for the property.
   - **READ NOTE**
     - Topic properties must have unique names. You will not be permitted to enter a property name if it is already used in the topic.
5. Choose its data **Type** and **options**. The data type and options you choose will determine how the property's data is displayed and what type of data entry field is used. (See **Use Formulas** for information on Calculated properties.)
   - **READ HINT**
     - The **Hidden** checkbox determines whether this data is shown by default. If checked, the property is only shown when you choose to view Hidden properties.
6. To define another property, click **New**, then repeat steps 3 and 4.
   - Continue until you have added all the properties you want.
7. Click **OK** to exit the dialog.
   - **READ HINT**
     - If you want to re-use this set of properties for other topics, you can duplicate this topic before entering the data. You can either copy the topic or, if you plan to use it frequently, create a **Map Part** from it.

**Enter data for topic properties**

1. Select the topic where you have defined the properties, then do one of the following:
   - Click any property value in the topic properties set.
   - Or
   - Right-click the topic **Properties** icon, then click **Edit Topic Properties**.
   - Or
   - Select the properties set, then press F2.
2. Enter the data for the properties. The data entry is controlled by the property's data format and options. If you have entered data that is not valid for the property type, the **OK** button will be disabled.
   - **READ HINT**
     - To see more properties, select the properties list and drag the corner handles.
3. When you are finished entering the data click **OK**.
Incorporate data, Microsoft Office, or SharePoint

View and modify topic properties

View the topic properties

- Click the show ▼ or hide ▲ button on the topic.
- To see more or fewer properties, click the properties box and drag to resize it.

**READ HINT**

Right-click the topic's Properties icon ▶ to enable Auto-Fit - this will automatically size the box to show all properties.

Show hidden properties

- Right-click the topic's Properties icon ▶, then click Show Hidden Topic Properties.

Enter or edit property values

Do one of the following to switch to Property value editing mode, then enter new values:

Right-click the topic's Properties icon ▶ or right-click the topic's property list, and then click Edit Topic Properties.

Or

Double-click a property value displayed on the topic.

Or

On the Advanced tab, in the Topic Data group, click the Properties icon ▶, and then click Edit Topic Properties.

**READ NOTE**

You cannot directly edit the value of a property that is calculated from other properties (indicated by ▼ next to the value).

Modify property names and definitions

Do one of the following to switch to Property definition mode:

Double-click a property name displayed on the topic.

OR

Right-click the topic's Properties icon ▶ or right-click the topic's properties list, and then click Define Topic Properties.

**READ HINT**

You can change the numeric property types (Number, Currency, Percentage, or Integer) to any one of the other three without deleting any data that has already been entered into the property.

Changing between a numeric property type and a non-numeric one will result in the loss of any data that has been entered in the property.
Topic properties must have unique names. You will not be permitted to enter a property name if it is already used in the topic.

If you rename a property that is used in a formula to calculate another property, the formula is not automatically updated to use the new property name. You must update the formula with the new name, or the property will not be used.

You can rename a property that is calculated by a formula in the Define Topic Properties dialog, or in the Formula Builder or Formula Editor.

If you un-check the Calculated option for a property calculated by a formula, the formula is removed from the topic, and the property assumes its current value which becomes static.

Remove topic properties or values from a topic
- To remove all properties and their values, right-click the topic's Properties icon , then click Remove All Topic Properties.
- To remove a single property and its value, right-click the property in the displayed properties, and then click Remove Topic Property. *
- To remove only the value for a property, right-click the property in the displayed properties, and then click Clear Topic Property Value. *

* To perform this operation on multiple properties, CTRL+click the properties you want to select first.

Copy and paste topic properties
You can copy and paste a property value, a property name, or both the property name and value.
- To copy only the property value, right-click the value on the topic, and then click Copy Topic Property Value. To paste the value anywhere, press Ctrl+V.
- To copy both the name and value, right-click the topic property on the topic, and then click Copy Topic Property. To paste the copied properties, select a topic, and on the Home tab, click Paste, Paste Topic Properties.
- You can also paste the copied properties or values anywhere as text using the basic Paste (Ctrl+V) command.

You can also copy properties from one topic to another using drag and drop.
- Select the topic property and drag it to a new topic.
- To drag and drop more than one property, press CTRL as you select the properties, then drag and drop to the new topic.
Use formulas

Formulas let you calculate the value of a topic property by evaluating an expression that uses other topic properties from specific topics, task attributes, or a range of topics on your map. The properties used in the calculation are called input properties, and the resulting property is called a calculated property. Any topic on your map can contain one or more formulas to define one or more calculated properties.

Calculated properties are updated dynamically, so their values are automatically updated as you add or edit the input properties, or move, add or remove their topics.

Formulas can use input properties whose type is number, currency, integer, percentage or calculated.

Read Note

If you used AutoCalc in an earlier version of MindManager, a formula is created for each calculated property you defined. If you edit these formulas in MindManager 14, they will not be supported in earlier versions of MindManager.

What is a formula?

Example of a simple formulas are:

\[ \text{[unit_cost]} = 22 + 3 \]

Meaning: the "unit_cost" topic property is equal to 22 plus 3.

\[ \text{[unit_price]} = \text{[unit_cost]} \times 1.25 \]

Meaning: the "unit_price" topic property for this topic equals the "unit_cost" property times 1.25.

\[ \text{[product_profit]} = (\text{[unit_price]} - \text{[unit_cost]}) \times \text{[units]} \]

Meaning: the "product_profit" topic property equals the "unit_price" property minus the "unit_cost" property times the number of units.

You can use topics anywhere on the map in the calculation, by using a formula like this:

\[ \text{[total_profit]} = \text{SUM (MapTopics [product_profit])} \]

Meaning: the "total_profit" topic property for this topic equals the sum of the "product_profit" properties of all topics in all map topics.

You can also create more complex calculations that can evaluate a range of topics anywhere on the map and include only specific topics or topic types.
An example of a more sophisticated formula that you can create in the Formula Editor is:

\[
\text{[total\_budget\_surplus]} = \text{SUM(MapTopics[budget]) - SUM(MapTopics[travel\_expense],MapTopics[equipment\_expense],MapTopics[salaries],\text{topic[operations\_expense]})}
\]

Meaning: the "total\_budget\_surplus" topic property for this topic equals the sum of the "budget" property on all map topics, minus the sum of the "travel\_expense", "equipment\_expense", and "salaries" properties on all map topics, and the "operations\_expense" property on a specific map topic.

How do I create formulas?

Use the buttons on the Advanced tab to enter formulas: AutoCalc provides an interface for easy formula creation, or click Formulas to use the Formula Editor to create or edit more complex formulas.

The choice of decimal separators (period or comma) and list separators (comma or semicolon) is determined by the Windows Control Panel Region and Language settings for your computer.

Create a simple formula with AutoCalc

Autocalc lets you create simple formulas that include a single function, one input property, and one range.

To create more sophisticated formulas, use the Formula Editor:

1. Select a topic on the map.
2. On the ribbon's Advanced tab, click AutoCalc.
3. In the dialog, select:
   - The calculated property to be created on this topic by the formula.
   - The Function to use in the calculation.
   - The input property used by the function.
   - The topic range to evaluate.
4. Select the checkbox to add the input property to topics that are used in the calculation but do not already contain this property. Select the property type for these properties. (Use this option if you expect all the topics used in the calculation to contain the input property - you can fill in the input property values at any time. If the input property is not present on a topic, that topic is ignored by the calculation)
5. Click OK.

Once you have created the formula, the topic will display a formula icon \(\text{\(\hat{f}\)}\). You can see a list of the topic's formulas by pointing to this icon.

If you want to change the formula you created, you can edit it in the Formula Editor.
Create a formula with the Formula Editor

The Formula Editor lets you create sophisticated formulas that include multiple functions (with grouping for precedence), input properties, and ranges.

1. Select a topic on the map.
2. On the ribbon's Advanced tab click Formulas.
3. The Formula Bar appears, and shows all the formulas contained on the selected topic.
4. Click + to open the Formula Editor and enter the new formula.
5. On the Formula Editor Insert bar, click \( \text{topic}\) to choose the topic property you want to define by the calculation (this is the formula's left-hand side). If you choose Other, enter the name for the new property between the brackets that appear \([\ ]\).
6. Click to the right of the = and type the formula. For speedier entry, you can use the Insert bar buttons to choose functions \(\Sigma\), ranges \(\square\), task attributes \(\text{controller}\), or select specific map topics \(\text{location}\) to use in the calculation.

See Formula elements and syntax in this topic for details.

7. Click \(\checkmark\) to validate the formula. Errors will appear on the Formula Editor status bar.

To cancel changes you made using the Formula Editor, click \(\times\). You can close the Formula Editor by pressing \(\text{Esc}\).

Once you have created the formula, the topic will display a formula icon \(\mathcal{F}\).  

\(\checkmark\) READ HINT

You can duplicate the formula on other topics by copying the property that it calculates.

You can see all the topics that contain formulas on the Map Index Elements tab.

\(\checkmark\) READ HINT

Edit or remove a formula

1. Select the topic that contains the formula you want to change or delete.
2. If the Formula Bar is not displayed, on the ribbon's Advanced tab click Formulas, or click the formula icon \(\mathcal{F}\) on the topic.
3. On the Formula Bar select the formula you want to edit or remove. The Formula Editor starts.
4. To edit the formula, modify the formula text manually or by using the Formula Editor buttons to specify Topic Properties \(\text{controller}\), Functions \(\Sigma\), Ranges \(\square\), Task attributes \(\text{controller}\), and to
To remove the formula, click \( \text{Formula Editor} \). You can close the Formula Editor by pressing \( \text{Esc} \).

You can also remove a formula from a topic by deleting the topic property that it defines.

Include hidden topics in formulas

By default, hidden topics are excluded from calculations. However, you can modify map settings to include topics hidden by filters.

1. Do one of the following:
   - On the \( \text{File} \) tab, click \( \text{Info} \), and then click \( \text{Map Settings} \).
   - Right-click the map’s workbook tab, and choose \( \text{Map Settings} \).

2. Disable the \( \text{Recalculate formulas when there are topics are hidden by filters} \) check box.

Formula elements and syntax

General form

The general form for a formula is: \( \text{lhs} = \text{rhs} \)

\( \text{lhs} \) (left-hand side) specifies the calculated topic property to be defined by this formula. It will receive the results of the \( \text{rhs} \) (right-hand side).

\( \text{rhs} \) (right-hand side) is an expression that is evaluated to produce a numeric value. This value is assigned to the calculated topic property specified by \( \text{lhs} \).

This expression usually acts on a range of topics and / or on specific topics.

Topic properties

In the Formula Editor, click \( \text{topic property} \) to insert a topic property in the equation. On the \( \text{lhs} \), you can select only properties in the current topic or create a new property. On the \( \text{rhs} \), you can select any property used in the map.

Topic properties are always enclosed in square brackets \( [ \ ] \).

Examples: \([\text{cost}] [\text{unit_cost}] [\text{all costs}]\)

Topic properties used in formula calculations must be of one of the following numeric types:

- Number
- Currency
- Percentage
- Integer
• Calculated (a property whose value is determined by another formula)

**Read Hint**
You can change the numeric property types (Number, Currency, Percentage, or Integer) to any one of the other three without deleting any data that has already been entered into the property.

**Operators and numbers**

<table>
<thead>
<tr>
<th>Operator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>+</td>
<td>addition</td>
</tr>
<tr>
<td>-</td>
<td>subtraction</td>
</tr>
<tr>
<td>*</td>
<td>multiplication</td>
</tr>
<tr>
<td>/</td>
<td>division</td>
</tr>
<tr>
<td>^</td>
<td>exponentiation</td>
</tr>
<tr>
<td>( )</td>
<td>grouping for precedence and enclose function arguments</td>
</tr>
</tbody>
</table>

You can use numbers in equations and group operations with parentheses.

**Example:**

\[
[\text{Total}] = 3 \times (5+2) + 10 \times (2+2)
\]

\[
[\text{Weighted\_Profit}] = 3 \times [\text{Profit}] - (2 \times ([\text{Cost}] / 15))
\]

**Topic ranges or selection**

Topic ranges are used in the formula's right-hand side to specify a set of topics to use in the calculation. You can specify the range by clicking in the Formula Editor, or by typing the keywords below. To refer to specific topics, click and then select the topic in the map. If you do not specify a range for a property the calculation uses that property from the current topic. This is displayed in the formula as topic. You can see the name of the map topic by pointing to this text in the Formula Editor, or double-click it to navigate to the topic it references.

**Read Note**
If you use a range that contains topics hidden by a filter, the properties on those topics are ignored during the formula calculation. If you reference a specific topic, its properties are always included in the calculation even if the topic is hidden.

<table>
<thead>
<tr>
<th>Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self</td>
<td>this topic; implicit, if range is not otherwise specified</td>
</tr>
<tr>
<td>Parent</td>
<td>parent of this topic; evaluates to nothing for the Central Topic</td>
</tr>
<tr>
<td>Branch</td>
<td>this topic and all its descendants</td>
</tr>
<tr>
<td>Children</td>
<td>the immediate subtopics (1 level) of this topic</td>
</tr>
</tbody>
</table>
### Descendants
all subtopics (multiple levels) of this topic

### Siblings
all other topics that have the same parent as this topic (not including this topic)

### Ancestors
all topics (multiple levels) from which this topic descends, not including this topic

### CentralTopic
the map's central topic

### MapTopics
all topics in the map, including callouts and floating topics

### Callouts
callouts on this topic; does not include callouts on boundaries and relationships

### Floating
all floating topics in map, not including their descendants

### Range Examples

- `[cost] - "The cost property of this topic." (No range is specified, so "self" is implied.)
- `Siblings [cost] - "The cost property of the siblings of this topic."
- `topic [cost] - "The cost property of the topic that was selected." (Point to topic to see the name of the topic referenced.)

### Task attributes

Task attributes can be used in the formula's right-hand side. You can insert a task attribute by clicking ![Task] in the Formula Editor, or by typing the keywords below.

**Effort**
the amount of actual work time required to complete a task
when used, the default time unit is hours

**EffortHours**
the amount of actual work time required to complete a task measured in hours

**EffortDays**
the amount of actual work time required to complete a task measured in days
Incorporate data, Microsoft Office, or SharePoint

<table>
<thead>
<tr>
<th><strong>Duration</strong></th>
<th>the span of time during which the task will be completed when used, the default time unit is hours</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DurationDays</strong></td>
<td>the span of time during which the task will be completed measured in days</td>
</tr>
<tr>
<td><strong>DurationHours</strong></td>
<td>the span of time during which the task will be completed measured in hours</td>
</tr>
<tr>
<td><strong>Progress</strong></td>
<td>the amount of work completed on a task, expressed as a percentage</td>
</tr>
<tr>
<td><strong>Priority</strong></td>
<td>the priority level assigned to the task</td>
</tr>
<tr>
<td><strong>GeneralCost</strong></td>
<td>a fixed amount associated with the task</td>
</tr>
<tr>
<td><strong>TotalResourceCost</strong></td>
<td>an amount associated with a task based on the amount of effort of a resource and the resource's rate</td>
</tr>
<tr>
<td><strong>TotalCost</strong></td>
<td>all costs associated with a task</td>
</tr>
</tbody>
</table>

Function arguments are enclosed in parentheses. Unlike topic properties, task attributes must not be enclosed in square brackets.

**Example:** `[Resource Average cost] = AVERAGE (MapTopics.TotalResourceCost)`
**Meaning:** the "Resource Average cost" topic property for this topic equals the AVERAGE of the "TotalResourceCost" task attribute of all topics in all Map Topics.

**Built-in functions**

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUM</td>
<td>The sum of the property values.</td>
</tr>
<tr>
<td>AVERAGE</td>
<td>The sum of the property values divided by the number of properties.</td>
</tr>
<tr>
<td>COUNT</td>
<td>The number of properties.</td>
</tr>
<tr>
<td>MIN</td>
<td>The smallest value of the property within the range.</td>
</tr>
<tr>
<td>MAX</td>
<td>The largest value of the property within the range.</td>
</tr>
</tbody>
</table>

Function arguments are enclosed in parentheses.

**Example:** `[Total_cost] = SUM (Descendants [cost])`

Multiple arguments are separated by , (commas).

**Examples:**

```
[Project_expense] = SUM ([travel_expense], [equipment_expense], [salaries])
[Total_expense] = SUM (MapTopics[Project_expense], topic[Operations_expense])
```
You can make data in topics more identifiable by changing how topic data is displayed when it meets criteria set in SmartRules. You first select a trigger, which is the criteria that must be met for the SmartRule to be applied. Next, you choose the effect to be applied if the trigger criteria is met. You can apply SmartRules to all topics in a map or only to ones that you specify.

You can have multiple SmartRules. The order in which the rules are applied is based on their priority, which you can modify. The number next to the rule in the SmartRules dialog defines its priority and controls the order in which rule effects are applied. The rule with a higher priority always has its effects applied in the event that more than one rule is trying to apply an effect to the same attribute. For example, if rule 1 and rule 2 apply different fill colors to a topic, the color specified by rule 1 is used.

You can also choose whether a SmartRule effect can be manually overridden by other input. You can save a SmartRule to the library for reuse in new maps. By default, hidden topics are excluded from
SmartRules. However, you can modify map settings to include topics hidden by filters.
In previous versions of MindManager, this feature was called **Conditional Formatting**.

### Add a SmartRule

1. On the **Advanced** tab, in the **Dashboards** group, click the **SmartRules** arrow, and then click **Add Rule**.
2. Type a name for the rule in the **Rule Title** box.
   By default, the rule is applied to all topics in the map. If you want to apply the rule only to specific topics, click **Advanced Options**, enable the **Specific Topics** option, click **Select Topic**, and choose the topics in the Select Topic dialog box, and click **OK**. These selected topics are locked for "Topic Belongs to Branch" trigger.
3. Open the **Triggers** drop-down, and choose one of the following:
   - **Icons**, and then choose an icon from the **Select Icon** drop-down.
     If you want to display topics to which no icons have been added, choose **Doesn't exist**.
   - **Number of Attachments**, and then choose an operator and number of attachments.
   - **Number of Links**, and then choose an operator and number of links.
   - **Number of Subtopics**, and then choose an operator and number of subtopics.
   - **Part of Task Info Roll-up Branch**, and then choose operators.
   - **Resources**, and then choose an operator and the text to match in the resource.
     If you want to display topics to which no resources have been assigned, choose **Doesn't exist**.
   - **Tags**, and then choose an operator and the text to match in the tag.
     If you want to display topics to which no tags have been assigned, choose **Doesn't exist**.
   - **Task At-Risk**, and then choose operators.
   - **Task Cost - General**, **Task Cost - Resource**, or **Task Cost - Total**, and then choose an operator and a cost amount.
   - **Task Start Date** or **Task Due Date**, and then choose an operator and a date.
     If you want to display topics to which no start or due dates have been assigned, choose **Doesn't exist**.
   - **Task Effort** or **Task Duration**, and then choose an operator and a time increment.
   - **Task Milestone**, and then choose an operator.
   - **Task Priority**, and then choose an operator and a priority level.
     If you want to display topics to which no priority levels have been assigned, choose **Doesn't exist**.
   - **Task Progress**, and then choose an operator and a progress level.
• **Topic Belongs to Branch**, and then choose an operator and a branch.
• **Topic Location**, and choose an operator, and then choose an object in the map.
• **Task Notes**, and then choose an operator and the text to match in the topic.
• **Topic Text**, and then choose an operator and the text to match in the topic.
• **Topic Style**, and then choose an operator and the topic style to match.

The map must contain a topic style for this option to be available.

A rule can have multiple triggers. To add another trigger, click **Add New Trigger**, and set the trigger criteria. You can choose to apply the SmartRule when the criteria for one trigger or for all triggers is met.

4. Open the **Effects** drop-down, and choose any of the following effects that you can apply to text in a topic or subtopic:
   - **Font Bold**
   - **Font Color**
   - **Font Italic**
   - **Font Size**
   - **Font Strikethrough**
   - **Font Underline**

5. Open the **Effects** drop-down, and choose any of the following effects that you can apply to a topic or subtopic:
   - **Fill Color**
   - **Line Color**
   - **Topic Shape**

You can use multiple effects for the same trigger. To add an effect, click **New Effect**, and choose effect settings.

**Add a SmartRule to specific topics**

Do one of the following:

- Click the **SmartRules** arrow, click **Add Rule**, set the rule criteria, enable the **Specific Topics** option, click **Select Topics**, and choose the topics in the Select Topic dialog box, and click **OK**.
- Select the topics to which you want rules applied, click the **SmartRules** arrow, click **Add Rule for Selected Topics**, set the rule criteria, and click **OK**.

**Edit a SmartRule**

1. On the **Advanced** tab, in the **Dashboards** group, click the **SmartRules** arrow, and then click **Edit Rule**.
2. In the SmartRules dialog, select the rule to edit.
3. Click **Edit**.
4. In the Edit Rule dialog, modify the rule settings.

Override a SmartRule

1. On the **Advanced** tab, in the **Dashboards** group, click **SmartRules**, and then click **Edit Rule**.
2. In the SmartRules dialog, select the rule to override, and then click **Edit**.
3. In the Edit Rule dialog, enable the **Allow Manual Override for Effects** check box, and click **OK**.

Delete a SmartRule

1. On the **Advanced** tab, in the **Dashboards** group, click **SmartRules**.
2. In the SmartRules dialog, select the rule to delete.
3. Click **Delete**.

Modify the priority of SmartRule

1. On the **Advanced** tab, in the **Dashboards** group, click **SmartRules**.
2. In the SmartRules dialog, select a rule.
3. Click the **Up Arrow** or **Down Arrow** buttons to move the rule within the list.

Save a SmartRule to the library

1. On the **Advanced** tab, in the **Dashboards** group, click **SmartRules**.
2. In the SmartRules dialog, select the rule to save.
3. Click **Save To Library**.

Apply a SmartRule from the library

1. On the **Advanced** tab, in the **Dashboards** group, click **SmartRules**.
2. In the SmartRules dialog, click the **Add New** arrow, and click **Add From Library**.
3. In the Add From Library dialog, select the rule.
4. Click **Add**.

Disable a SmartRule

1. On the **Advanced** tab, in the **Dashboards** group, click **SmartRules**.
2. In the SmartRules dialog, select the rule to disable.
3. Click the **Enable** button. If the button is gray, the rule is disabled.
Map Roll-ups

You can roll-up topics or branches from other maps into topics in your active map. Map roll-up topics can be refreshed to show the latest updates in the original map.

Add a Map Roll-up

1. Select a topic on the map where you want to roll-up a topic from another map.
2. On the ribbon's Advanced tab, click Map Roll-up.
3. Click Insert New Map Roll-up.
4. In the Open dialog, select the map containing the topic that you want to roll-up.
5. In the Select Topic to Roll-up dialog, select the topic, and then click OK.

A Map Roll-up icon appears in the topic. If you want to include subtopics within the Roll-up, right-click the Map Roll-up icon, and click Show Topic and Branch.

Update Map Roll-ups

Do any of the following:

| Right-click a Map Roll-up, and click Refresh Map Roll-up. | Or | Right-click a Map Roll-up, and press F5. | Or | Select the topic(s) containing the Map Roll-up that you want to update, click Map Roll-up on the ribbon's Advanced tab, and then click Refresh Selected Map Roll-ups. |

Update all Map Roll-ups

1. On the ribbon's Advanced tab, click Map Roll-up.
2. Click Refresh All Map Roll-ups in Map.

READ NOTE

You can automatically refresh all map roll-ups when you open the map by clicking Map Roll-up on the ribbon's Advanced tab, and then clicking Refresh Map Roll-ups on Open.

Disconnect a Map Roll-up

- Right-click a Map Roll-up, and click Disconnect Map Roll-up.
Working with Microsoft Office

Troubleshooting Microsoft Office add-ins

MindManager provides a variety of ways to integrate data from Microsoft Office applications into your maps, or add map content to new or existing Office documents:

<table>
<thead>
<tr>
<th>Application</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Excel**   | Create an active, two-way link between an existing map topic and a range of Excel data.  
Import a Microsoft Excel (XLSX) spreadsheet into a topic in an existing map or create a new map based on the file.  
Export your entire map or only selected topics to a Microsoft Excel spreadsheet.  
Export your entire map or only selected topics to a CSV file that Excel can import. |
| **Outlook** | Query Outlook for matching items and use them to create new map topics with active links to their associated items.  
Send a map topic to Outlook to create a new Outlook item and an active two-way link between the topic and the new item.  
Send items from Outlook to a map to create new, linked map topics. |
| **PowerPoint** | Export your map's slides as a presentation with topics displayed as a bulleted text outline, or as PowerPoint objects. |
| **Project** | Import tasks from a Project file to a map.  
Send tasks from Project to create topics in a MindManager map.  
Export topics from a map to create tasks in Project. |
| **Word** | Import a Word document to a map to create new topics.  
Send content from a Word document to create topics in a MindManager map.  
Export a map (or selected topics) to Word. |

The Microsoft Office integration features are provided by add-ins that are installed when you install MindManager.

**READ NOTE**

Add-ins will only activate features in MindManager if you have the supporting program installed. For example, you will not see any commands in MindManager for using Microsoft Word if you do not have Word installed on your system.
Troubleshooting Office add-ins

Missing commands in MindManager

The Microsoft Office add-ins add entries in:

- The File tab Export and Import menus
- The File tab Save As, Save As - Save as type: list.
- The MindManager ribbon - the Tasks tab, Send Tasks To group, and the Advanced tab, Queries group.
- Topic shortcut (right-click) menu - Send to ... command.

If you do not see the command you want to use, the add-in may be disabled, and you must enable it in MindManager.

- Click the File tab, click Options, and then click Add-ins.
- Verify that the add-ins you want to use are checked.

If you do not see the add-in you want to use listed, it may not have been installed properly: Perform a repair of MindManager as detailed in our online support pages. This will attempt to re-install and re-register the add-ins in the Office programs. It is very important that all Office programs are closed at the time of installation or repairing.

In addition to having the Add-in installed, you must also have the supporting program installed on your system.

Missing commands in Office applications

The Microsoft Office add-ins add "Send to MindManager" buttons to the interfaces of the Office applications. Depending on which version of the applications you are using, you'll see these buttons either on the main toolbar, or the ribbon. If these commands are missing from the Office application you want to use, the add-in may be disabled, and you must enable it in the Office application.

⚠️ READ NOTE

The add-ins will not add buttons to applications from the 64-bit edition of Office. If you are running the 32-bit version of Office on either a 32-bit or 64-bit system, you should see buttons from the add-ins if they are enabled. Consult the Microsoft Office Help for more information on using Add-ins with Office.

Check the application's add-ins

- Office 2003 and 2007 users: Click Help - Disabled items
- Office 2010 and later users: Click the File tab, click Options, and then click Add-ins. From the Manage list, select Disabled items, and then click Go.

If you see the MindManager add-in listed, click to enable it and then restart the application. The add-in button should reappear on the ribbon.
If you do not see the MindManager add-in listed, perform a repair of MindManager as detailed in our online support section. This will attempt to re-register the add-ins in the Office programs. It is very important that all Office programs are closed at the time of installation or repairing. Additional steps for troubleshooting add-ins can be found in the Support section of our website.

---

**Work with Microsoft Excel**

The Microsoft Excel Linker allows you to create topics with spreadsheets or charts that are linked to data in Microsoft Excel.

**READ NOTE**

You must have Excel 2003 or later installed on your system to use this feature.

You can include a range of data from an Excel worksheet as an object on a map topic. A link is maintained to the Excel worksheet: any changes made to the data in Excel will be reflected in MindManager. This data can only be edited in Excel. When you begin editing the data in MindManager, Excel opens so you can edit the data there.

You can use the MindManager spreadsheet charting feature to create a chart from the data. You can also choose to show or hide the data on the map.

You can break the link to the Excel data so that the MindManager spreadsheet is independent of Excel. The data then becomes normal spreadsheet data and can be edited in MindManager.

**See also:**

- Spreadsheets
- Work with Microsoft Office

**Link to Excel data**

**View and modify the data**

**Disconnect the topic from Excel**

---

**Import from and export to Microsoft Excel**

MindManager lets you import and export Excel files:

<table>
<thead>
<tr>
<th>Import</th>
<th>To import an Excel spreadsheet into a topic in an existing map or create a new map based on the file, see Import a Microsoft file. To export your entire map or only selected topics to a Microsoft Excel spreadsheet. Export your entire map or only selected topics to a CSV file that Excel can import.</th>
<th>Export your entire map or only selected topics to a CSV file that Excel can import.</th>
</tr>
</thead>
</table>

---

**What do you want to do?**

- Link to Excel data
- View and modify the data
- Disconnect the topic from Excel

---

**READ HINT**

You can also export your entire map or only selected topics to a CSV file that Excel can import.

The **Map Index** task pane **Elements list Business Topics group displays all the linked Excel topics on your map.**
**Export**  
To export your entire map or only selected topics to a Microsoft Excel spreadsheet, see [Export to Microsoft Excel](#).
You can also export your entire map or only selected topics to a CSV file that Excel can import.

---

**Link to Excel data**

Your map can include topics that link to and display Excel data. You can establish the link to the data from either MindManager or Excel.

**Link topics to Excel data from Excel**

1. Highlight a range in the Excel worksheet.
2. Click the **Send to MindManager Map** button on the Excel ribbon.

   If MindManager is open a new topic is added to the current map as either a main topic (nothing selected) or as a subtopic of the currently selected topic. The new topic contains the worksheet data.
   
   If MindManager is not open, it opens and begins a new map with a main topic that contains the worksheet data.

   **READ NOTE**
   
   If you do not see the **Send to MindManager Map** button in Excel, see [Troubleshooting Office add-ins](#).

**Link topics to Excel data from MindManager**

1. **Optional** Select a topic. A new subtopic will be created with the data.
2. Do one of the following:
   
   **OR**
   
   On the **Advanced** tab, in the **Topic Data** group, click **Excel Range**.
   
   Click the **Map Parts** task pane tab.
   
   In the **Map Parts** task pane, under Map Parts, click **Microsoft Excel Linker**, then drag the **Range** map part to the map.

   **READ NOTE**
   
   If you do not see the **Excel Range** button on the **Advanced** tab or the **Microsoft Excel Linker** in the **Map Parts** pane, see [Troubleshooting Office add-ins](#).

3. If Excel is not open it will start and prompt you to open a worksheet. Otherwise, it displays the current worksheet.
4. You will be prompted to highlight a data range in Excel. Highlight the range and click **OK**.

**READ HINT**
You can modify the selected range later, if you wish.

5. Switch back to MindManager. You’ll see the Excel data included as a spreadsheet on a new topic.

   ✔️ READ HINT

   If only a portion of your data is shown you can re-size the spreadsheet as described below.

6. You can close Excel at any time. You will be prompted to save the worksheet to save the MindManager links.

   ! READ NOTE

   MindManager does not support Excel formulas.

---

**View and modify the data**

**Resize the spreadsheet**

Initially, you may only see a portion of your data. To see all the data, you can resize the spreadsheet.

1. Select the topic then click again to select the spreadsheet.
2. Use the corner handles to resize the data area.

   ✔️ READ HINT

   MindManager displays the data as shown in the spreadsheet - its formatting, row height, and column widths are determined there.

---

**Modify the selected range**

1. Right-click the topic’s Microsoft Excel icon.
2. Click **Update Microsoft Excel Range**.
3. Excel will open and prompt you for the new range.

---

**Edit the worksheet data**

When you link to worksheet data in Excel, you can edit the data in one of the following ways.

**Edit the worksheet directly in Excel, then update the data in MindManager**

1. Open and edit the worksheet as you normally would in Excel, and save it.
2. In MindManager, right-click the Excel topic and click **Refresh**.

   ✔️ READ HINT

   To refresh multiple topics with Excel links right-click the map background, and then click **Refresh All Topics** or press SHIFT+F5.

---

Start the editing process from within MindManager.
1. Double-click on the spreadsheet on the topic.
2. The spreadsheet will open in Excel. Switch to Excel and edit the data, then save the worksheet.
3. In MindManager, right-click the Excel topic and click Refresh.

**View the data as a chart**
1. Right-click on the Excel topic icon and click Chart View.
2. Highlight the data range for the chart in the topic spreadsheet.

**Change the look of the chart**

- Right-click on the Excel topic icon and click Chart Properties.

Some options can be set directly using the Chart toolbar buttons, or, right-click on the chart and select Properties for the full set of options.

**Disconnect the topic from Excel**

You can disconnect the map spreadsheet from Excel - this breaks the link but the data remains in the map as a MindManager spreadsheet. Changes to the data in MindManager will no longer affect the Excel spreadsheet and vice-versa.

1. Right-click the Microsoft Excel icon on the topic.
2. Click Disconnect from Microsoft Excel.

The data is retained in the map as a spreadsheet.
Work with Microsoft Outlook

Maps can contain topics that are linked to and synchronized with their Outlook counterparts. These are called linked Outlook item topics. You can then edit the associated Outlook items directly from within MindManager by editing the linked topic - your changes are synced to the Outlook item. Likewise if the item is edited in Outlook, those changes are synced to the map, and the topic will change.

⚠️ READ NOTE

You must have Outlook 2003 or later installed on your system to use these features.

Linked Outlook item topics show special icons that indicate the type of item they are linked to:

- Task
- Contact
- Note
- Mail
- Appointment

There are several ways to add linked Outlook item topics to your maps:

- Conduct an Outlook query in MindManager to find Outlook items that match criteria you specify and then:
  - Add the query and its results to your map
  - Add select items from the query results to your map
  - Send a topic from your map to create an Outlook task or appointment
  - Send items or folders from Outlook to create linked Outlook item topics on your map
  - Drag an Outlook item into your map.

✔️ READ HINT

You can also create Outlook appointments by creating reminders on topics using MindManager’s Topic Alert feature. When you create a reminder, a corresponding Outlook appointment is automatically created. Topic Alerts are kept in sync and can be edited from either application.

The Map Index task pane Elements list Business Topics group displays all the topics on your map that contain Outlook queries, query results, and linked Outlook topics.

What do you want to do?

- Add an Outlook query to your map
- Add select Outlook query results to a map
- Create, edit and manage queries
- Send a topic from your map to create an Outlook task or appointment
- Send Outlook items or folders to a map
- Drag Outlook items into your map
- Edit Outlook query and linked Outlook item topics
- Sync queries and linked Outlook item topics
Add an Outlook query topic to your map

MindManager comes with a set of pre-defined Outlook queries that you can use. You can use these as-is, edit them to suit your needs, or create your own queries.

**READ NOTE**

Outlook queries are disabled for flowcharts

When you add an Outlook query topic to your map it returns all matching Outlook items as linked Outlook item subtopics. You can sync the query at any time to see updated results.

1. *Optional* Select a topic (the query will be added as a subtopic of this topic)
2. On the **Task** tab, **Send Tasks To** group or the **Advanced** tab, **Dashboards** group, click **Outlook Items**.
   **READ NOTE**
   
   If you do not see these commands, see Troubleshooting Office add-ins.

3. Click the query you want to use, or click **New Outlook Query** to design your own.
   **READ HINT**

   By default, queries that return tasks or appointments add the task assignees or appointment invitees to your map's Resources list. If you design your own query, you can disable this.

4. The Outlook query topic and its results (linked Outlook item topics) are added to your map.

You can also add a query topic from the Outlook task pane. Using this method allows you to run the query to preview its results before adding the topics to the map.

1. On the **Task** tab, **Send Tasks To** group or the **Advanced** tab, **Dashboards** group, click **Outlook Items**.
2. Click **Outlook Query Organizer**.
3. In the Outlook task pane, select the query you want to use and drag it to your map, or right-click it and then select **Add to Map**.
   Click  to run the query first, if you want to see what results it will produce before adding it to the map.
4. The Outlook query topic and its results (linked Outlook item topics) are added to your map.
   **READ HINT**

   By default, queries that return tasks or appointments add the task assignees or appointment invitees to your map's Resources list. You can disable this option by editing the query before you add the query topic to your map.

Add selected Outlook query results to your map

You can add specific items from a query you've run in the task pane to your map:
1. On the **Task** tab, **Send Tasks To** group or the **Advanced** tab, **Dashboards** group, do **one** of the following:

   - **Click Outlook Items**, then enable **Outlook Query Organizer**
   - **Or** **Click the Task Panes button** at lower-right, and select **Outlook**.

2. In the Outlook task pane, select the query you want to use and click ▶️ to run the query.

3. The query results appear in the lower section of the pane.

4. Drag any item from the results onto your map. These become linked Outlook item topics.

   **READ HINT**

   You can sort the items in the Results list by clicking on the column headers.

   To open an item in Outlook, double-click its name.

*Create, edit, and manage queries*

You work with Outlook queries by using the Outlook Queries task pane. To see this pane, do **one** of the following:

   - **On the Task tab, Send Tasks To group** or the **Advanced** tab, **Dashboards** group, **click** **Outlook Items**. **Enable Outlook Query Organizer**.
   - **Or** **Click the Task Panes button** on the bottom status bar, and then **click Outlook**.

**READ NOTE**

If you do not see these commands, see **Troubleshooting Office add-ins**.

*Change the order of queries in the list*

   - In the Outlook Queries task pane, drag query names up or down to reorder the list.

*Create a new query*

   1. In the Outlook Queries task pane, click ▶️, or right-click on an empty space in the list of queries, and then **click New Outlook Query**.
   2. Enter information for these fields.
   3. **Click OK**.

   MindManager automatically runs the query and displays the matching items in the **Results** list in the lower section of the pane so you can see if the query works as expected.

   **READ HINT**

   You can sort the items in the **Results** list by clicking on the column headers.

   To open an item in Outlook, double-click its name.
Edit an existing query

1. **Optional** If you want to create a new query from an existing query without changing the original, in the Outlook Queries task pane, right-click the query and then in the shortcut menu, click **Duplicate**.

2. In the Outlook Queries task pane, select the query you want to edit, and click **Edit Outlook Query**, or right-click the query you want to edit, and then click **Edit Outlook Query**.

3. Modify the information in these fields.

4. Click **OK**.

MindManager automatically runs the query and displays the matching items in the **Results** list in the lower section of the pane so you can see if the query works as expected.

You can also edit queries that you have already added to your map.

Delete queries

- In the Outlook Queries task pane, select the query you want to delete (press CTRL to select additional queries, or press SHIFT to select a range), and click **Delete Outlook Query**, or right-click the query and then click **Delete**.

**Read Hint**

Deleting a query does not affect queries you have already added to your map. To delete a query on the map, select it and then press DEL.

If you accidentally delete one of the default queries, you can restore it: right-click the queries list background, and then click **Restore Default Queries**.

Send a topic from your map to create an Outlook task or appointment

When you send a topic to Outlook, a new task or appointment is created in Outlook. The topic becomes a linked Outlook item topic that is synced with its corresponding Outlook item.

1. **Optional** To send multiple topics to Outlook, select them now.

2. Do one of the following:
   - Right-click on a topic, click **Send to**, and then click **Microsoft Outlook as Task** or **Microsoft Outlook as Appointment**.
   - On the ribbon's **Task tab**, click **Send Tasks To** group or the **Advanced** tab, **Dashboards** group, click **Outlook**.

**Read Note**

If you do not see these commands, see **Troubleshooting Office add-ins**.

If you send a single topic:

- A new Outlook item is created and the appropriate Outlook form pops up to let you enter the necessary item data.
• Click **Save and Close** to save the new item in Outlook.
• Click **Cancel** to cancel creating the Outlook item.

**Read Note**

Outlook 2003 and Outlook 2013 do not display the form. The new item is simply created, and the topic becomes a linked Outlook item topic.

If you send multiple topics:

• New Outlook items are created with [these default properties](#). You can then edit the items in Outlook individually to adjust their properties.

  **For Outlook appointments**
  Start =
  topic start date (if present)
  otherwise, use topic due date (if present)
  otherwise, use today
  Start time =
  current time, rounded up to closest 1/2 hour (as in Outlook)
  Duration =
  topic duration (if present)
  otherwise, 30 minutes

  **For Outlook tasks**
  Start =
  topic start date (if present)
  otherwise, no start date
  Due =
  topic due date (if present)
  otherwise, topic start date (if present)
  otherwise no due date

The topics become linked Outlook item topics that are synced with their corresponding Outlook items.

**Send Outlook items or folders to a map**

When you send items from Outlook to a map, new Outlook topics are created on the map. These topics are linked to the corresponding Outlook items.

1. Open the target map in MindManager or, if this is a new map, save it. Select a topic if you want the new Outlook item topics to become its subtopics.
2. In Outlook do **one** of the following:
Select one or more items, then click 
Send to MindManager Map 📊 on the 
ribbon. Or 
Click on a folder and then click Send 
Folder to MindManager Map 🙌 on the 
ribbon or on Standard toolbar.

⚠️ READ NOTE
If you do not see these buttons in Outlook, see Troubleshooting Office add-ins.
The Outlook items are added as Outlook topics: as subtopics below the selected topic, or as main topics 
if nothing is selected.

Drag Outlook items into your map
When you drag items from Outlook to a map, new Outlook topics are created on the map. These topics 
are linked to the corresponding Outlook items.

1. Open the target map in MindManager or, if this is a new map, save it.
2. In Outlook, select one or more items (message, note, task, appointment, or contact) and drag 
them into the map in Map view or Outline view.
   • If you drag the item(s) onto a topic, the new Outlook topics become subtopics.
   • If you drag the item(s) onto the map background, the new Outlook topics become main 
topics.

Edit Outlook query and linked Outlook item topics

Edit a query on the map
Once you have added a query to your map, you can edit it.
⚠️ READ NOTE
This only changes the map query, it does not affect the original query in the Outlook queries task pane.

1. Click the 📊 Outlook Query topic icon, and then click Edit Query.
2. Modify the information in these fields.
3. Click OK.
MindManager automatically runs the modified query and displays the new results as linked Outlook item 
subtopics.
✅ READ HINT
You can add your own subtopics to the Outlook Query results topics. These will be retained on sync, 
unless their parent is no longer included in the query results.

Edit Outlook items
When you edit an item in Outlook that is linked to a map topic, you'll see the changes on your map the 
next time you sync the item or its parent query topic.

You can also edit Outlook items directly from the map by doing one of the following:
Edit item attributes and properties on a linked Outlook item topic

You can edit linked Outlook item topics in the same way that you edit normal map topics. For example, you can change the topic text, or change the task info, and then sync the topic to change the corresponding Outlook item's properties.

Some item properties are included as Topic Properties. To show or hide these:

- Click 🔻 or 🔺 on the linked Outlook item topic.

To edit these:

- Select the topic, then double-click on a property value (right-hand column) to start edit mode.

⚠️ READ NOTE

Some attributes and properties of Outlook topics will be read-only: all information that is read-only in Outlook will also be read-only on the topic. For example, an appointment is read-only for everyone but its owner. Some other information on the map topics may be read-only, but can still be edited by opening the item in Outlook.

Your changes are sent to Outlook the next time you sync the topic.

Open the Outlook item from MindManager

1. Click the topic's Outlook item icon.
2. Click Open Microsoft Outlook item.

The item opens in Outlook so you can edit it. Your changes will appear on the map when you sync the topic.

Disconnect an Outlook query or linked Outlook item topic

1. Click the topic's Outlook query or Outlook item icon.
2. Click Disconnect from Microsoft Outlook.

If you disconnect a query topic, the query definition will be removed from the topic. Its icon will change from 📬 (Outlook query) to 🗂️ (topic with Topic Properties). Its existing results topics will remain linked to and stay in sync with their corresponding Outlook items.

If you disconnect a linked Outlook item topic, its icon changes to 🗂️ (topic with Topic Properties). Its properties are retained as Topic Properties, but it is no longer linked to or synced with its corresponding Outlook item.
Sync queries and linked Outlook item topics

You can sync a query that you have added to your map to get updated results, or sync the query's individual results topics. You can also sync individual linked Outlook item topics that you have added directly to the map. If you have edited the properties on any linked Outlook item topic, your changes will be sent to Outlook, and vice versa.

Sync a query

• On your map, click the Outlook Query topic icon, and then click **Sync query topics with Outlook**.

MindManager will re-run the query to show you the most current results.

Sync all Outlook items - all queries and individual linked Outlook item topics

• On the **Task** tab, **Send Tasks To** group or the **Advanced** tab, **Dashboards** group, click **Outlook Items**, and then click **Sync All Outlook Items in Map**.

Sync specific items

• Select the topics you want to sync. On the **Task** tab, **Send Tasks To** group or the **Advanced** tab, **Dashboards** group, click **Outlook Items**, and then click **Sync Selected Outlook Items**.

• On a linked Outlook item topic, click the Outlook item icon, and then click **Sync with Outlook**.

Press F5

Sync rules

In some cases, if an item has been changed in both Outlook and in MindManager since the last sync, you will be asked to resolve the conflict. Syncing follows these rules.
Work with Microsoft PowerPoint

You can sketch out your basic ideas on a map, create slides to display the topics you choose, and then export your slides to PowerPoint to add high-impact graphics and animations. You can export all your slides or only select slides as a presentation or add slides to an existing presentation. Topics on your slides can be exported as bulleted text or as PowerPoint objects. When you begin the PowerPoint export, MindManager will prompt you for some export Options, and then communicate directly with PowerPoint, instructing it to build the presentation. Then, you can edit the presentation in PowerPoint, if desired.

⚠️ READ NOTE
You must have Microsoft PowerPoint 2003 or later installed on your system to use these features.

MINDJET ONLINE FEATURES
You can save a PowerPoint presentation to Mindjet Files online. See Save a map as a different file type in Mindjet Files for more information.

Export all slides to PowerPoint

1. Create the slides you want to use in your presentation.

⚠️ READ NOTES
Flowcharts cannot be exported to PowerPoint.

Only visible topics are exported. This means you can apply a filter to hide topics you don't want to include in the presentation.
2. Do one of the following:

| On the View tab, click the Presentation button pull-down, and then click Export Slides to Microsoft PowerPoint. | OR | On the Home tab, click the arrow next to the Share button. In the Share drop-down, select Export Slides to Microsoft PowerPoint. | OR | Click the File tab, click Share, then under Export select Export Slides to Microsoft PowerPoint. | OR | In the Slides pane, click the Slides pull-down, and then click Export Slides to Microsoft PowerPoint. |

⚠️ READ NOTES

If you have not already created slides, a dialog box will ask if you want MindManager to create the slides for you.

If you do not see Export Slides to Microsoft PowerPoint in these menus, see Troubleshooting Office add-ins

3. In the Export Map As dialog, the default name for the presentation will be the map name, but you can change this and the save location. Click Save.

4. A dialog appears with the global presentation settings. Check the options you want to use.

5. Click Export.

*Changes to slides using PowerPoint object export*

You may see these changes to your exported slides:

- Images
- Icons
- Rich text formatting
- Spreadsheets, topic properties
- Task Information
- Topic Notes
- Attachments
- Links
- Tags
- Topic Comments
Map elements that are exported, but may be reformatted

- Relationships
- Boundaries
- Callouts
- Topic shape (every topic will become a rectangle)
- Topic connecting lines

Topic growth direction changes

Changes to the Layout directions:
In maps that shift from one Topic Layout direction to a different Layout direction for some or all Subtopics, you may see the following changes:

- Org-chart to Map becomes Org-chart for all topics
- Tree to Map becomes Tree for all topics
- Map to Org-chart becomes Map for all topics

Send selected slides to PowerPoint

1. Select one or more topics on your map.
2. Right-click the slide icon on a topic, and then click Send Slide(s) to Microsoft PowerPoint.
   
   **READ NOTE**
   **READ HINT**

   If a PowerPoint presentation is already open, the slides will be added to the existing presentation, otherwise a new presentation will be created.

   If you do not see Send Slide(s) to Microsoft PowerPoint in these menus, see Troubleshooting Office add-ins.

3. A dialog appears with the global presentation settings. Check the options you want to use.
4. Click Export.
Work with Microsoft Project

MindManager can export tasks from a map to Microsoft Project, and import tasks from Project into a map.

**READ NOTE**

You must have Microsoft Project 2003 or later installed on your system to use these features.

The Project import and export is a one-time operation, and no link is retained between the Project tasks and the MindManager topics.

When you begin the Project export, MindManager will prompt you for some Export Format Settings.

When MindManager imports a set of tasks from Project, it translates the task information from Project into the corresponding MindManager Task Info, and creates a new map with one topic for each task.

---

**Prepare the map for export**

Project uses the MindManager Task Info to fill in the task details, but your topics are not required to have task info defined for them. In other words, you can export a basic set of tasks from MindManager and fill in the information for them in Project.

**READ NOTE**

MindManager's Project export does not use task due dates when it creates new tasks in Project. You should assign a Start Date and Duration value to the task in MindManager. Tasks that contain only Start Dates and Due Dates will result in "0 hrs duration" tasks when exported to Project.

Project can only support a single link per task. If any of your map topics have multiple links, only the first (primary) link is exported. You can re-order the links on a topic if the link you want to export is not the topic's primary link.

**Export an entire map to a Microsoft Project file**

1. Open the map in MindManager.
   **READ HINT**
   Only visible topics are exported. This means you can apply a filter to hide topics you don't want to include in the project.

2. Do **one** of the following:
   - On the **Home** tab, click the arrow next to the **OR**
   - Click the **File** tab, and click **Share**. Then **OR**
   - Click the **File** tab, click **Save As**, and in the
Incorporate data, Microsoft Office, or SharePoint

Share button. In the Share drop-down, select Export Task Info to Microsoft Project. Under Export, click select Export to Microsoft Project. Save as type list select Microsoft Project Files.

**MINDJET ONLINE FEATURES**

You can save the Project file to Mindjet Files online. See [Save a map as a different file type in Mindjet Files](#) for more information.

3. In the export dialog, the default name for the project will be the map name, but you can change this and the location where it is saved.
4. Click **Save**.
5. A dialog appears with the export settings. Check the options you want to use.

A new Project file is created. You can **Open** the project to check it, **Open Folder** where it was saved or **Close** to return to MindManager.

**Export selected topics to a Microsoft Project file**

1. In Project, open the file that you want to add the tasks to. If no project is opened, a new project will be created.
2. In MindManager select the map topics to export.
3. Right-click, click **Send to**, and then click **Microsoft Project**.

![READ NOTE](#)

If you do not see Microsoft Project on the File tab Export menu, or in the **Save as type** list, or in the shortcut menu under **Send To**, see [Troubleshooting Office add-ins](#).

The topics will be exported and added to the end of current project.

The Project export is a one-time operation, and no link is retained between the Project tasks and the MindManager topics. If you export tasks from Project and then make changes to the tasks in MindManager you cannot export the tasks back to Project to update them there. Instead, you can delete the old tasks, then export again. The exported tasks will be added at the end of the project as new tasks.

**Import an entire Project file**

1. Click the **File** tab, click **Import**, and then click **Import Microsoft Project File**.

![READ NOTE](#)

If you do not see Microsoft Project in the list, see [Troubleshooting Office add-ins](#).

2. Select the file you want to import and click **Open**.
3. A dialog appears to let you customize the Import Settings. Once the settings have been adjusted to your liking, click **Import**.

You'll see a status message appear as the file is processed, then the new map will appear.
Import only selected Project tasks

1. To add the tasks to an existing map, open the map in MindManager and select a target topic if desired.
2. Select the tasks in Project.
3. Click the *Send to MindManager Map* button on the Project ribbon, or click File, click *Send to*, then click *MindManager*. MindManager will start and open a new map if it's not already active.

   **READ NOTE**

   If you do not see the *Send to MindManager Map* button on the Project ribbon or in the File menu, see *Troubleshooting Office add-ins*.

4. A dialog appears to let you customize the Import Settings. Once the settings have been adjusted to your liking, click *Import*.

The Project import is a one-time operation, and no link is retained between the Project tasks and the MindManager topics. If you import tasks from Project and then make changes to the tasks in MindManager, you cannot export the tasks back to Project to update the existing Project tasks. Instead, the existing tasks will remain and the exported tasks will be added at the end of the project as new tasks.
Incorporate data, Microsoft Office, or SharePoint

Work with Microsoft Word

The Word Export feature exports your map in outline form to Word. You can export the entire map, or just selected topics.

⚠️ READ NOTE

You must have Microsoft Word 2003 or later installed to use these features.

If you want to include a graphical image of your map in a Word document, you can achieve this by creating an image file from your map and then inserting this into Word.

MindManager can import a Word document and transform the text into a map. An essential part of this process is the proper structuring of the Word document.

The document is processed according to the styles it contains. MindManager uses the Heading styles to determine the map topic hierarchy: text in Heading 1 style becomes Main topics, Heading 2 and greater are subtopics. Text in the Normal style (or any other style that is not a Heading style) is included as text notes for the topic directly preceding it.

What do you want to do?

- Export an entire map to a Word document
- Export selected topics to a Word document
- Import a DOC file
- Import only selected Word paragraphs

See also:

- Work with Microsoft Office
- Filter topics
- Use Outline View

---

**Export an entire map to a Word document**

1. Open the map.

   ✅ READ HINT

   Only visible topics are exported. This means you can apply a filter to hide a set of topics you don't want to include in the document.

   Take a look at the map in Outline View first for a general idea of what the exported Word file will look like.

2. Do one of the following:

   **On the Home tab, click the arrow next to the Share button. In the Share drop-down, select Export to Microsoft Word.**

   OR

   **Click the File tab, and click Share. Then under Export, click select Export to Microsoft Word.**

   OR

   **Click the File tab, click Save As, and in the Save as type list, select Microsoft Word Documents.**
You can save the Word document to Mindjet Files online. See Save a map as a different file type in Mindjet Files for more information.

3. The default name for the document will be the map name, but you can change this and the location where it is saved. Click Save.

4. The Microsoft Word Export Settings dialog appears, so you can tailor the export to your liking.
   - On the General tab, choose the outline numbering scheme, which information to include, and export options for other map elements. Options
   - On the Word Template tab, select the Word template for the document and how topic levels correspond to Word styles. Options
   - On the Advanced tab, select the treatment for relationships, links, attachments, and map graphics. Options
   - By default, bitmaps are converted to metafiles on export for better compatibility with some RTF readers. Disable the MindManager Notes option setting Convert bitmaps to metafiles to disable this behavior.

5. Click Export when you have set the options to your liking.

6. A message appears when the export is done. You can Open the document to check it, Open Folder where it was saved or Close to return to MindManager.

Export selected topics to a Word document

1. To append the exported content to the end of a Word document open it.
2. In MindManager, open the map and select the topics you want to export.
3. Right-click on one of the topics, click Send to, and then click Microsoft Word.
   (Only the selected topics are exported. If a document is already open, the topics are added at the end of the document.)
4. Select the export options in the Word Export Settings dialog (described above).
5. Switch to Word to see your exported content. Remember to save the document before exiting Word.

You can quickly create a simple text outline from part or all of your map in Word by this method:

1. Select one or more topics (select the central topic to copy the whole map)
2. Press CTRL+C to copy
3. Switch to Word, and then press CTRL+V to paste.
Incorporate data, Microsoft Office, or SharePoint

If you do not see **Export to Microsoft Word** on the **File** tab **Export** menu, or in the **Save as type list**, or in the topic shortcuts menu, see **Troubleshooting Office add-ins**.

**Import an entire Word document**

1. Click the **File** tab, click **Import**, and then click **Import Microsoft Word Document**.
   
   ![Read Note]
   
   If you do not see **Microsoft Word Document** in the list, see **Troubleshooting Office add-ins**.

2. Select the file you want to import and click **Open**.

You'll see a status message appear as the file is processed, then the new map will appear in MindManager's Map View window.

**Read Hint**

You can also paste text from Word (and other applications) to create a topic on your current map.

**Import only selected Word paragraphs**

1. **Optional** To add text from Word to an existing map, open the map in MindManager and select a target topic if desired.

   If no map is open in MindManager the Word content will be used to create a new map.

2. Select the paragraph(s) in Word.

3. Click **Send to MindManager Map** on the Word ribbon.

   ![Read Note]

   If you do not see the **Send to MindManager Map** button, see **Troubleshooting Office add-ins**.

4. Switch to MindManager to see the new content in the map.
NOTE: You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

By itself, SharePoint does a great job of storing data, tasks, documents, and other information in a highly structured manner that aligns with your organization's structure, projects, and functions. But, operating only within the structure imposed by SharePoint is not always the most efficient way to gather and process the information you need in order to see the "big picture".

MindManager offers you a new way to organize and use SharePoint data for optimal results. It allows you to aggregate items from multiple SharePoint sites in a single, personalized view, by adding SharePoint items to your map. How does this work?

You can also create new SharePoint items, and send existing tasks from a map to SharePoint, all without leaving the MindManager application.

Items you add to your map from SharePoint and topics you send to SharePoint as tasks maintain live links to their corresponding SharePoint items. You can edit the associated SharePoint items without leaving MindManager.

Your results are updated automatically each time you open the map or change the filter criteria, and by an automatic timed refresh while you work. You can also see updated results at any time by manually refreshing topics.

The Map Index task pane Elements list Business Topics group displays all the topics on your map that contain SharePoint queries, query results, and linked SharePoint topics.

For more information on using maps and files stored on SharePoint servers, see Use maps and files from SharePoint or Web locations.
Incorporate data, Microsoft Office, or SharePoint

Work with SharePoint Items queries

**NOTE:** You will only have access to MindManager’s SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

You can modify the filter criteria for SharePoint Items query topics on your map, and see the new results when you refresh the topic. You can also edit the topic text, and add other subtopics (in addition to the results topics).

**Read Note**

SharePoint queries are disabled for flowcharts.

SharePoint Items query topics can be moved or copied just like other map topics. When moved or copied, the topic retains its functionality: its results topics remain linked to their associated SharePoint items, and they are refreshed when you refresh their parent topic.

For more information about modifying results topics, see [Work with linked SharePoint topics](#).

The Map Index task pane Elements list Business Topics group displays all the topics on your map that contain SharePoint queries, query results, and linked SharePoint topics.

**Edit SharePoint Items query topics**

SharePoint Items query topics display the query type as the topic text. You can edit this text to reflect the filter you are using, for example to change “Tasks” to "High Priority Tasks".

The source site used for this topic is displayed in the Topic Properties. You can show or hide this using the Show / Hide icon on the topic. You cannot edit this information.

**Add other topics**

You can add other topics at the same level as the query results topics, and these are not affected when the query is refreshed.

If you add subtopics to any of the SharePoint query result topics, they will be removed on refresh only when their parent is no longer displayed as a result. This can happen when:

- the item no longer meets the filter criteria
- the item was deleted in SharePoint.
Modify a SharePoint Items query

You can change the site connection and filter criteria used by a SharePoint Items query topic at any time. For example, if you want to show fewer results, more results, or results from a different site, you can adjust the site connection and filter criteria accordingly.

Change filter properties

1. Right-click the SharePoint icon on the query topic.
2. Click Edit SharePoint Query.
3. Use the wizard to change the filter criteria such as the source site, type of items, dates, etc.

SharePoint query wizard hints

You can skip to the information you want to change using the buttons at the left side of the wizard, or step through all the wizard pages by clicking Next.
4. Click Finish at any time.

The topic automatically refreshes, showing you the new set of items that match the filter criteria.

READ NOTE

If your system can't connect to the SharePoint server (due to an error in the URL or an interrupted connection) the parent topic will display an icon showing that the map is disconnected.

Refresh a SharePoint Items query

SharePoint Item queries automatically refresh when you open the map that contains them (if this option is enabled), and individual results topics automatically refresh when their properties change.

To refresh a SharePoint Items query at any time, do any of the following:

- Right-click the SharePoint icon on the query (parent) topic, and then click Refresh.
- On the Task tab, Send Tasks To group, click the SharePoint pull-down, and then click Refresh all SharePoint items in map.
  (This refreshes all queries as well as all linked SharePoint item topics.)
- Select the query topic, and on the Task tab, Send Tasks To group, click the SharePoint pull-down, and then click Refresh Selected SharePoint Items.
- Press F5.

When the query is refreshed, subtopics you have added will be retained, unless they are subtopics of results that are no longer displayed.
While the results are being refreshed, the topic displays the "loading" icon 🔄.
If your system can’t connect to the SharePoint server (due to an error in the URL or an interrupted connection) the parent topic will display an icon showing that the map part is disconnected.

If you have used the MindManager Task Management options (in the Task Info pane) to designate any of your SharePoint tasks as Roll-up tasks, they will not be synced with SharePoint when the query is refreshed.

**Move or copy SharePoint Items query and results topics**

You can move or copy the parent query topic freely without affecting its functionality. If you move a results topic out of the query branch it retains its functionality as well: its properties are kept in sync, its link still connects to the corresponding SharePoint item, and bi-directional sync of task info (for tasks and issues) is retained. But, when you refresh the original query topic, a new results topic is added to replace the one you moved. This can create duplicate items on your map.

**Disconnect a SharePoint Items query topic**

When you disconnect a SharePoint Items query topic, its results topics will no longer be kept in sync with SharePoint, but they will retain their links to their associated SharePoint items.

To disconnect a topic:

- Click the topic's SharePoint icon, and then click **Disconnect from Microsoft SharePoint**.
- If you disconnect a query topic, the query definition will be removed from the topic. Its icon will change from (SharePoint query) to (topic with Topic Properties). The site connection address is retained as a Topic Property. Its existing results topics will remain linked to and stay in sync with their corresponding SharePoint items.

For more information on disconnecting query results topics, see [Work with linked SharePoint topics](#).
Create new SharePoint tasks

**NOTE:** You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

You can send tasks from your map to create new tasks in SharePoint. The topics on your map become linked SharePoint task topics that include a link to their corresponding SharePoint task.

**READ HINT**

Task topics feature two-way communication for their Priority and Progress attributes, and you can change these directly in MindManager.

The Map Index task pane Elements list Business Topics group displays all the linked SharePoint topics on your map.

---

**Send tasks to SharePoint**

You can send any topic on your map to SharePoint to create a new task. The topic you send can just have the task name (as the topic text) but can also contain Task Info and Notes. The following information is sent to SharePoint:

<table>
<thead>
<tr>
<th>Map topic</th>
<th>SharePoint task property</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topic text</td>
<td>Title</td>
</tr>
<tr>
<td>Priority</td>
<td>Priority</td>
</tr>
<tr>
<td>Progress</td>
<td>% Complete</td>
</tr>
<tr>
<td>Start Date</td>
<td>Start Date</td>
</tr>
<tr>
<td>Due Date</td>
<td>Due Date</td>
</tr>
</tbody>
</table>

Other Task info on the topic is ignored by SharePoint. Task Info Resource assignments will be overwritten by the Assigned To task property from SharePoint. You are automatically assigned as the task creator.

To send a topic to SharePoint to create a new task:

1. Select a topic.
2. On the Task tab, Send Tasks To group or the Advanced tab, Dashboards group, click SharePoint, and click Send Items to SharePoint.

3. In the dialog, choose whether to send only the selected topic(s), or to include subtopics.

4. Choose a site from the list of existing site connections, or enter a new SharePoint site address.

5. Choose a Task List on the selected site, and then click Send.

The topic on your map becomes a linked SharePoint task topic. It includes a link to the new task you just created. When you update the Task Info on the topic, the changes are synced to the corresponding SharePoint task.
Work with linked SharePoint topics

NOTE: You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

You can create topics on your map that are dynamically linked to their corresponding SharePoint items in two ways:

- By creating a SharePoint Items query topic - the query results topics are linked to corresponding SharePoint items.
- By sending a task to SharePoint - the task topic is linked to its corresponding SharePoint task.

Linked topics include a link that connects it to its associated SharePoint item (shown as a browser icon, for example 📦). You can click the link icon to view and edit the item in the built-in MindManager Browser or in your system browser (depending on your setting for opening links).

The Map Index task pane Elements list Business Topics group displays all the linked SharePoint topics on your map.

View item properties

In linked topics, the properties of the corresponding SharePoint item are displayed as Topic Properties. You can show or hide these using the Show / Hide icon on the topic. This information is kept in sync with the item's properties in SharePoint. You cannot edit this information.
Edit linked Task and Issue topics

Linked SharePoint task and issue topics are the only topics that feature two-way communication (syncing) with SharePoint. You cannot edit other types of linked topics. These topics display their editable SharePoint properties in the following ways:

Tasks
- Task Title as the topic text
- Priority and % complete as Priority and Progress map markers
- Start and Due dates as Task Info

Issues
- Priority as Priority map marker

When you change this information on a linked SharePoint topic in MindManager, the associated item is immediately updated in SharePoint.

Read Note
Mindjet Task Priorities 4 and 5 are mapped to SharePoint priority 3.

View and edit SharePoint items

Each linked SharePoint topic has a link (shown as a browser icon, for example) that connects it to its associated SharePoint item. You can click this icon to edit the item. These links also connect topics to SharePoint folders (if the query results are grouped by folder).

Topics with additional links will display the MindManager link icon.

1. Click the link icon on the topic, or click the multiple links icon and then click the link to the item in the list of links.
2. The next steps depend on the type of item you are opening, and your option settings:
   - **Calendar Items, Tasks, Issues, and List Items**
     Open in SharePoint in the mode (View mode or Edit mode) specified by the option **Open SharePoint Item In**. These items open in MindManager's built-in browser, or in your external browser depending on the setting you have chosen for opening links in the **Link** pull-down menu on the Home or Insert tab.
   - **Maps**
     Open in MindManager for editing. The map is locked on the server so no other user can edit it. You can check out the map (on the File tab Info menu) to let other users see that you are working on it. See Edit a map from SharePoint or a Web location for more information.
   - **Microsoft Office documents**
     Open in their respective applications. The document is opened from the server in Read-only mode. Click Edit document to make changes. When you are finished editing, Save the document to send your changes back to the server.
• **Other files that can be displayed in a browser**
  Display in MindManager's built-in browser, or in your external browser depending on the setting you have chosen for opening links in the **Link** pull-down menu on the **Home** or **Insert** tab. You cannot edit these files.

• **Files that cannot be displayed in a browser**
  These can be downloaded and opened in their native applications. Editing the file does not change the source file on the server, but you can upload the edited version to SharePoint to replace the previous version.

*Refresh linked SharePoint item topics*

Linked SharePoint item topics automatically refresh when you open the map that contains them (if this option is enabled), and whenever their synced properties change.

To refresh linked SharePoint item topics at any time:

- To refresh a single topic, click the SharePoint icon on the topic, and then click **Refresh**.
- To refresh specific linked SharePoint item topics or SharePoint queries on your map, select the topics, and then click **Refresh Selected SharePoint items** in the SharePoint pull-down on the Home tab or the Insert tab.
- To refresh all the linked SharePoint item topics and all the SharePoint queries on your map, click **Refresh All SharePoint items in Map** in the SharePoint pull-down on the Home tab.

While the topics are being refreshed, the topic displays the "loading" icon 🔄.

⚠️ **READ NOTE**

If your system can't connect to the SharePoint server (due to an interrupted connection) the topic will display an icon 🐜 showing that the topic is disconnected.

*Disconnect a linked topic*

If you disconnect a linked SharePoint topic, it becomes a normal topic that is no longer synced with its associated SharePoint item. It retains the item's properties as Topic Properties, and a link to the item.

To disconnect a topic:

- Click the topic's SharePoint icon 🌐, and then click **Disconnect from Microsoft SharePoint**.
- You'll see the topic icon change from 🌐 (topic linked to SharePoint) to 🌐 (topic with Topic Properties). If the topic is a query results topic, it will remain in the branch until you move or delete it. Refreshing the query will not remove it, and may result in an identical linked topic in the query results.
Distribute maps with SharePoint topics

**NOTE:** You will only have access to MindManager’s SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

The easiest way to make your maps available to other SharePoint users is by saving them to a SharePoint site. You can also distribute maps that contain SharePoint queries and tasks to other users by sending them as email attachments or by copying them to a shared network drive. If the other users are connected to the SharePoint sites that the map topics use, they will see current results. If users do not have a connection to the sites used by the SharePoint queries and tasks, they will see static topics - the parent SharePoint topics will be shown as disconnected, and cannot be refreshed until a connection to the site is established.

✅ **Read Hint**

You can share your list of site connections with other users by exporting the list to a file, and then sending the file to them. This file contains only the site connection URL’s, and the names you have assigned to the connections. It does not contain your SharePoint login credentials. Users who receive the site connections file can import it to add the sites to their own SharePoint site connections list, but they must provide the proper credentials when connecting.

See also:

- SharePoint site connections and options
- Send maps
SharePoint site connections and options

**NOTE:** You will only have access to MindManager’s SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

You do not have to define a site in advance to use it - each **wizard** gives you the opportunity to define new sites as you need them, and automatically adds them to the list.

---

**Add and manage sites**

The **SharePoint sites** list shows all your available sites.

### Create a site connection

1. In the wizard, to create a new entry in the site list click **Add**.
2. Enter a name for the new connection, (for example **Alpha Project SharePoint Site**).
3. Enter the URL for the connection (for example: http://project_sites/alpha_project/).

### Manage sites

- To manage your site list, select a site in the list and then click **Edit** (to modify the site’s name or URL), or **Delete** to remove a site from the list.
Incorporate data, Microsoft Office, or SharePoint

**Export and import site lists**

- **Share sites** creates an .xml file with the names and URL's of your current SharePoint sites. You can send this list to a colleague, or use it on another system as a shortcut for re-creating your site list. *This file does not include your SharePoint login credentials for the sites.*

- **Import sites** reads a list of sites from a file created using the Share sites option. The imported sites are added to your list of existing sites. This can result in duplicate sites in your SharePoint Sites list, but you can remove the duplicates by using the Delete command.

**Options**

**Open SharePoint item in:** determines how SharePoint items are displayed in the browser when you click the link to open the item on your map in SharePoint. Choose the mode that best suits your needs

- **View Mode** shows item in the browser in SharePoint's View mode. Use this mode if you primarily want to view, not edit items. You can still edit the item by clicking the SharePoint Edit item button.

- **Edit Mode** shows the item in SharePoint's edit mode. Use this mode if you frequently edit items.

**Display SharePoint Map Part as:** determines whether the map parts are initially shown as expanded or collapsed topics.

- **Expanded Topic** shows the results subtopics as they are added or updated. You see the results immediately, but the map view may be adjusted as the new topics are created.

- **Collapsed Topic** hides the results topics until you expand the map part topic. You don't see the results immediately, but you can continue working without distraction.

**Enable Periodic Refresh Interval:** determines how often the map parts refresh automatically. Frequently refreshing a map with many SharePoint topics can slow your system's performance. If you are working with large maps, you may prefer to disable this feature and refresh your map manually.

**Refresh on Map Open:** automatically refreshes SharePoint topics on the map when you open it. You may prefer to disable this option when working with large maps.

**Use maps and files from SharePoint or web locations**

**Create a new map in SharePoint or a web location**

**NOTE:** You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

You can save a new map that you have just created to SharePoint or a Web location, and then continue to work on it, or close it.

1. Do one of the following:
Click the **File** tab, and then click **Save**. **Or** Click **Save** on the Quick Access toolbar. **Or** Press **CTRL+S**.

2. In the dialog, navigate to the location where you want to save the map, and enter a **File name**.

   **READ HINT**
   
   If you don't see the location under My Computer, you can enter the full path to the file in the File name field.

3. Click **Save**.

   The new map is saved to the server. It remains locked until you close it. You can continue to work on the map and save it when you are finished.

   If you are using a SharePoint server, you may want to **check out** the map while you continue to work on it.

   **Save a local map to SharePoint or a web location**

   **NOTE:** You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

   You can save an existing local map to SharePoint or a Web location.

   1. Click the **File** tab, and then click **Save As**.

   2. In the dialog, navigate to the location where you want to save the map, and enter a **File name**.

      **READ HINT**
      
      If you don't see the location under My Network Places (XP) or My Computer (Vista or Windows 7), you can enter the full path to the file in the File name field.

   3. Click **Save**.

      The map is saved to the server. It remains locked until you close it. You can continue to work on the map and save it when you are finished.

      If you are using a SharePoint server, you may want to **check out** the map while you continue to work on it.
View or edit a map from SharePoint or a web location

NOTE: You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

You can view and edit maps from a SharePoint or a Web location using the Open and Save commands in MindManager. In addition, you can check out a map that you have opened for editing "offline" - that is, you can continue to edit and save the map even if you do not have a connection to the server. When a connection is available, you check in the map to save the changes to the server.

RED NOTE
If you open a map from the SharePoint web page in your browser, a local copy of the map is created and opened in MindManager. If you edit this map, your changes will only be saved to the local copy of the map.

Maps that are opened as link targets will open for editing (like using the Open command): the map will be locked on the server.

View a map

- Click File > Open, click the Open button pull-down, and then click Open as Read-Only.

This does not lock the file on the server, and opens the map as a read-only file that you can view, but not edit. You will see a Map Status indicator in the upper-left mapping window indicating that the map is read-only. You cannot edit this map, but you can save a local copy of it.

Open a copy of a map

- Click File > Open, click the Open button pull-down, and then click Open as Copy

This creates a new, unnamed map by duplicating the original from the server. This new map is independent of the original. You can edit the map and save it wherever you choose.

Edit and save a map

When you want to edit a map, you open it:

- Click File > Open, click the Open button pull-down, and then click Open.
If the map you are opening is locked or checked out by another user, you are given the option to open the map in read-only mode. In this mode, you can view, but not save the map.

This locks the file on the server so you can edit it. Other users cannot edit the map while it is locked.

You can now edit the map, or you may decide to check it out first:

<table>
<thead>
<tr>
<th>Edit without check-out</th>
<th>Edit with checkout</th>
</tr>
</thead>
<tbody>
<tr>
<td>The map is locked on the server, but users do not see who is editing it.</td>
<td>The map is locked on the server, and shown as checked out to you.</td>
</tr>
<tr>
<td>When you save the map, changes are sent directly to the server (may be slow).</td>
<td>When you save the map, your changes are saved locally by default (faster than saving to the server). The changed map is not saved to the server until you check it in.</td>
</tr>
<tr>
<td>You cannot save your changes as you edit unless you are connected to the server.</td>
<td>You can save changes (locally) as you edit without being connected to the server. You can check in the map when you have a connection to save your changes to the server.</td>
</tr>
<tr>
<td>Users who view the map see the changes you have saved.</td>
<td>Users who view the map do not see the changes you have saved until you check in the map.</td>
</tr>
<tr>
<td>The map stays locked until you close it.</td>
<td>The map stays locked until you check it in.</td>
</tr>
</tbody>
</table>

**Edit a map without check-out**

Edit the map as usual. Other users cannot edit it as long as you have the map open.

To save your changes to the server, but continue working on the map, do one of the following:

- Click the **File** tab, and then click **Save**.
- **Or** Click **Save** on the Quick Access toolbar.
- **Or** Press **CTRL+S**.

When you are finished editing, close the map by doing one of the following:

- Click **File** > **Close**.
- **OR** Click the Close button at upper-right of the mapping window:

You will be prompted to save your changes. When the map closes, it will be unlocked on the server.
Edit a map with check-out

**Read Note**

To enable features for map check-out and check-in, you should enable this option for opening SharePoint files.

To check out the map:
- Click the **File > Info > Check Out**.

The first time you check out a SharePoint map, MindManager shows you the "Drafts" location, and gives you a chance to change the Offline editing options for SharePoint servers. By default, MindManager stores drafts locally. This can make editing your map faster, and allows you to edit it "offline" when you don't have an internet connection (for example, if you are on a plane).

In the upper-left mapping window you'll see that the map is checked out:

To save your changes to the "Drafts" location, but continue working on the map, do one of the following:
- Click the **File tab, and then click Save**.
- Click **Save** on the Quick Access toolbar.
  - Press **CTRL+S**.

**Read Note**

If the option to save drafts locally is enabled (the default), other users who view the map from SharePoint will not see these changes until you check in the map.

**Read Hint**

If the option to save Drafts locally is enabled you can close the map, then resume editing later. (See Offline editing below.)

To check in changes to the server:
1. Click the **File tab, click Info, and then click Check In**.
2. You will be prompted to enter a comment for this version of the file.
3. If you want to keep working on the map, select "Keep the document checked out after checking in this version". The map stays open and checked out.
4. The map is checked in and unlocked (unless you opted to keep it checked out). The map remains open in read-only mode. You can view, but not edit this map.

**Read Note**

If you simply close a map that is checked out, you will be prompted to check it in.
Offline editing

If you have set the offline editing options to save drafts locally, you can continue to edit and save the map even when you don't have an Internet connection.

To edit a map offline:

- Open the map from the SharePoint Drafts folder, edit as usual, and save it back to this folder.

When your Internet connection is restored, you can open the map again, then check it in to send your edited map back to the SharePoint server.

Use other files from a SharePoint or web location

NOTE: You will only have access to MindManager's SharePoint features if you are using MindManager Enterprise. If another user shares a map with you that includes SharePoint icons, those icons may be disabled.

In addition to storing maps on a SharePoint or Web location, you can also use files at these locations with MindManager in the following ways:

<table>
<thead>
<tr>
<th>Attachments</th>
<th>Add files from the server as attachments that are stored inside the map</th>
</tr>
</thead>
<tbody>
<tr>
<td>Images from files</td>
<td>Add images to topics from SharePoint or Web locations.</td>
</tr>
</tbody>
</table>

If you link to a folder at a SharePoint location, the folder contents show in SharePoint's web view.

Links to files behave differently depending on the file type:

- **Maps**
  
  Open in MindManager for editing. The map is locked on the server so no other user can edit it. You can check out the map (on the File tab Info menu) to let other users see that you are working on it. See Edit a map from SharePoint or a Web location for more information.

- **Microsoft Office documents**
  
  Open in their respective applications. The document is opened from the server in Read-only mode. Click Edit document to make changes. When you are finished editing, Save the document to send your changes back to the server.

- **Other files that can be displayed in a browser**
  
  Display in MindManager's built-in browser, or in your external browser depending on the setting you have chosen for opening links in the Link pull-down menu on the Insert tab. You cannot edit these files.
- **Files that cannot be displayed in a browser**
  These can be downloaded and opened in their native applications. Editing the file does not change the source file on the server, but you can upload the edited version to the server to replace the previous version.

<table>
<thead>
<tr>
<th><strong>Export</strong></th>
<th>Export your map in a different format (for example as a Word document, or as an image) to a SharePoint or Web location.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Insert map</strong></td>
<td>Insert a map from a SharePoint or Web location into another map.</td>
</tr>
<tr>
<td><strong>Template organizer items</strong></td>
<td>Create map templates and themes, map marker lists, and web templates at a SharePoint or Web location, and add them to the organizer from these locations.</td>
</tr>
<tr>
<td><strong>Map Parts</strong></td>
<td>Create and use map parts, and add them to the Map Parts task pane from these locations. Use a SharePoint or Web location as a source for the File Explorer Smart Map Parts.*</td>
</tr>
<tr>
<td><strong>My Maps</strong></td>
<td>Add shortcuts to maps or folders at these locations. *</td>
</tr>
<tr>
<td><strong>Search</strong></td>
<td>Search folders at these locations. *</td>
</tr>
</tbody>
</table>

* These features only function for SharePoint and Web locations if you have mapped a drive letter to the location you want to use.
Work with Mindjet Files & Tasks

What are Mindjet Files & Tasks?

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

MindManager's online features address the need for individuals, teams, and businesses to gather, create, plan, and act on information and ideas in a collaborative, visual way.

They provide:
- Online storage and sharing of maps and other files
- Online task and project management
- Multi-user collaboration capabilities
- Cloud-based document management
- Web-based visual mapping

Mindjet desktop, web, and mobile applications include features for working online with Mindjet Files and Mindjet Tasks. Store your maps online as Mindjet Files, and easily share them with anyone for viewing or editing. Track, manage and create online Mindjet Tasks right from your map. You can access Mindjet Files and Mindjet Tasks anywhere from virtually any device.

How do I use the MindManager's online features?

You just need to log in to Mindjet using MindManager. To get started, see [Mindjet collaboration basics](#).

How do I start collaborating online?

**NOTE:** You may not have access to MindManager's online features. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn on MindManager's online features using Options.

You use the email address and password you provided when you signed up for Mindjet to log in and enable online features in MindManager for Windows.
Log in to Mindjet Files, Project Director, or Mindjet Plus accounts

1. In MindManager for Windows, on the bottom status bar, click Login to Mindjet Files.
2. Click Log In to Mindjet, and then enter the email address and password you provided when you purchased the application.
3. Click Log In.

   If you are using a proxy server to connect to the Internet, you may be prompted to enter a User name and Password for your proxy server. Contact your system administrator for more information. Proxy Settings can be configured using MindManager Options.

4. To see the Mindjet Files window displaying your Mindjet accounts and their content, click Mindjet Files, then click View Mindjet Files in the menu. You'll see your own account, and any other accounts where you have been invited to share content. To learn more, see The Mindjet Files Window.

By default, MindManager remembers your password, and you are automatically logged in to Mindjet each time you start the application. To change this, use the Online Access options.

For more information on logging out of Mindjet and working offline, see Log out, or work offline.

Mindjet Collaboration basics

Mindjet Files & Tasks Overview

NOTE: The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

Here is an overview of the basic steps for collaborating online with Mindjet Files & Tasks.

1. Get connected

   Log in to Mindjet to enable collaboration features in MindManager for Windows.

1. In the lower-left corner of the MindManager for Windows, click Login to Mindjet Files.
2. Log in with your email and password.
3. When you have successfully connected, the button will change to Mindjet Files.
4. Click Mindjet Files, then click View Mindjet Files from the menu to see the Mindjet Files window and access your files online in Mindjet's cloud.
5. [If you want to log out, click ![Mindjet Files](image), and then click **Log Out of Mindjet Files**.]

Initially the **Mindjet Files** window is empty. Once it contains shared content, it will look something like this.

A Ribbon with commands for using files and folders.
B List of accounts and folders.
C Account Owner for the selected account, or list of users with access to the current folder.
D Files in the current folder.
E Properties and Previous Versions of the current file.
F List of users with access to the current file.

*Use online maps and documents in Mindjet Files*

Store maps and other documents in Mindjet Files online.

**Add documents to your account by creating new maps on-the-fly.**
In the **Mindjet Files** window ribbon click **New Map**.
A new map will be created in the Files list. Right-click to rename it.

**Import existing documents to your account by uploading them from your local system.**
In the **Mindjet Files** window ribbon click **Upload**.
Select a file to upload to your online account.

**Save maps and export files into your account.**
In the **Save As** dialog in MindManager click **Save in Mindjet Files**.
Share Mindjet Files content with other people

Share files and folders with other people.
- In the Mindjet Files window, select a file or folder, and then click Share. If you share a folder, the person you share with will have access to all the folder content.
- If you are already viewing an online map from Mindjet Files, click the arrow next to the Share button on the MindManager window’s Home tab. In the Share drop-down, select Share in Mindjet Files.

See who has Access to content.
- Check access to the current file or folder for yourself and other users in the File Access and Folder Access panes.

Collaborate on maps and files

View and edit shared maps with other users in real-time (co-mapping).
In the Mindjet Files window, select a map and then double-click, or click Open. If someone is already editing, they are listed in the Map Users column.
The map opens for editing or viewing, depending on your access level. Read-only access is indicated at upper-left.
An indicator at upper-right shows how many people are currently editing the map. You'll see changes made by others in real-time.

Edit online files securely using the document management features.
To ensure that no other users can make changes while you are editing, you can check out a map or file. Other users can still view it when it is checked out.
In the Mindjet Files window, select the file and then click Check Out.
When you have a file checked out, it displays the "checked out" icon in the Files list.

Maps open for editing. Edit as usual, then either leave the map open or close it.

Other files open in their respective applications. Edit and then save the file.

When you are finished editing, return to the Mindjet Files window and click **Check In**.

(If you don't want to save the changes you made, click **Discard Checkout** instead.)

---

**Manage your Mindjet Files content**

**Manage files**

Use commands on the Mindjet Files window ribbon to manage your files.

- Right-click a file name for access to file commands.
- Drag a file to a different folder to move it.

To create a "snapshot" of the file, in the lower pane click the **Previous Versions** tab, and then click **Create**.

**Manage folders**

Use commands on the Mindjet Files window ribbon to manage your folders.

- Right-click a folder name for access to folder commands.
- Drag folders to re-organize them.

---

**3 Use online tasks from Mindjet Tasks**

**Create online Mindjet Tasks from map topics**

Use any topic to create a new task online in Mindjet Tasks that you can edit and track from any Mindjet application.

You can assign task info, and a resource from your list of Mindjet Connections. Task assignments automatically send an email notification to the person assigned the task.

Select the topic, and on the **Task** tab, **Send Tasks To** group, click **Mindjet Tasks**. The topic on the map is used to create Mindjet Task online.
The map topic is dynamically linked to its corresponding online task. The link is bidirectional, so changes you make to the task topic on the map are synced to the Mindjet Task online, and the map topic always displays current task information. Use the topic link to open the task online in Mindjet ProjectDirector where you can view and manage your Mindjet Tasks and projects online.

**Track and update online Mindjet Tasks with map dashboards**

Create dashboards on your maps to track and update the status of your online Mindjet Tasks and projects. Use a pre-defined filter, or create your own query to choose which tasks to display: view the status of tasks assigned to individuals, groups, or entire projects, or filter on due date or % complete. Query information is stored in the topic, and when the query is run, its results appear as subtopics.

Query results topics feature bidirectional links to their corresponding online Mindjet Tasks, so you can edit the task directly from your map. If the Mindjet Task is edited from another Mindjet application, the map will instantly display the new information.

Use Mindjet Task topic links to open the tasks in your browser using the Mindjet ProjectDirector web app.

**The Mindjet Files window**
NOTE: The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can use and manage maps and other files stored online in Mindjet's cloud from the Mindjet Files window.

**READ HINT**

Many commands are available in the shortcut menus for accounts, folders, and files (right-click an account, folder, or file name to see shortcuts).

Once you have logged in to Mindjet in MindManager for Windows, you can switch to the Mindjet Files window by clicking on the bottom status bar, then clicking from the menu.

In the Mindjet Files window, you can switch back to the main MindManager window by clicking on the Mindjet Files window status bar.

The Mindjet Files window shows the online content that you can access.

A. Mindjet Files button and ribbon  
B. Folders list  
C. Account Details or Folder Access list  
D. Files list  
E. Properties and Previous Versions pane  
F. File Access list
Mindjet Files button and ribbon

The Mindjet Files button lets you close the Mindjet Files window (note that this is not the same as logging out of Mindjet - you remain logged in until you log out or close MindManager for Windows). You can also use the Online Access options from this button's menu. The ribbon contains commands that allow you to add and manage maps, other files and folders, and share your online content. It also gives you access to account management and contact management features.

Folders list

The Folders list displays all of the accounts that you belong to, and their folders. You'll see your own account, and other accounts where you have been invited to share content as a Guest or Member. Guests and Members see only the folders that they have access to in each account.

⚠️ READ NOTE

MindManager for Windows does not display Projects created with Mindjet ProjectDirector. Content that resides within a Project cannot be accessed in the Mindjet Files window of MindManager for Windows. Only content that does not reside within a Project (visible in ProjectDirector's Library view) can be accessed in the Mindjet Files window of MindManager for Windows.

Account Details or Folder Access list

If an account is selected in the Folders list, the Account Details are displayed, showing the list of users in the account, and their roles.

If a folder is selected in the Folders list, the Folder Access list is displayed, showing the list of users with access to the folder, their role in the account, and their Access Level for the folder.

Files list

The files list displays the files in the currently-selected account or folder. Owners and Administrators see all the content in the account. Members see only the files they have created or uploaded, and the files that have been shared with them. Guests see only files that have been shared with them.

This list also displays:

- Favorite indicator ⭐.
- who is currently editing or viewing a map.
- whether a file is checked out (indicated by ✔; the Properties pane shows who has it checked out).
- the file size.
- when the file was last modified.
- when the file was last cached (A copy is saved on your local system whenever you edit or view a map or file).
In **offline mode**, files that have been cached are shown as available (black text) while those that have not been cached are shown as disabled (gray text).

You can sort the list by clicking the column headings.

Clicking in the Favorite ★ column for any file toggles its Favorite indicator.

**Properties and Previous Versions pane**

This pane shows information about the file that is selected in the Files list. The Previous Versions pane will be empty until a user saves a [version](#) of the file.

**File Access list**

When you select a file in the Files list, this list displays the users with access to the file, their role in the account, and their [Access level](#) for the file.

**Your Mindjet Account**

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

In a Mindjet account, you are assigned a role that defines your rights within the account for using maps and files. You can be a user in multiple accounts - your own, and other accounts that you have been invited to.

When you sign up for Mindjet, you create a Mindjet Profile, which contains your basic information, your email preferences, and your password. You can update your profile and manage your account(s) online using the Mindjet ProjectDirector web app.
Understand account roles

Mindjet Accounts have an Owner, Administrators (optional), Members, and Guests.

- You are the Owner and Administrator of your own account. You can promote other account Members to be Administrators.
- If you were invited to join an account or share content you are a Member or a Guest in that account.
- Owners and Administrators have full privileges within the account.
- Members and Guests have limited privileges.

**Read Note**
Your role in the account and your access rights for items within the account determine your ability to use certain online features in MindManager. If performing an action is not permitted, the command will be disabled. (For complete information about the different permission levels, see Understand access rights.)
Edit your profile

When you sign up for Mindjet, you provide an email address and a password, and create your Mindjet Profile. You can edit your profile information at any time by logging in to your Mindjet account using the MindjetProjectDirector web app. See the Mindjet ProjectDirector Help for more information on changing your profile.

Manage your account and account users

To view the details for the accounts you belong to:

- In the Mindjet Files window ribbon, click **Account Management**.

The Mindjet ProjectDirector web app will start in your browser, and when you log in it will display the Account Management page. You can manage the account's details and users. Your ability to use the account management features depends on your role in the account.

See the Mindjet ProjectDirector web app Help for more information on managing your account.

Log out or work offline

To enable online features in MindManager for Windows, you **log in**.

When you want to disconnect from Mindjet, you have **two** choices:

- **Log out** to disconnect and stop using online Mindjet Files.
- **Work offline** to disconnect but continue working with local copies of your maps and files from Mindjet Files.

Your choice will depend on whether you still want to access local copies of your maps and files. MindManager creates local copies of online Mindjet Files that you can edit offline when you check out a document. It also caches a local copy that you can view (read-only) when you view or edit a document from Mindjet Files.

Log out

If you are using a shared computer, you can protect your Mindjet Accounts from unauthorized access by logging out of Mindjet before you close MindManager for Windows. By default, MindManager remembers your login settings. You can set an option to change this to protect your account.

1. On the bottom status bar, click ![Mindjet Files](icon).
2. In the menu, click **Log Out of Mindjet Files**.
3. The button changes to ![Login to Mindjet Files](icon).

When you log out, your login settings are cleared, and any locally-cached copies of your documents are deleted. (Documents are cached by MindManager when you view or edit them.) You retain local copies of documents you have checked out.

To re-connect to Mindjet you must **log in** again.
Work offline

If you want to continue working on maps and files that you have checked out, or view the cached copies of maps and files, you should use the Work Offline feature:

1. In MindManager desktop, on the bottom status bar, click "Mindjet Files".
2. In the menu, click Work Offline.
3. The button changes to "Mindjet Files".

In offline mode, the locally-cached copies of maps and files are retained, and you can still use the commands in the Mindjet Files window. Items that have not been cached are grayed to show that they are disabled in this mode. Items that have been cached (that you can view or edit) are shown in normal type.

You can edit and save maps and files that you have checked out, and you can check them in when you re-connect to Mindjet.

You can also view any maps and files that you have cached locally (as indicated in the Mindjet Files window Files list). Note that these local copies may be out of date: they were created automatically the last time you viewed or edited the map or file, which may have been edited subsequently by another user.

- To re-connect, click "Mindjet Files" and then click Work Online in the menu.

By default, MindManager remembers your username and password and logs you in to your account automatically. You can set an option to change this.
Using Mindjet Files

Use maps online in Mindjet Files

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can create, upload, edit, manage, and **share** your maps online in Mindjet's cloud with other users using commands on the Mindjet Files window ribbon, and in the right-click shortcut menus. You can add maps to your accounts using Mindjet Files window commands to create new maps or upload maps that you have already created with MindManager for Windows. You can also use the MindManager **Save As** command to save maps directly to Mindjet Files. Once a map is online in Mindjet Files, you can access it from any Mindjet application.

---

**READ NOTE**

MindManager for Windows does not display Projects created with Mindjet ProjectDirector. Content that resides within a Project cannot be accessed in the Mindjet Files window of MindManager for Windows. Only content that does not reside within a Project (visible in ProjectDirector's Library view) can be accessed in the Mindjet Files window of MindManager for Windows.

When you edit a map from Mindjet Files, other users with Edit access can simultaneously open and edit the map, and you can see their edits in real time. This is called co-editing.

If you want to edit a map, but prefer to “lock” it so that other users cannot edit it, you can check out the map. While the map is checked out, users with Edit access cannot edit it, though they can open a read-only copy. When you check out a map, you can choose to edit it online or offline. The original map can be viewed, but not edited, by other users. When you are done editing, you check in the map to save your edits, or discard the checkout to ignore your changes.

---

**READ NOTE**

Your role in the account and your access rights for items within the account determine your ability to use certain online features in Mindjet Files.
MindManager. If performing an action is not permitted, the command will be disabled. (For complete information about the different permission levels, see Understand access rights.)

Create a new map in Mindjet Files

To create a map:

1. On the Mindjet Files window ribbon, click **New Map**.
2. The map is added to the Files list with the name Map.mmap. You can **rename** it.
3. Double-click the map name to open it for **editing** to add content.

See Mapping for more information about creating maps.

Initially, when a map is created it is only accessible by the user who created it, and by the account’s Owner and Administrator(s). You can give other users access to it by sharing it with them.

Upload a map to Mindjet Files

If you have maps that you created with MindManager stored locally on your computer, you can upload them to Mindjet Files. Once uploaded, the maps are stored online in Mindjet’s cloud.

⚠️ **READ NOTE**

If you upload a map that has links to other maps and files, you should upload these files at the same time. Once uploaded, you must edit the map’s attachments and links to point to the uploaded files, otherwise they will continue to point to local copies on your computer.

To upload one or more maps:

1. Select the account or folder into which you want to upload the map.
   
   You must have Edit permission for the account or folder you choose.
2. On the Mindjet Files window ribbon, click **Upload**.
3. In the dialog, select the maps you want to upload, and click **Upload**.

✔️ **READ HINT**

Select one or more files in your system’s File Explorer, and drag them into the Files list.

⚠️ **READ NOTE**

If you upload a map that has the same name as an existing map in that location, you will be warned, and you can choose to overwrite the file, or upload the new file with a different name. If you choose to overwrite the file, you can create a version to "set aside" the existing file, and it will then be replaced with the new file. If you have the file checked out, your checked-out copy will be replaced with the new file, but the original online version will remain unchanged until you check it in.

The uploaded maps appears in the location you selected. Initially, when a map is uploaded it is only accessible by the user who uploaded it, and by the account’s Owner and Administrator(s). You can give other users access to it by sharing it with them.
Save a map to Mindjet Files

You can save a map that you have open in MindManager for Windows directly into Mindjet Files online.

1. On the MindManager window ribbon, click File, and then click Save As.
2. In the Save As dialog, click Save in Mindjet Files and then select the account (and folder) where you want to save the map.
   You must have Edit permission for the account or folder you choose.
3. Click Save.

In the Mindjet Files window, the map appears in the location you selected. Initially, when a map is saved to Mindjet Files it is only accessible by the user who saved it, and by the account’s Owner and Administrator(s). You can give other users access to it by Sharing it with them.

⚠️ READ NOTE

If you save a map that has the same name as an existing map in that location, you will be warned, and you can choose to overwrite the file, or upload the new file with a different name. If you choose to overwrite the file, you can create a version to "set aside" the existing file, and it will then be replaced with the new file. If you have the file checked out, your checked-out copy will be replaced with the new file, but the original online version will remain unchanged until you check it in.

Search for a map in Mindjet Files

MindManager for Windows can search online Mindjet Files for text in a map name, or within a map, across all files and folders within an account. Searches are specific to an account: if you want to search for the same text in more than one account, you must conduct separate searches in each account.

To search for a specific filename or text string:

1. At the top of the Mindjet Files window, enter the text in the Find field.
2. Click 🕵️ to select the account you want to search.
3. The main MindManager window opens, displaying the Search Task pane with your search results. For maps, this pane will list all occurrences of the search term. Click a map name to open it and see the matching text.

See Search for maps or documents for more information on using the Search feature.

Open maps for co-editing from Mindjet Files

When you want to edit a map that is online in Mindjet Files you open it from the Mindjet Files window or the main MindManager window. When you open the map it is available for co-editing by other users, and you can open and edit a map that someone else is already editing (indicated in the Mindjet Files window Map Users column).

If you want to prevent other users from making changes to the map while you edit it, you can check it out.

⚠️ READ NOTE
If the map you wish to edit is checked out by another user (indicated by an icon in the Files list), the map will open in read-only mode; you cannot edit it until the map is checked in again.

To open maps from the Mindjet Files window:
1. In the Files list, select the map(s) you want to edit.
2. On the ribbon, click Open.

**READ HINT**
Double-click a map name to open it immediately for co-editing.

To open a recently-used map, click File > Recent, then click the map in the Recent Files list.

To open a map from the main MindManager window:
1. Click File > Open and then click the Open from Mindjet Files button.
2. Select the map(s) you want to open, then click Open.

**READ HINT**
Double-click a map name to open it immediately for co-editing.

You can open multiple files (including a combination of files and maps) by using CTRL+click to select multiple items.

When a map opens, you’ll see indicators that show if the map is read-only and who else is editing the map. You’ll also see “hints” when a portion of the map has been revised.

**Co-mapping indicators**
In Mapping view, the Map Status indicator at upper-left indicates if the map is read-only. For example:

Maps are opened in Read-Only mode if:
- You have Read-Only access to the map.
- The map has been checked out by another user (indicated by in the Files list).
- The map is still loading.
- You have opened the map in Read-Only mode.
- You are working offline and you have not checked out the map.

If the map can be edited, the Map Status indicator will not appear.

When you are editing a map, an indicator at upper-right tells you who else is viewing or editing the map, and their access level:

- = a user with Read-Only access to the map.
- = a user with Write access to the map.
- = a user who has opened the map in Read-Only mode.
To see which topic a user currently has selected, right-click the list, then select their name from the **Find in Map** list. The map will scroll and expand to reveal their position.

If other users are also editing the map (and if you view the area they are editing) you will see their changes in real time. More information appears when you rest the pointer over a hint.

You can set options for these hints by using the **Map Activity** option on the main MindManager window ribbon's View tab.

See Mapping for more information about editing maps.

---

**Save and close a map in Mindjet Files**

When you edit a map, your changes are saved at regular intervals (determined by the Online Access options setting). When you close a map, it is saved automatically. To ensure that your most recent edits are saved at any time:

1. On the main MindManager window ribbon, click the **Files** tab, and then click **Save**.

   **Read Hint**

   Click the **Save** button on the Quick Access Toolbar.

**Read Note**

**Do not use the Save As command to save the map to a different location.** This will only create a local copy of the map, and your changes will not be saved online in Mindjet Files.

To close the map:

1. On the main MindManager window ribbon, click the **Files** tab, and then click **Close**.

   **Read Hint**

   Click the **Close** button at the upper-right corner of the map.

Mindjet saves the map online to Mindjet Files, and then closes it.

If you have any maps open from Mindjet Files when you exit MindManager, they will be saved before the application exits.

---

**Check out maps for editing from Mindjet Files**

If you want to edit a map and prevent other users from making changes to it while you are editing, you must check it out. When you check out a map, you effectively lock it: other users cannot edit it, though they can open a read-only copy. Other users also cannot delete or move a map that is checked out.

When you are finished editing the checked out map, check it back in so that others can view the revised map or edit it themselves.

**Read Note**
You cannot check out a map that is already checked out by another user (indicated by ✓ in the Files list). While waiting for the map to be checked back in, you can open a read-only copy. You can check out a map that is already checked out by you on a different device.

You check out maps from the Mindjet Files window:

1. In the Files list, select the map(s) that you want to check out.
2. On the ribbon, click **Check Out**.

   If you have checked out the map on a different device you are notified, and offered two options:

   | Open the map read-only. | OR | Transfer the check-out to this device. To continue with the checkout choose this option. The changes you made on the other device since the last check-out will be lost, and the map will be checked out from this device. |

3. Each map is shown as checked out by you in Files list with an icon ✓ and in the Properties pane with a notation.
4. Select the map(s) in the Files list, and then click **Open** on the ribbon, or double-click a map name to open it for editing.
5. While you have a map checked out, you can continue editing it whether you are working online (connected to Mindjet) or **offline**.
6. Edit the map and save it or close it. Then, follow the instructions below to check in the map and save your changes online in Mindjet Files. If you don't want to save your changes, you can discard the checkout.

   **Read Note**

   **Do not use the Save As command to save the map to a different location.** MindManager will not be able to locate the edited map when you want to check it back in.

**Check in a map**

Once you’ve finished editing a map, you need to check it in to save your changes online to Mindjet Files, and unlock it so that others can edit it. If you have been working offline, you must **re-connect** to Mindjet to check in your map.

1. In the Mindjet Files window Files list, select the checked-out map(s) you want to check in.
2. On the ribbon, click **Check In**.
3. **Optional.** In the Check In dialog, you can select **Create a version before checking in** and enter a note for the version(s). This "sets aside" the existing working copy of the map as a version, and the map you check in becomes the new working copy.

   **Read Note**
Your ability to create versions depends on your Access level in the account. You are not required to create a version when you check in a map. For more information on version control, and why you might want to use it, see Use versions in Mindjet Files.

4. In the Check In dialog, click Check In.
Each map is checked in - your changes are saved online and the lock is removed. Other users can now edit the map.

Discard a checkout
Sometimes you check out a map, then change your mind about editing it, or you want to discard the edits you made. Since you do not want to save your changes, you do not need to check it in. You can simply discard the check out.
To discard a check out:
1. In the Mindjet Files window Files list, select the checked-out map whose check out you want to discard.
2. On the ribbon, click Discard Checkout.
The map is unlocked and available for editing.

Open maps from Mindjet Files in read-only mode
When you want to view a map but ensure that you don't inadvertently make changes, you can open a map in read-only mode. In this mode you can see live changes to a map without the danger of making any changes yourself. Opening the map in this mode still allows other users to check out or co-edit the map.
You can open maps in read-only mode in one of the following ways in the Mindjet Files window:
• In the Files list select the map(s) you want to open. On the ribbon click the Open button's arrow, and then click Open as Read-Only.
• Right-click the map name and then click Open as Read-Only.
The map status indicator at upper-left shows when you have the map opened in this mode:

If you already have a map open for co-editing (not checked out), you can switch to read-only mode at any time:
• Right-click the map's workbook tab, and then click Open as Read-Only.
• To switch back to editing mode, right-click the map's workbook tab, and then click Open for Edit.

Change access to a map in Mindjet Files
When a map is shared with users, those users are assigned an Access level for the map that determines whether they can edit or only view it. You can change the Access levels for users in the File Access list.
Your role in the account and your access rights for items within the account determine your ability to use certain online features in MindManager. If performing an action is not permitted, the command will be disabled. (For complete information about the different permission levels, see Understand access rights.)

1. In the Mindjet Files window Files list, select the map that you want to change the Access levels for.
2. The File Access list at lower right lists all account users who currently have access to the map.
3. Right-click the name of the user whose Access level you want to change.
   File Access level options will vary depending upon the type of user, and (if the map is in a folder) their Folder Access. For more information, see Understand access rights.
4. Select the Access level you want for this user:
   - **Read-Only** allows a user to open and view the map. With this level of access, the user cannot delete, edit, download, or check out the map, and they cannot share it.
   - **Edit** allows a user to delete, edit, download, and check out the map. Members with this Access level can share the map with others.
   - **Unshare** revokes the user’s access to the map. They can no longer view or edit the map.

**Mark maps as Favorites**

Do one of the following:

- Click in the Favorite column next to the file name.
- Select the file name(s) in the Files list, and then on the ribbon click Favorite.

**Rename a map**

1. In the Mindjet Files window Files list, right-click the map name and then in the shortcut menu, click Rename.
   The filename becomes an entry field.
2. Type the new name and press ENTER.

**Move or copy maps**

You can move or copy one or more maps to a different folder within an account. You cannot move or copy maps to a different account.

**Read Note**
You cannot move a map that is **checked out**.

To move or copy maps:

1. In the Mindjet Files window, select the map(s) in the Files list.
2. Drag the maps(s) to the new folder (hold the CTRL key to copy). If you select a folder as the destination, you must have **Edit access** to that folder.

The map appears in its new location. If you don’t see the map appear after a few moments, click **Refresh** on the ribbon.

### Delete maps

Deleting a map moves it to the account's Trash, and users will no longer have access to it. If you have created versions of the map using the **Version** feature, all versions of the map are also moved to the Trash.

Owners and Administrators can undelete maps from the trash, or permanently delete them.

⚠️ **Read Note**

You cannot delete a map that is **checked out**.

1. Select the map(s) to delete.
2. On the Mindjet Files window ribbon, click the **Delete** pull-down, then click **Delete File**.

**Read Hint**

Right-click the map name in the Files list, and then click **Delete** in the shortcut menu.

3. Click **Yes** to confirm the deletion, or **No** to retain the map.

### Undelete or permanently delete maps (Owners and Administrators only)

1. On the ribbon, click the **Delete** pull-down menu, and select **Show Deleted Items**.
2. Deleted items will appear in the Files list with a trash icon 🗑. 
3. Select the map(s) you want to undelete.
4. Click the **Delete** pull-down, and then click **Undelete File**. (If the map's folder was also deleted, you must undelete the folder as well to make the map accessible to other users.)

**Read Hint**

Right-click the map name in the Files list, and then click **Undelete** in the shortcut menu.

When a map us undeleted, is no longer shared. The map must be **shared** again to make it accessible to other users.

Use these same steps to permanently delete maps, except select **Permanently Delete File** in step 4.

Once a map is permanently deleted, it cannot be recovered.

To hide the deleted items again:

- On the ribbon, click the **Delete** pull-down, and de-select **Show Deleted Items**.
Work with Mindjet Files & Tasks

**Download copies of maps from Mindjet Files**

If you want to make local copies of maps that are stored online in Mindjet Files, you can download them.
(If you wish to edit a map from Mindjet Files offline, use the Check Out feature.)

To download a copy of a map:

1. In the Mindjet Files window Files list, select the map to be downloaded.
2. On the ribbon, click Download.
3. In the dialog, select the location for the downloaded map(s), and then click Save.

MindManager saves the map(s) to the location you specified, and each local copy opens in MindManager.

**Use files online in Mindjet Files**

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

To add files to Mindjet Files online, you can upload files, such as Microsoft Office documents, text files, image files and HTML files, or save them into your account from MindManager for Windows.

When you upload or save a file to Mindjet Files it is displayed in the Files list in the Mindjet Files window with all the files you currently have access to.

**READ NOTE**

MindManager for Windows does not display Projects created with Mindjet ProjectDirector. Content that resides within a Project cannot be accessed in the Mindjet Files window of MindManager for Windows.

Only content that does not reside within a Project (visible in ProjectDirector's Library view) can be accessed in the Mindjet Files window of MindManager for Windows.

When you want to edit a file, you must check it out, edit it, then check it back in. When you check out a file, it is downloaded to your local system. The original file remains online in Mindjet Files, effectively “locked” for other users: they cannot edit it, though they can open a read-only copy. When you are finished editing the file, you must save it, then check it in before others can view the revised file or edit it themselves.

What do you want to do?

- Upload a file to Mindjet Files
- Save a map as a different file type in Mindjet Files
- Search for a file in Mindjet Files
- Open files for viewing from Mindjet Files
- Check out files for editing from Mindjet Files
- Change access to a file in Mindjet Files
- Manage files in Mindjet Files
- Download copies of files from Mindjet Files

See also:
- Share maps, files, and folders in Mindjet Files
- Use versions in Mindjet Files
You can upload, edit, manage, and share your files with other users using commands on the Mindjet Files window ribbon, and in the right-click shortcut menus.

⚠️ **READ NOTE**

Your role in the account and your access rights for items within the account determine your ability to use certain online features in MindManager. If performing an action is not permitted, the command will be disabled. (For complete information about the different permission levels, see [Understand access rights](#).)

---

### Upload a file to Mindjet Files

You can upload files stored on your computer to Mindjet Files. Once uploaded, the documents are stored online in Mindjet's cloud.

✅ **READ HINT**

You can upload maps using the same steps.

To upload one or more files:

1. In the Mindjet Files window Files list, select the account or folder into which you want to upload a file. You must have Edit permission for the account or folder you choose.
2. On the ribbon, click **Upload**.
3. In the dialog, select the file(s) you want to upload, and click **Upload**.

✅ **READ HINT**

Select one or more files in your system’s File Explorer, and drag them into the Files list.

The uploaded file appears in the location you selected. Initially, when a file is uploaded it is only accessible by the user who uploaded it, and by the account’s Owner and Administrator(s). You can give other users access to it by sharing it with them.

⚠️ **READ NOTE**

If you upload a file that has the same name as an existing file in that location, you will be warned, and you can choose to overwrite the file, or upload the new file with a different name. If you choose to overwrite the file, you can create a version to "set aside" the existing file, and it will then be replaced with the new file. If you have the file checked out, your checked-out copy will be replaced with the new file, but the original online version will remain unchanged until you check it in.

---

### Save a map as a different file type in Mindjet Files

You can save a map in a different format directly to Mindjet Files online.

1. Open the map you want to save.
2. On the main MindManager window ribbon, click File, and then click Save as.
3. In the dialog,
4. In the Save As dialog, click Save in Mindjet Files.
5. In the dialog select the account (and folder) where you want to save the file.
6. In the Save As list, choose the format for the file, and then click Save.

You can save a map in any of the formats supported by the Share command, with the exception of Pack & Go (zip archive) or web pages.

⚠️ READ NOTE

If you save a file with the same name as an existing file in that location, you will be warned, and you can choose to overwrite the file, or save the new file with a different name. If you choose to overwrite the file, you can create a version to "set aside" the existing file, and it will then be replaced with the new file. If you have the file checked out, your checked-out copy will be replaced with the new file, but the original online version will remain unchanged until you check it in.

Search for a file in Mindjet Files

MindManager desktop can search Mindjet Files online for text in a file name, or within a file, across all files and folders within an account. Searches are specific to an account: if you want to search for the same text in more than one account, you must conduct separate searches in each account.

To search for a specific filename or text string:

1. At the top of the Mindjet Files window, enter the text in the Find field.
2. Click 🔍 to select the account you want to search.
3. The main MindManager window opens, displaying the Search Task pane with your search results. For maps, this pane will list all occurrences of the search term. Click a file name to open it and see the matching text

See Search for maps or documents for more information on using the Search feature.

Open files for viewing from Mindjet Files

When you want to view a file that is online in Mindjet Files, you open it from the Mindjet Files window or the main MindManager window. You can open a file without checking it out. Checking out a file is only required for editing.

To open files for viewing from the Mindjet Files window:

1. Select the file(s) to open from the Files list.
2. On the ribbon, click Open.

✔️ READ HINT

Double-click a file name in the Files list, or right-click and then click Open to open the file for viewing.
3. In the dialog, click **Open** to open the file(s) for viewing. (Checking out a file is only required for editing.)

4. Each file opens in its associated application as a Read-Only file.

To open a file from the main MindManager window:

1. Click **File > Open** and then click the **Open from Mindjet Files** button.
2. Select the file(s) you want to open, then double-click them or click **Open**.
3. In the dialog, click **Open** to open the file(s) for viewing. (Checking out a file is only required for editing.)
4. Each file opens in its associated application as a Read-Only file.

---

**Check out files for editing from Mindjet Files**

In order to edit a file that is online in Mindjet Files, you must check it out. When you check out a file, you effectively lock it: other users cannot edit it, though they can open a read-only copy. Other users also cannot delete or move a file that is checked out.

When you are finished editing the file, you must check it back in so that others can view the revised file or edit it themselves.

⚠ **Read Note**

You cannot check out a file that is already checked out by another user (indicated by 🏛️ in the Files list). While waiting for the file to be checked back in, you can open a read-only copy.

To check out files from the Mindjet Files window:

1. In the Files list, select the file(s) that you want to check out.
2. On the ribbon, click **Check Out**.
   
   If you have checked out the file on a different device you are notified, and offered two options:

   | Open the file read-only. Choose this option to open the file for viewing. | OR | Transfer the check-out to this device. The changes you made on the other device since the last check-out will be lost, and the file will be checked out from this device. |

3. Each file is shown as checked out by you in Files list with an icon 🏛️, and in the Properties pane with a notation.
4. Select the file name(s) and then click **Open** on the ribbon, or double-click the file name to open it for editing.
5. Each file opens in its associated application so you can edit it. You can continue editing the file whether you are working online (connected to Mindjet) or offline.
6. When you are done editing, save the file and close the application. Then, follow the instructions below to check in the file and save your changes online. If you don't want to save your changes, you can discard the checkout.
**Do not use the Save As command to save the file to a different location.** MindManager will not be able to locate the edited file when you want to check it back in.

To check out files from the main MindManager window:

1. Click **File > Open** and then click the **Open from Mindjet Files** button.
2. Select the file(s) you want to open, then double-click or click **Open**.
3. In the dialog, click **Check Out & Open** to check out the file(s) for editing.
4. Each file opens in its associated application so you can edit it. You can continue editing the file(s) whether you are working online (connected to Mindjet) or offline.
5. When you are done editing, save the file and close the application. Then, follow the instructions below to check in the file and save your changes online. If you don't want to save your changes, you can discard the checkout.

**Read Note**

Do not use the Save As command to save the file to a different location. MindManager will not be able to locate the edited file when you want to check it back in.

**Check in files**

Once you've finished editing a file, you need to check it in to save your changes online, and unlock it so that others can edit it. If you have been working offline, you must re-connect to Mindjet to check in the file.

1. In the Mindjet Files window Files list, select the checked-out file(s) you want to check in.
2. On the ribbon, click **Check In**.
3. Optional: In the Check In dialog, you can select **Create a version before checking in** and enter a note for the version(s). This "sets aside" the existing working copy of the file as a version, and the file you check in becomes the new working copy.

**Read Note**

Your ability to create versions depends on your account type and Access level. You are not required to create a version when you check in a file. For more information on version control, and why you might want to use it, see [Use versions in Mindjet Files](#).

4. In the Check In dialog, click **Check In**.

Each file is shown as checked in and the lock is removed.

**Discard a checkout**

Sometimes you check out a file, then change your mind about editing it, or you want to discard the edits you made. Since you do not want to save your changes, you do not need to check it in. You can simply discard the check out.

To discard a check out:
1. In the Mindjet Files window Files list, select the checked-out file whose check out you want to discard.
2. On the Mindjet Files window ribbon, click **Discard Checkout**.

The file is unlocked and available for editing.

*Change access to a file in Mindjet Files*

When a file is shared with users, those users are assigned an Access level for the file that determines whether they can edit or only view it. You can change the Access levels for users in the **File Access list**.

**READ NOTE**

Your role in the account and your own access rights determine your ability to change Access levels for other users. If performing an action is not permitted, the command will be disabled. (For more about the different permission levels, see **Understand access rights**.)

1. In the Mindjet Files window Files list, select the file that you want to change the Access levels for.
2. The File Access list at lower-right shows all account users who currently have access to the file.
3. Right-click the name of the user whose Access level you want to change.
   
   File Access level options will vary depending upon the type of user, and (if the map is in a folder) their Folder Access. For more information, see **Understand access rights**.

4. Select the Access level you want for this user:
   
   - **Read-Only** allows a user to open and view the file. With this level of access, the user cannot delete, edit, download, or check out the file, and they cannot share it.
   - **Edit** allows a user to delete, edit, download, and check out the file. Members with this Access level can share the file with others.
   - **Unshare** revokes the user’s access to the file. They can no longer view or edit the file.

*Manage files in Mindjet Files*

In the Mindjet Files window, you can sort the list of files using the column headings.

*Mark files as Favorites*

Do **one** of the following:

- Click in the Favorite ★ column next to the file name.
- OR Select the file name(s) in the Files list, and then on the ribbon click **Favorite**.

*Rename a file*

1. In the Mindjet Files window Files list, select the file to rename, and then, in the shortcut menu, click **Rename**.

   The filename becomes an entry field.
2. Type the new name and press ENTER.

**Move or copy files to a new location**

You can move or copy files to a different folder within an account. You cannot move or copy files to a different account.

⚠️ **READ NOTE**

You cannot move a file that is checked out.

To move or copy files:

1. In the Mindjet Files window, select the file(s) in the Files list.
2. Drag the files(s) to the new destination (hold CTRL as you drag to copy). If you select a folder as the destination, you must have **Edit access** to that folder.

The file(s) appears in the new location. If you don’t see the file(s) appear after a few moments, click **Refresh** on the ribbon.

**Delete files**

Deleting a file moves it to the account’s Trash, and users will no longer have access to it. If you have created versions of the file using the **Version** feature, all versions of the file are also moved to the Trash.

Owners and Administrators can undelete files from the trash, or permanently delete them.

⚠️ **READ NOTE**

You cannot delete a file that is checked out.

1. In the Mindjet Files window’s Files list, select the file(s) to delete.
2. On the ribbon, click **Delete > Delete File**.
3. Click **Yes** to confirm the deletion, or **No** to retain the file.

**Undelete or permanently delete files (Owners and Administrators only)**

1. On the ribbon, click the **Delete** pull-down menu, and select **Show Deleted Items**.
2. Deleted items will appear in the Files list with a trash icon 🗑️.
3. Select the file(s) you want to undelete.
4. Click the **Delete** pull-down, and then click **Undelete File**. (If the file’s folder was also deleted, you must undelete the folder as well to make the file accessible to other users.)

✔️ **READ HINT**

Right-click the file name in the Files list, and then click **Undelete** in the shortcut menu.

Files that are undeleted are no longer shared. The file must be **shared** again to make it accessible to other users.

Use these same steps to permanently delete file(s), except select **Permanently Delete File** in step 4. Once a file is permanently deleted, it cannot be recovered.
To hide the deleted items again:

- On the ribbon, click the **Delete** pull-down, and de-select **Show Deleted Items**.

**Download copies of files from Mindjet Files**

If you want to make local copies of files stored online in Mindjet Files, you can download them. (If you wish to edit a file from Mindjet Files offline, use the **Check out** feature.)

To download copies of files:

1. In the Mindjet Files window Files list, select the file(s) to be downloaded.
2. On the ribbon, click **Download**.
3. In the dialog, select the location for the downloaded file(s), and then click **Save**.

MindManager saves the file(s) to the location you specified.

---

**Use versions in Mindjet Files**

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

Creating a version (or "versioning") is a way to freeze a file, and create a "backup" copy of it that is unaffected by subsequent editing. This lets you keep static copies of the document as it exists at different points in the edit cycle. If you cut something from the current version, you can go back to a previous version and find that content. If you need to jettison the current version, you can revert to the previous version.

**Version control and collaboration**

MindManager supports collaborative editing by allowing multiple users to edit a map or other file stored online in Mindjet's cloud. Versioning offers individual users a way to create a separate copy of the file that is stored online each time they make revisions and attach a comment to the file about the changes made to it.

The comments you attach to each version are critical. The clearer the comments, the more useful the versioning will be to you and to other users.

Versions you create a read-only, but you can save them locally for editing.

---

**What do you want to do?**

- See the list of versions
- Create a version
- View a previous version
- Revert to a previous version
- Delete a previous version

**See also:**

- Use maps online in Mindjet Files
- Use files online in Mindjet Files
How it works

You’ll be offered the option to create a version when you edit a map or file, but you can create a version at any time. For example:

1. You create a version of a map in your Files list, MyMap.mmap. It is automatically tagged as Version 1.0, and you add the comment: “This is the original file I created last week.”
2. Now, you have your working copy of MyMap.mmap in the Files list, and a “backup” version, MyMap.mmap 1.0 which you can see on the Versions tab.
3. Select MyMap.mmap in the Files list, open it, edit it, and save it.
4. You changed MyMap.mmap but this did not affect its revision, MyMap.mmap 1.0.

What if you don’t like the changes you made to MyMap.mmap? You can go back to MyMap.mmap, Version 1.0 by reverting the working copy to that version. This version becomes the current working copy that you can access from the Files list.

You can create many versions of a file, giving you many snapshots of the document at specific points in its evolution.

See the list of versions

Before you start creating versions of a file, you might want to see if the file already has versions. Versions are visible to all users with Edit access to a file.

To view a file’s Versions list:

1. In the Mindjet Files window Files list, select the file whose versions you want to show.
2. In the lower pane, click the Versions tab.

The Versions list displays:

- The version number (automatically assigned)
- The date and time when the version was created
- Who created the version
- Comments added by the version creator

Create a version

You can create a version of a map or file at any time, and when you check in maps or files you are offered this option.

To create a version:
1. In the Mindjet Files window Files list, select the file you want to version.

2. Do one of the following:
   
   | On the Mindjet Files ribbon, click **New Version**. | OR | In the Versions tab at the bottom of the window, click **New Version**. |

3. In the New Version dialog, enter a comment that will help you distinguish this version from the current working copy and other future versions.

4. Click **OK**.

You’ll see the new version appear in the Versions list. You can view this version, and you can revert the working copy to this version to edit it.

**View a previous version**

You can open Versions in read-only mode so you can quickly scan through them to find content, or identify which one you want to revert to.

To view a Version:

1. In Mindjet Files window Files list, select the file whose versions you want to view, and then click the **Versions** tab at the bottom of the window.

2. In the Versions list, select the version you want to view, and then click **View**.
   
   - If the version is a map, it opens in the MindManager mapping window. The map status indicator at upper-left shows that the map is Read-Only, and displays the version number.
   - If the version is not a map, it opens in read-only mode in its associated application.

**Create a link to a version**

If you want to refer to a previous version, you can create a link that you can paste into a map, document, or email message:

1. In Mindjet Files window Files list, select the file whose version you want to refer to, and then click the **Versions** tab at the bottom of the window.

2. In the Versions list, select the version you want to link to, and then click **Copy Link**.

You can paste the link into a map, document, or email message. When someone clicks the link the version will open in read-only mode for viewing.

**READ NOTE**

The user must have Edit access to the file to view the version.

**Download a copy of a version**

You can make a local copy of a version for your own use by downloading the version. The version becomes an independent file on your system with no connection to its source document online. You can edit the downloaded file.
1. In the Mindjet Files window Files list, select the file whose version you want to download, and then click the **Versions** tab at the bottom of the window.

2. In the Versions list, right-click the version you want to download, and then click **Download version**.

3. Select a location for the downloaded file, and then click **Save**.

The file is saved to the location you selected, and opens automatically. Maps open in MindManager desktop, other files open in their associated applications.

**Revert to a previous version**

To resurrect a previous version of the file and make it the current working copy, you revert to that version. Once you have reverted, you can edit the file. You cannot revert a file to a previous version if it is checked out (indicated by 🗝️ in the Files list).

⚠️ **Read Note**

Reverting to a previous version overwrites the current working copy. You can "set aside" the current working copy by **creating a version** of it, before reverting to the previous version.

1. In the Mindjet Files window Files list, select the file you want to revert.

2. (Optional) create a version of your **current working copy**.
   - In the Versions tab, click **New Version**.
   - In the New Version dialog, enter a comment to distinguish this version from the version you will revert to.
   - Click **OK**.

3. In the Versions tab versions list, select the version you want to use as your working copy. (Remember, you can View the versions if you aren't sure which one to revert to.)

4. Click **Revert**.

The version you reverted to is now the current working copy.

**Delete a previous version**

Deleting will remove the version permanently from the list of versions.

To delete a Version:

1. Select the file with the version you want to delete.

2. In the Versions list, select the version you wish to delete, and click **Delete**.

⚠️ **Read Note**

Once the version is deleted, it cannot be recovered.
Use folders online in Mindjet Files

NOTE: The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can organize maps and files into folders and sub-folders online in the Mindjet Files window. The Folders list in Mindjet Files window lists all accounts, projects, and folders to which you currently have access. You manage folders using commands in the Folders group on the ribbon, and in the right-click shortcut menus.

READ HINT

Project folders are represented using a Briefcase icon 📁. Folders and content that resides within a Project can be accessed in the Mindjet Files window of MindManager for Windows. You cannot create a Project folder in MindManager.

READ NOTE

Your role in the account and your own Access levels determine your ability to use certain online features of MindManager. If performing an action is not permitted, the command will be disabled. (For more about the different permission levels, see Understand Access rights.)

Create a new folder or sub-folder in Mindjet Files

1. In the Mindjet Files window Folders list, select the Account where you want to create a new folder, or select the folder where you want to create a new sub-folder.

2. On the ribbon, click New Folder.

   READ HINT

   Right-click an account or folder name and then in the shortcut menu, click Create Folder.

3. A folder with the name “New Folder” appears in the Accounts and Folders list.

4. Type a name for the new folder in the field and press ENTER.

Once you have created a folder, you can:

- Add maps and files to the folder
- Share the folder with other users.

READ NOTE

When you add members to a Project folder by sharing the contents with them, they are automatically added to the Project Task List.
The Folder Access pane below the Folders list displays the users who have access to the folder, their Access level for the folder, and their role in the account.

⚠️ READ NOTE

You cannot create a Project folder in MindManager.

Change access to a folder in Mindjet Files

When a folder is shared with users, those users are assigned an Access level that determines their rights to the folder, and their default rights to its content. You can change the folder Access levels for users in the Folder Access list.

⚠️ READ NOTE

Your role in the account, and your own Access levels determine your ability to change Access levels for other users. If performing an action is not permitted, the command will be disabled. (For more about the different permission levels, see Understand Access rights.)

1. In the Mindjet Files window Folders list, select the folder that you want to change the Access levels for.
2. The Folder Access list shows all account members who have currently access to the folder.
3. Right-click the name of the user whose Access level you want to change.
   Folder Access level options will vary depending upon the type of user. For more information, see Understand access rights.
4. Select the Access level you want for this user. The Access level you choose will apply to the folder, its sub-folders, and the maps and files they contain.*
   • **Read-Only** allows a user to open and view the folder and within it, the sub-folders and files that have been shared with them. With this level of access, the user cannot create sub-folders or add new content by creating new maps or uploading maps or files. They cannot delete or rename the folder, or share the folder, its sub-folders, or files with others.
   • **Edit** allows a user to open and view the folder, its sub-folders, and files. With this level of access the user can create sub-folders and add new content by creating new maps and uploading maps or files. They can delete or rename the folder or share the folder, its sub-folders, and files with others.
   ⚠️ READ NOTE

Guests cannot have Edit access to a folder. For more information see Account roles and Understand access rights.

• **Unshare** revokes the user's access to the folder and to its contents. They can no longer view the folder, or its sub-folders and files.
* Sub-folders and files within a folder automatically inherit the folder Access, but you can override this by setting the Access level for individual sub-folders, maps and files.

Open a folder or sub-folder from Mindjet Files

To open a folder:

- In the Mindjet Files window Folders list, click the folder name.

  **READ HINT**

Click next to an account or folder name to see its sub-folders.

Move a folder to a new location in Mindjet Files

You can move a folder to become a sub-folder of another folder, or a top-level folder in the account. You cannot move it to a different account.

**READ NOTE**

You cannot move top level Project folders in MindManager.

To move a folder:

1. Select the folder you want to move or copy in the Folders list.
2. Drag it to its new location.

   If you select another folder as the destination, you must have Edit access to that folder.

The folder appears in its new location. If you don’t see the folder appear after a few moments, click Refresh on the ribbon.

**READ NOTE**

When you move a sub-folder into or out of a Project folder, the moved folder retains the original permissions.

Rename a folder in Mindjet Files

1. In the Mindjet Files window Folders list, right-click the folder name, and then, in the shortcut menu, click Rename.
2. Enter the new folder name.

**READ NOTE**

When you rename a top level Project folder, the associated Project Task List will also be renamed.

Delete a folder in Mindjet Files

Deleting a folder moves it to the account's Trash, and users will no longer have access to it, or its content. If one of the folder’s files is checked out (indicated by ✔️ in the Files list), you cannot delete that folder until the file is checked back in.

Owners and Administrators can undelete folders from the Trash, or permanently delete them.
Work with Mindjet Files & Tasks

⚠️ Read Note

You cannot delete top level Project folders in MindManager.

1. In the Mindjet Files window Folders list, select the folder to be deleted.
2. On the ribbon, click **Delete > Delete Folder**.

✔️ Read Hint

Right-click the folder name, and then, in the shortcut menu, click **Delete**.

3. Click **Yes** to confirm the deletion, or **No** to keep the folder.

Undelete or permanently delete a folder (Owners and Administrators only)

1. On the ribbon, click the **Delete** pull-down menu, and select **Show Deleted Items**.
2. Deleted items will appear in the Folders list and the Files list with a trash icon 🗑.
3. In the Folders list, select the folder you want to undelete.
4. Click the **Delete** pull-down, and then click **Undelete Folder**. (The folder's files will also be undeleted.)

✔️ Read Hint

Right-click the folder name, and then, in the shortcut menu, click **Undelete**.

The folder and its content is undeleted, but they are no longer shared. The folder must be shared again to make it accessible to other users.

Use these same steps to permanently delete a folder, except select **Permanently Delete Folder** in step 4. Once the folder is permanently deleted, it cannot be recovered.

To hide the deleted items again:
- On the ribbon, click the **Delete** pull-down, and de-select **Show Deleted Items**.

Share maps, files, and folders in Mindjet Files

**Note:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

Sharing is a way to give other people access to content that is online in Mindjet Files. You can Share to give established users access to specific content, or to invite new users to join the account and access specific content. Owners and Administrators always have access to all the content in the account, but other users see only the content they created or that has been shared with them.

⚠️ Read Note

What do you want to do?

- Share content from Mindjet Files
- Create, paste or email a link to an item in Mindjet Files
- Understand access rights for Mindjet Files
- View a table of access rights

See also:
- Use maps online in Mindjet Files
- Use files online in Mindjet Files
- Use folders online in Mindjet Files

392
Your role in the account, and your own Access level determine your ability to share. If sharing or setting access rights is not permitted, the command will be disabled. (For more about the different permission levels, see Understand access rights.)

How it works

You select an item to share (file or folder), the people you want to share it with, and their Access level for the item.

What can you share?

You can share files and folders, and you can grant either Read-Only or Edit Access.

Who can you share with?

You can share content with:

- Other users already in your account.
- People from your Mindjet Contacts.
- People you invite “on-the-fly” by providing their email address

Established users automatically see the shared content in the account. Each new user you share with receives an email message inviting them to join the account, and a link to the content you are sharing with them. For more information see How do I start collaborating online?

Share content from Mindjet Files

Share content to give other people access to it. If the people you share with are not currently users of the account, they are invited to join it.

1. Do one of the following:

   In the Mindjet Files window, select a file or folder to share. OR Open a map that you want to share. (The map must first be saved online as a Mindjet File.)

2. On the ribbon click Share, then select Share in Mindjet Files.

   The Share dialog appears with a list of users that you can share with. This list includes current account users as well as your personal Contacts. You also have the option to share with new people.
3. Select the people in the list that you want to share the selected item with. If you share a folder, the people you invite will have access to all the folder's content.

4. If you don't see the person you want to share with in the list, click **Share With a New Person**, and provide their name and email address. You can do this multiple times. Each new person will be added to your account.

5. Use the pull-down to select an Access level (**Read-Only** or **Edit**) to assign users for this item. You will only see the levels that you can assign. You can change this later for individual users - for more information see [Change file access](#), [Change map access](#), or [Change folder access](#).

6. Click the **Add new people as** pull-down to choose the role for the new users you add as either Guest or Member. For more information see [Understand access rights](#). You can change a user's role at any time using the **Account Management** options.

7. Click **Share**.

8. If you are sharing with new people, the email message that will be sent to new users is displayed. You can customize this, if you wish, and then click **OK**.

9. The new people you have shared with will receive an email invitation to join the account, with a link to the shared content. They will see the shared content when they log in to Mindjet from any Mindjet application. For more information see [How do I start collaborating online?](#)

**READ NOTE**

Existing users in the account do not receive an email when you share new content with them. If you want to advise them of newly-shared items, you can send them an email with a link to the item (described in the next section).

---

**Create, paste, or email a link to an item in Mindjet Files**

When you want to refer to a file or folder in Mindjet Files you can create a link to it on the Clipboard, and then add it to a map, embed it in a document, or send it in an email message. The person who clicks the link must have access to the file or folder in the account in order to open it.

To create a link that you can paste into a map, an email, or another document:

1. In the Mindjet Files window, select the file or folder that you want the link to point to.

2. On the ribbon, click **Copy as Link**.

**READ HINT**

Right-click the file or folder name, and then click **Copy as Link** in the shortcut menu.

The link is copied to the Clipboard. You can paste this link at the location of your choice.

To paste the link into a map:

1. Right-click a topic on a map.

2. In the shortcut menu, point to **Paste**, and then click **Paste Link**.

The person who clicks this link must have access to the content it points to in order to view it.
Understand access rights for Mindjet Files

You select an Access level when you invite users to share a file or folder. Once you have given a user access to an item, you can change their Access level in the File Access or Folder Access list for the item.

Access levels guidelines

Your role in the account and your own Access level for an item determine whether you can grant or change another user's Access level for the item.

- **Owners** and **Administrators** can change the Access level on any item for any user, except another Administrator.
- **Members** with Edit access for an item can change the Access level for that item for other Members and Guests.
- **Guests** cannot change the Access level for an item for any other users.

Table of access rights

This table shows the functions you can perform in Mindjet Files based on your role and Access level. The File or Folder Access levels that allow each function are shown.

1. Members can perform these functions **within folders** provided they have Edit access to the parent folder.
2. Members can set access levels for maps, files, and folders they share with other Members or Guests; Owners or Administrators always have Edit access to the entire account.
Use Mindjet Contacts

NOTE: The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can create your own personal Mindjet Contacts list, to use as a resource when you want to invite new people to share files. When you share, the list of possible invitees includes your Mindjet Contacts in addition to the current account’s users.

You can use the Contacts view in the Mindjet ProjectDirector web app to add new contacts manually or import them from your Microsoft® Outlook®, Gmail™, Hotmail®, or Yahoo!® Mail address books. This view also allows you to find and view contact information for account users in any account that you belong to.

Manage your Mindjet contacts

1. On the Mindjet Files window ribbon, click Contacts.
2. When the browser opens, log in to Mindjet in the Mindjet ProjectDirector web app.
3. The Contacts view opens in the Mindjet ProjectDirector web app.

For more information on using contacts, see the Mindjet ProjectDirector web app Help.

Using Mindjet Tasks

Add Mindjet Task queries

NOTE: The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

MindManager lets you display map topics for online Mindjet Tasks that match specific task criteria by using a Mindjet Task query. You can create a query from the Advanced tab on the ribbon.
You define the criteria you want to use to filter the tasks. This information is stored in a Mindjet Task Query topic that is added to your map. Once you have defined the criteria, MindManager for Windows queries online Mindjet Tasks to find matching tasks. These results are displayed as subtopics, with a link connecting each results topic to its associated Mindjet Task online.

Archived tasks are not included in Task Query results.

The results topics feature two-way communication with their associated Mindjet Tasks, so you can edit the online Mindjet Tasks from your map, and the map topics always display the latest task information.

The Map Index task pane Elements list Business Topics group displays all the topics on your map that contain Mindjet Tasks queries and query results.

Create a Mindjet Task Query topic

1. On your map, select a topic. (The Mindjet Task Query topic will become a subtopic of this topic.)
2. On the ribbon's Task tab, click Mindjet Tasks, and in the pull-down click a pre-defined query or click Mindjet Task Query.
   
   If you are working offline, you will automatically reconnect to Mindjet; if you have logged out, you will be asked to log in.

3. Specify the filter criteria for the query. Hints

   (You can modify the criteria after the topic has been added to your map, if needed.)

4. Click OK to start the query.

The Mindjet Task Query topic appears on your map, displaying results subtopics that match the filter criteria. (You'll see a "Loading..." icon while MindManager for Windows runs the query.)
If your system can't connect to Mindjet (due to an interrupted connection) the query topic will display an icon showing that it is disconnected.

The results topics are synced to their associated Mindjet Task online, and updated whenever the tasks are updated or when the query topic is refreshed.

Each results topic has a link that connects it to its associated Mindjet Task online (shown as a browser icon, for example 🍼). You can click the link icon to view and edit the item in your Browser.

You can modify a Mindjet Task Query topic’s text, as well as the filter criteria used in the query, or disconnect it from Mindjet.

To use the Mindjet ProjectDirector web app to manage Mindjet Tasks in your browser, on the Task tab or Advanced tab, click Mindjet Tasks and then click Go to Mindjet Tasks.
Work with Mindjet Task queries

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can modify the filter criteria for Mindjet Task Query topics on your map, and see the new results when you refresh the topic. You can also edit the topic text, and add other subtopics (in addition to the results topics).

⚠️ READ NOTE

Archived tasks are not included in Task Query results.

Task queries are disabled in flowcharts.

Mindjet Task Query topics can be moved or copied just like other map topics. When moved or copied, the topic retains its functionality: its results topics remain linked to their associated Mindjet Tasks online, and they are refreshed when you refresh their parent topic.

For more information about modifying results topics, see [Work with linked Mindjet Task topics](#).

The Map Index task pane Elements list Business Topics group displays all the topics on your map that contain Mindjet Tasks queries and query results.
Edit Mindjet Task Query topics

Mindjet Task Query topics display the query type as the topic text. You can edit this text to reflect the filter you are using, for example to change "Tasks" to "High Priority Tasks".

Add other topics

You can add other topics at the same level as the query results topics, and these are not affected when the query is refreshed.

You can also add subtopics to a query results topic, and they will be retained when you refresh the query.

If the parent results topic is linked to a Mindjet Task online that no longer meets the query criteria, the topic will be moved (along with its subtopics) to the "Old Results" topic. This can happen when:

- the Mindjet Task no longer meets the filter criteria
- the Mindjet Task was deleted

You can control this behavior using this Online Access option.

Modify a Mindjet Task Query

You can change the filter criteria used by a Mindjet Task Query topic at any time, and the results topics will be updated immediately. Existing results that no longer meet the criteria will be placed under a topic called "Old Results".

Change filter properties

1. Click the Mindjet Task Query icon on the query topic.
2. Click Edit Query.
3. In the dialog change the filter criteria.
4. Click OK.

The query topic automatically refreshes, showing you the new set of Mindjet Tasks that match the filter criteria. Existing results that no longer match the criteria are moved to a topic called "Old Results". You can control this behavior using this Online Access option.

READ NOTE

If your system can't connect to Mindjet (due to an interrupted connection) the parent topic will display an icon showing that the topic is disconnected.

Refresh a Mindjet Task query

Mindjet Task queries automatically refresh when you open the map that contains them (if this option is enabled), and individual results topics automatically refresh whenever their task information is updated.
To refresh Mindjet Task queries at any time:

- To refresh a single query, click the Mindjet Task Query icon 
  on the query (parent) topic, and then click Refresh.
  
  Press F5.

- To refresh specific linked Mindjet Task queries or Mindjet Task topics on your map, select the topics, and then click Refresh Selected Mindjet Tasks in the Mindjet Tasks pull-down on the Task tab or the Advanced tab.

- To refresh all the Mindjet Task queries and all the linked Mindjet Task topics on your map, click Refresh All Mindjet Tasks in Map in the Mindjet Tasks pull-down on the Task tab or the Advanced tab.

Subtopics you have added to the results will be retained. If their parent is a results topic that no longer meets the query criteria, they will be moved with their parent to the "Old Results" topic.

While the results are being refreshed, the topic displays the "loading" icon.

**READ NOTE**

If your system can't connect to Mindjet (due to an interrupted connection) the parent topic will display an icon showing that the query topic is disconnected.

If you have used the MindManager Task Management options (in the Task Info pane) to designate any of your Mindjet Task topics as Roll-up tasks, they will not be synced with their Mindjet Tasks when the query is refreshed.

**Move or copy Mindjet Task Query and results topics**

You can move or copy the parent query topic freely without affecting its functionality.

If you move a results topic out of the query branch it retains its functionality as well: its properties are kept in sync, its link still connects to the corresponding Mindjet Task online, and bi-directional sync of task info is retained. But, when you refresh the original query topic, a new results topic is added to replace the one you moved. This can create duplicate items on your map.

**Disconnect a Mindjet Task Query topic**

- Click the topic's Mindjet Task Query icon , and then click Disconnect from Mindjet Tasks.

If you disconnect a Mindjet Task Query topic, the query definition is removed from the topic. The Mindjet Task Query topic icon is removed to indicate that it is now a normal map topic. Its existing results topics will remain linked to and stay in sync with their corresponding Mindjet Tasks online.

For more information on disconnecting the query results topics, see Work with linked Mindjet Task topics.
Create new Mindjet Tasks

**NOTE:** The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can send topics from your map to create new Mindjet Tasks online. The topics on your map become linked Mindjet Task topics that include a link to their corresponding Mindjet Tasks online.

**READ HINT**

Linked Mindjet Task topics feature two-way communication (syncing) with Mindjet Tasks online.

The Map Index task pane Elements list Business Topics group displays all the topics on your map that are linked to Mindjet Tasks.

### Send topics to create Mindjet Tasks

You can send any topic on your map to create a new Mindjet Task online. The topic you send can just have the task name (as the topic text) but can also contain Task Info. The following information is included in the new task:

<table>
<thead>
<tr>
<th>Map topic</th>
<th>Mindjet Task online</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topic text</td>
<td>Task name</td>
</tr>
<tr>
<td>Progress map marker</td>
<td>Progress *</td>
</tr>
<tr>
<td>Task Info Start Date</td>
<td>Start Date</td>
</tr>
<tr>
<td>Task Info Due Date</td>
<td>Due date</td>
</tr>
<tr>
<td>Task Info Resource**</td>
<td>Assigned to</td>
</tr>
</tbody>
</table>

* If the topic you send has no Progress icon, the Mindjet Task will be created and marked as started, and a 0% Progress icon is added to the topic.

**See these notes about assigning and editing resources for Mindjet Tasks.

You are automatically assigned as the task creator and a follower of the tasks you create.

To send a topic to create a new Mindjet Task online:
1. Select a topic.
2. On the Task tab, Send Tasks To group, click Mindjet Tasks.
3. In the dialog, choose whether to send only the selected topic(s), or to include subtopics. (Each topic becomes a Mindjet Task.)
4. You can assign the task you create to an existing task list, or create a new task list with this as the first task. If you choose "None", the task is just added to your personal task list without a Project assignment.
5. Click Send.

The topic on your map becomes a linked Mindjet Task topic. It includes a link to the new Mindjet Task you just created. When you update the Task Info on the topic, the changes are synced to the corresponding Mindjet Task online.

A topic that was sent to create a new Mindjet Task online becomes a linked Mindjet Task topic.

To use the Mindjet ProjectDirector web app to manage Mindjet Tasks in your browser, on the Task tab or Advanced tab click Mindjet Tasks and then click Go to Mindjet Tasks.

Work with linked Mindjet Task topics

What do you want to do?

- Edit linked Mindjet Task topics
- View and edit Mindjet Tasks in the Mindjet ProjectDirector web app
- Refresh linked Mindjet Task topics
- Disconnect a linked Mindjet Task topic

NOTE: The online features Mindjet Files and Mindjet Tasks are no longer offered to new customers. However, if you have a MindManager Plus, Mindjet for Business, or ProjectDirector account, you can turn them on using Options.

You can create topics on your map that are dynamically linked to their corresponding Mindjet Tasks online in two ways:
- By creating a Mindjet Task Query topic - each query results topic is linked to its corresponding Mindjet Task online.
- By sending a topic to create a new Mindjet Task - the task topic is linked to its corresponding Mindjet Task online.
Each linked Mindjet Task topics includes a link that connects it to its associated Mindjet Task online (shown as a browser icon, for example 🌐). You can click the link icon to view and edit the task in the browser in the Mindjet ProjectDirector web app, which offers full task and project management capabilities for your Mindjet Tasks online.

**Read Hint**

The *Map Index* task pane Elements list Business Topics group displays all the topics on your map that are linked to Mindjet Tasks.

**Edit linked Mindjet Task topics**

Linked Mindjet Task topics feature two-way communication (syncing) with Mindjet Tasks online. These topics display their editable task properties in the following ways:

<table>
<thead>
<tr>
<th>Mindjet Task online</th>
<th>Map topic</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task name</td>
<td>topic text</td>
</tr>
<tr>
<td>Progress</td>
<td>Progress map marker</td>
</tr>
<tr>
<td>Start Date</td>
<td>Task Info Start Date</td>
</tr>
<tr>
<td>Due date</td>
<td>Task Info Due Date</td>
</tr>
<tr>
<td>Assigned to</td>
<td>Task Info Resource*</td>
</tr>
</tbody>
</table>

*See these notes about assigning and editing resources for Mindjet Tasks.
If the task is included in a Mindjet Project online, the project task list name is displayed on the topic, but it cannot be edited. When you change this information on a linked Mindjet Task topic on your map, the associated Mindjet Task is immediately updated online.

Task states
The Mindjet Task icon on the linked task topic indicates its state:

- Connected - you are connected to Mindjet Tasks.
  
  If a task has been archived, this is indicated in the icon tooltip:

  ![Archived Task](image)

  Archived task topics cannot be edited.

- Offline - you are not connected to Mindjet Tasks, and you cannot edit any linked Mindjet Task topics.

- Deleted - the Mindjet Task has been deleted online, and you cannot edit this topic. If the topic is a Mindjet Task query result, and you refresh the query, this topic is moved to a sub-branch called "Old Results". This behavior is controlled by the Online Access options.

View and edit Mindjet Tasks in the Mindjet ProjectDirector web app

Each linked Mindjet Task topic has a link (shown as a browser icon, ![Browser Icon] for example) that connects it to its Mindjet Task online. You can click this icon to edit the task in the browser in the Mindjet ProjectDirector web app. Topics with additional links will display the MindManager link icon ![MindManager Icon].

1. Click the link icon ![Browser Icon] on the topic, or click the multiple links icon ![Multiple Links Icon] and then click the link to the task in the list of links.
2. The browser opens, and displays the task in Mindjet ProjectDirector. (You will be asked to log in if you are not already using your account in Mindjet ProjectDirector.)

Any updates you make to tasks using Mindjet ProjectDirector will be reflected immediately in map topics that are linked to them.

To use the Mindjet ProjectDirector web app to manage Mindjet Tasks in your browser at any time, on the Task tab or Advanced tab click Mindjet Tasks and then click Go to Mindjet Tasks.

Refresh linked Mindjet Task topics

Linked Mindjet Task topics automatically refresh when you open the map that contains them (if this option is enabled), and whenever their task information is changed.

To refresh linked Mindjet Task topics at any time:
To refresh a single topic, click the Mindjet Task icon \(\text{\textcopyright}\) on the topic, and then click \textbf{Refresh}.

Press F5.

To refresh specific linked Mindjet Task topics or \textbf{Mindjet Task queries} on your map, select the topics, and then click \textbf{Refresh Selected Mindjet Tasks} in the Mindjet Tasks pull-down on the \textbf{Task} tab or the \textbf{Advanced} tab.

To refresh all the linked Mindjet Task topics and all the \textbf{Mindjet Task queries} on your map, click \textbf{Refresh All Mindjet Tasks in Map} in the Mindjet Tasks pull-down on the \textbf{Task} tab or the \textbf{Advanced} tab.

While the topics are being refreshed, the topic displays the "loading" icon \(\text{\textcopyright}\).

\textbf{READ NOTE}

If your system can't connect to Mindjet (due to an interrupted connection) the topic will display an icon \(\text{\textcopyright}\) showing that the topic is disconnected from its Mindjet Task online.

\textit{Disconnect a linked Mindjet Task topic}

If you disconnect a linked Mindjet Task topic, it becomes a normal topic that is no longer synced with its associated Mindjet Task online. It retains its task info, and a link to the Mindjet Task online.

To disconnect a topic:

- Click the topic's Mindjet Task icon \(\text{\textcopyright}\), and then click \textbf{Disconnect from Mindjet Tasks}.

(You can also disconnect topics when you are offline \(\text{\textcopyright}\).)

The topic becomes a normal map topic. If the topic is a Mindjet Task query results topic, it will remain in the branch until you move or delete it. Refreshing the query will not remove the disconnected topic, and may result in an identical linked topic in the query results.
Customize MindManager

It's easy to customize MindManager to suit your work style—and your needs.

Manage Creative Resources

Manage markers

You can manage markers by right-clicking the marker to open the menu, or by opening the Markers list in the Map Index task pane, which displays the list of icons, tags, and other markers that you can use on the current map.

The markers list is pre-populated with groups of markers of a single type (Task info, icons, tags, font color, fill color). Some groups are default groups (they appear in every markers list) and may be empty in some lists. Markers within each group can be mutually exclusive (only one marker from this group can be used on a topic) or not (multiple markers from this group can be used on a topic). You can change this attribute for user-defined icon groups and for tag groups.

Unnamed icons in the General Icons group and other groups display "Marker name" in gray. These disappear from the list when they are no longer used on the map, and are not included in the legend. You can name them to keep them in the list. When named, the General Icons move into the Single Icons group.

Named markers remain in the markers list whether or not they are used on the map. You can modify their meaning and content, or remove them from the list (and legend) if they are not used.

<table>
<thead>
<tr>
<th>Group name</th>
<th>Default group?</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task Priorities</td>
<td>yes</td>
<td>The whole set or a subset of the standard Priority icons (1-9). Mutually exclusive.</td>
</tr>
<tr>

</tr>
<tr>
<td>General Icons</td>
<td>yes</td>
<td>Icons that are used on the map but have no meaning assigned (names are grayed). If you delete the marker on the map it is removed from the list. You must move these markers to another group to keep them in the list. They are not included in the legend. Not mutually exclusive.</td>
</tr>
<tr>
<td>Fill Colors</td>
<td>yes</td>
<td>A selection of fill colors, may be named or unnamed (unnamed colors disappear from the list if not used on the map and are not included in the legend). Mutually exclusive (one color per topic).</td>
</tr>
</tbody>
</table>
Font Colors: yes

A selection of font colors, may be named or unnamed (unnamed colors disappear from the list if not used on the map and are not included in the legend). Mutually exclusive (one color per topic).

**READ HINT**

The **Priority**, **Progress**, and **Resources** are default groups that work in conjunction with MindManager’s **Task info** and **Resource management** features. When you add a marker from one of these groups to a topic the corresponding task info is also added to the topic.

This list can be customized in the Map Index task pane Markers list to your specific needs. You can:

- add new markers to the list
- create new icon and tag groups
- move icons and tags between groups using drag and drop
- modify the group names, marker names, and colors used for fill and font color markers.
- copy a marker group to a different map

**READ HINT**

You can **save, apply, and manage** entire lists of markers in the Marker Lists Organizer.

---

**Open the Markers list in the Map Index task pane**

Do **one** of the following:

- Right-click a marker on a topic, and then click **Organize Markers**.
- On the **Home** or **Insert** tab, click **Icons** or **Tags**, and then click **Organize Markers**.
- On the **Status Bar**, click the **Task Panes** button, click **Index**, and then in the task pane click **Markers**.

You can add new markers to the marker list dynamically by using them on your map, or by defining them in the Markers list in the Map Index task pane.
Add a marker on-the fly

Markers are added to the list automatically when you use a new marker on your map (apply a new icon from the library, create a new tag, or use a new font color or fill color).

New markers are added to the Markers list as follows:

<table>
<thead>
<tr>
<th>Marker type</th>
<th>Marker group</th>
</tr>
</thead>
<tbody>
<tr>
<td>Priority icons</td>
<td>Priority</td>
</tr>
<tr>
<td>Progress icons</td>
<td>Progress</td>
</tr>
<tr>
<td>Fill color</td>
<td>Fill Colors</td>
</tr>
<tr>
<td>Font color</td>
<td>Font Colors</td>
</tr>
<tr>
<td>Icons (except priority and % complete)</td>
<td>General Icons</td>
</tr>
<tr>
<td>Tags</td>
<td>Single Tags</td>
</tr>
</tbody>
</table>

Add new icon, fill color, and font color markers dynamically

Icon, fill color and font color markers are added to the list in a dynamic state (indicated by the gray label "Marker name"), and remain dynamic until you name them. If you remove all occurrences of an unnamed marker from the map, the marker also disappears from the markers list. Unnamed markers are also omitted from the legend.

You can manage these in the Markers list of the Map Index pane.

- To make General icons permanent entries, drag them to a marker group (new or existing). You will be prompted to name the icons (assign a meaning) when you move them.
- To make unnamed markers in other groups permanent, name them (right-click and then click Rename).
- To add markers to a new group, create the group first in the Markers list, and then drag the markers to the new group.

Add new tags and groups dynamically

You can add both tag groups and individual tags dynamically.

1. Select a topic.
2. On the Home or Insert tab, in the Markers group, click the Tags arrow.
3. Do one of the following:
4. Enter the name of the tag (for example <15 grams).
5. Click the **Color** button to select a color for the tag or select **None**.
6. Click **Add**.
7. You'll see the new tag added to the topic, and it will also appear in the Markers list in the Map Index task pane.
8. Repeat these steps to add more tags.
9. Click **Close** when you are finished.

**READ HINT**

You can also add new resource tags by using the **Resources** command in the Tasks group.

**Edit tags and tag groups dynamically**

You can edit both tag groups and individual tags dynamically.

**Edit the tag name**

1. On a tagged topic, right-click on the tag name.
2. In the menu, select **Edit Tag Name**.
3. The Map Index opens to the tag name field. Type in the new name.

**Edit the tag color**

1. On a tagged topic, right-click on the tag name.
2. In the menu, select **Edit Tag Color**
3. The **Marker Properties** dialog opens. In the **Color** field, select the desire color.
4. Click **OK**.

**Edit the group name**

1. On a tagged topic, right-click on the tag group name.
2. In the menu, select the tag group name, then select **Edit Tag Group Name**.
3. The Map Index opens to the tag group name field. Type in the new name.

**Customize topic info**

You can also make global setting choices for task information, including font color, background color, or tag color, by modifying the default settings for topic info.

1. On a tagged topic, right-click any task info (date, duration, resources, tags).
2. In the menu, select **Customize Topic Info**.
3. In the dialog, change the font color, background color, or tag color, or reset the colors to their default.
4. Click **OK**.

**READ HINT**

Changing the *default* settings for tags will override changes made when creating or editing the individual topics.

**Add a marker in the Map Index task pane**

**Add new icons or tags**

1. In the **Markers** list in the **Map Index** task pane, right-click the group name, and then click **New marker** (where *marker* is the name of the type of marker you are adding).
2. Enter the new marker's name. For icons, choose from the selection shown.
3. Click **Add**.
4. Repeat these steps to add more markers if desired. When you are finished click **Close**.

**READ HINT**

You do not need to use the marker on your map to add it to the list.

**Create a new marker group**

1. In the **Markers** list in the **Map Index** task pane, click `+`, then click **Add new icon group** or **Add new tag group**.
2. Enter the name for the new group.
3. Build up the group by one of these methods:
   - **Right-click** the group name and add a new marker to the group.
   - **Drag markers** from the another group into the new group. (You will need to name General icons when you move them.)

**READ NOTE**

You can't use the same icon in different groups.

4. **Optional** Right-click the group name and select **Mutually Exclusive** - this means you can add only one marker from this group to any topic.

**Modify a marker**

1. Right-click on the marker in the Markers list in the Map Index task pane.
2. Click **Modify**, **Rename**, or **Delete**.
3. Do **one** of the following:
Customize MindManager

Enter a new name for the marker. OR Select a new icon, fill color or font color for the marker.

☑️ READ HINT

Right-click any icon on the map and then click Edit Icon Name. Enter the new meaning for the icon in the Markers list.

To move a marker to a different group, drag it to the new group. You may not drag markers into mandatory groups (Task Priorities, Task Progress, Single Icons, General Icons, General Tags, Font Colors, Fill Colors).

Modify a marker group

You can modify the current markers list in the Markers list in the Map Index task pane. You can:

- Rename groups
  1. In the Markers list of the Map Index task pane, right-click the group name.
  2. Click Rename.
  3. Enter the new name for the group.

- Make markers within groups mutually exclusive
  1. In the Markers list of the Map Index task pane, right-click the marker group name.
  2. Click Mutually exclusive.

- Sort Icon and Tag groups
  1. In the Markers list of the Map Index task pane, right-click the group name.
  2. Click Sort A-Z or Sort Z-A.

The group will be sorted by marker name in ascending or descending alphanumeric order.

- You cannot sort the Priority or Progress groups.

- Delete markers or marker groups from the list
  1. In the Markers list of the Map Index task pane, right-click the group or marker name.
2. Click **Delete**.

   - You cannot delete any of the mandatory marker groups (Task Priorities, Task Progress, Resources, Single Icons, General Icons, Single Tags, Fill colors, Font colors)

If you delete an icon or tag group but have used some of its markers on the map, the "orphaned" markers will be added to the General icons or Single tags groups.

**Copy a marker group to a different map**

If you want to use a marker group from your map on a different map, you can copy the group to the other map.

**READ HINT**

You can also copy and paste marker groups in templates.

1. In the Markers list in the Map Index task pane, right-click the marker group name, and then click **Copy**.
2. Switch to the target map, and in the Markers list in the Map Index task pane, click +, and then click **Paste marker group**.

Pasting a marker group will not change (overwrite, move, or rename) any of the map's existing markers. In the event of a conflict (for example, if the marker already exists, but in a different group) that marker will not be included in the pasted group. If a group of the same name already exists, markers from the pasted group will be added to the existing group.

**READ HINT**

You can **save and apply** entire lists of markers in the Marker Lists Organizer.

**Copy markers to the clipboard**

**Copy Index** lets you copy a list of all topics that use markers to the clipboard as text. You can then paste this information into an email, document, text file, spreadsheet, or a map to make it easier to view, organize, and share marker information.

1. In the Markers list in the Map Index task pane, click +, then click **Copy Index**.
2. Open the email, document, spreadsheet, or map where you want to copy the marker index.
3. Paste the clipboard contents into the new location.

Once you have the marker index information in the new file, you can edit as needed.
Use the Marker Lists Organizer

The Template Organizer **Marker Lists** tab shows a selection of existing map marker lists. Here you can browse through the lists and choose one to use on the current map. If you are working on a map, and you want to use the same set of markers on another map, you can save the current markers list for re-use. You can also duplicate, delete, or rename lists, add comments, and organize them into folders for easier reference.

Each map contains a marker list and begins with the default list from the template that is used to create the map.

**What do you want to do?**

- Choose a marker list for the current map
- Save the current markers list for re-use
- Manage map marker lists

**Choose a marker list for the current map**

1. On the **Design tab**, click the **Theme Organizer** pull-down, and then click **Marker Lists**. The Template Organizer's **Marker Lists** tab left side shows the map marker list names and their folders. The right side shows a preview of the selected list's contents.

2. Click the name of the list you want to use, and then click **Apply**. If you don't see a list with all the markers you want to use, choose the list that best meets your needs. You can customize it (add and remove markers, reorganize groups) in the Map Index pane Markers list, and save it for later re-use.

**In Linked Maps View, you can apply a new marker list to some or all of the maps. Select the maps, and on the **Linked Maps** tab, in the **Assign** group, click **Markers**. Then, select the marker list in the dialog and click **Apply**.**

**Save the current markers list for re-use**

You can save the current set of map markers in a markers list file `.mmms` that can be applied to other maps.

1. On the **Design tab**, click the **Theme Organizer** pull-down, and then click **Marker Lists**. The Template Organizer's **Marker Lists** tab left side shows the map marker list names and their folders. The right side shows a preview of the selected list's contents.

2. If you want to add the new markers list to a specific folder, select it in the folder listing, or use the **Folder commands** to create a new folder.

3. At the top of the tree listing, click **Add New Marker List**, and then click **From Current Map**.
You can save the map marker list in more than one folder, if desired.

**Manage lists**

**Rename a markers list**
You can rename or add a comment to any existing Markers list.

1. In the organizer, click on the list name.
2. Under **List commands**, click **Rename**.
3. Enter the new name for the list.

**Add or modify the comment for a list**

1. In the organizer, click on the list name.
2. Click **Modify**.
3. Enter your comment for the list (for example, its intended use, specific project, date created).

**Organize lists**

- The **Folder commands** let you add a **New** folder, **Delete** a folder or **Rename** a folder.

  **READ NOTE**

  If you delete a folder you will also delete all the marker lists it contains - all are deleted from disk.

- Drag and drop lists between folders to organize them.

- The Template command **Duplicate** creates a copy of the list (Copy of...) in case you want to add it to more than one folder, or modify it without changing the original.

- The Template command **Delete** removes the marker list from the Organizer and **deletes it from disk**.
Manage Library items

You can use the MindManager Library task pane to organize a variety of elements that you can add to your maps like images, shapes, etc., referred to generally as *items*. The panes' primary purpose is to help you keep these items organized. As a convenience, you can add any of these elements to your map directly from the task pane, but you can also add them in other ways. You can manage the Library content by adding or renaming folders and items, moving items, and modifying them. Some items have special item-specific commands.

<table>
<thead>
<tr>
<th>What do you want to do?</th>
</tr>
</thead>
<tbody>
<tr>
<td>View the Library pane</td>
</tr>
<tr>
<td>Add, remove, or rename a folder</td>
</tr>
<tr>
<td>Add new items to the Library from disk</td>
</tr>
<tr>
<td>Use, modify, and organize items</td>
</tr>
</tbody>
</table>

See also:
- Markers
- Images
- Format topics

View the Library pane

- On the **Status Bar**, click **Task Panes** ![Task Panes](image), and then click **Library**.

The Library has categories for all the following items:
- Icons
- Images
- Background Images
- Shapes

These categories are listed at the bottom of the Library pane. Items are stored in folders by theme (e.g. Buttons). When you click on a folder in the top section, previews of the items it contains are shown in the lower half of the pane.

The **Search** field appears at the top of the Library **Images** pane to let you locate images by their keywords. See **images** for more information on using the Search option. Information on editing keywords follows below.

**Add, remove or rename a folder**

1. Right-click on any folder.
2. Then, do one of the following:

Select **New Folder**, and enter the new folder's name.

![Read Hint]

You can add content to the folder by moving or copying elements from other folders or add an item from disk.

Or

Select **Delete** to remove the folder.

![Read Note]

The folder and its contents will be removed from the Library pane and from disk.

Or

Select **Rename** then enter the new name for the folder.

---

**Add new items from disk**

You can add items to any Library folder from files on disk:

1. Right-click on the folder in the Library task pane.
2. Click **Add item** (where item is the type of item you are adding).
   - Click **Add Image**, **Add Icon**, or **Add Shape** above the Library preview pane.
3. Navigate to the file you want to add and click **Open**.

The new item appears as the last item in the lower preview window (you may need to scroll down to see it).

---

**Use, modify, and organize items**

You can reorganize existing items using drag and drop, and by using commands in each item's menu. When you rest your pointer over a preview image in the lower pane you'll see an arrow for a pull-down menu. The commands are divided into groups:

**Add item commands**

The first command group lets you add the item to the map in one or more ways or remove it from the selected topic. You must select a topic to activate these commands.

**Modify item commands**

The **Open in** command allow you to open the item in the application associated with it on your system so you can edit it and save it (for example, in an image editor).

![Read Note]

To edit a item it must be associated with an application on your system. If this application can edit the file, you can modify it. If the application can only view the file, you cannot modify it.

1. **Optional** If you want to leave the original item unchanged, right-click and click **Duplicate**.
2. Right-click the item, then click **Open in**.
3. The application associated with the item type will start.
4. Edit the item and save it. (Note that some applications only allow viewing. If the associated application does not allow editing, you can drag the item from the Library to another application that does.)
5. The edited item will show in the Library when you click the folder containing it again, or right-click the Library background and click Refresh. (This refreshes the item preview.)

Organize items commands

**Copy** - Copies the item. You can paste it into another folder of the same item type (Right-click on the target folder, and then click **Paste**) or into another application.

**Duplicate** - Duplicates the item in the same folder so you can modify it without changing the original. The copy will appear as the last item in the folder.

**Delete** - Removes the item from the task pane, and from disk.

**Rename** - Lets you change the file name of the item.

Item type-specific commands

<table>
<thead>
<tr>
<th>Item type</th>
<th>Command</th>
<th>Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Icons</td>
<td>Shortcut key</td>
<td>Assign a shortcut key to the icon (you can choose from CTRL+1-9)</td>
</tr>
<tr>
<td>Images</td>
<td>Add to Favorites</td>
<td>Adds the image to the Favorites folder for quick access.</td>
</tr>
<tr>
<td></td>
<td>Edit keywords</td>
<td>Edit the keywords used by the Library pane's Search function.</td>
</tr>
<tr>
<td>Shapes</td>
<td>Edit content margins</td>
<td>Adjust the area used for text inside any shape.</td>
</tr>
</tbody>
</table>
Manage map parts

The Map Parts pane shows the current available selection of Map Parts. These include both static map parts (topic templates) and Smart Map Parts with dynamic content linked to an external source. The panes’ primary purpose is to help you keep these items organized. You can manage the Map Parts Pane content by adding or renaming folders and map parts, moving the parts, and modifying them. You can also create new map parts from topics on the map, or modify them to suit your needs.

<table>
<thead>
<tr>
<th>What do you want to do?</th>
</tr>
</thead>
<tbody>
<tr>
<td>View the Map Parts pane</td>
</tr>
<tr>
<td>Add, remove, or rename a folder</td>
</tr>
<tr>
<td>Add a new map part from disk</td>
</tr>
<tr>
<td>Use, modify, and organize map parts</td>
</tr>
</tbody>
</table>

See also:
- Use map parts

View the Map Parts pane

Do one of the following:

On the Status Bar, click Task Panes , then click Map Parts.

Or

On the Insert tab, in the Branch group, click Map Parts.

Add, remove, or rename a folder

1. Right-click on any folder.
2. Then, do one of the following:
   - Select New Folder, and enter the new folder’s name.
   - **Read Hint**
     You can add content to the folder by moving or copying elements from other folders or by adding an item from disk.
   - Or
   - Select Delete to remove the folder. The folder and its contents will be removed from the Map Parts pane and from disk.
   - Or
   - Select Rename then enter the new name for the folder.

Add a new map part from disk

You can add a Map Part to any Map Parts folder from a file on disk:

1. Right-click on the folder in the Map Parts task pane.
2. Click Add Map Part
3. Navigate to the file you want to add and click Open.
The new map part appears as the last item in the lower preview window (you may need to scroll down to see it).

✅ Read Hint

See Create or Modify a Map Part for information on creating static map parts.

Use, modify, and organize map parts

You can reorganize existing map parts in the Library using drag and drop, and by using commands in each part's pull-down menu.

When you rest your pointer over a preview image in the lower pane you'll see an arrow for the pull-down menu. The commands are divided into groups:

Add map part command

The first command lets you add the map part to the map as a new topic. You must select a topic to activate this command.

Modify map part command

The Modify command allow you to modify the map part's formatting and content within MindManager. You cannot change the code for Smart Map Parts in this way.

You can modify map parts using the same commands you use to edit a map. (You can even use this method to combine several static map parts into one part.)

When you are done, Save the map part using the Save command on the Quick Access Toolbar or in the File tab's menu. You can use the Save As command to change its name to create a new version of the part, but be sure to save the part in the same location as the original - this way it will automatically appear in the Map Parts pane.

To see the new preview of the edited map part, right-click the folder that contains it, then click Refresh.

Organize map parts commands

Copy - Copies the map part. You can paste it into another folder of the same map part type (Right-click on the target folder, and then click Paste.) or into another application.

Duplicate - Duplicates the map part in the same folder so you can modify it without changing the original. The copy will appear as the last map part in the folder

Delete - Removes the map part from the task pane, and from disk.

Rename - Lets you change the file name of the map part.

Add to Favorites - Copies the part to the Favorites folder for easy access.
Create and modify map templates

Map templates can help you get a jump-start on creating a new map, and help you standardize the content of maps that you create frequently. MindManager comes with a set of commonly-used templates that appear automatically whenever you start a new map from the File tab menu. You can modify any of these templates to better suit your needs, or create your own templates.

Create a Map Template

You can save any map you create as a Template.

1. Create a map with the content and formatting you want to use for the Template.
2. Click the File tab, click Save As and Save As again, click Save As Type, and then click MindManager Template (*.mmat; *.xmmat).
3. Navigate to the location where you want to save the file, enter the File name, and then click Save.
4. If this is a new template, you may see the Properties Summary page where you can enter comments and other information about the template. When you click OK, the template is saved.

Make a note of this location in case you want to add the Template to the New Map dialog (it will be shown whenever you create a new map), add it to the Organizer, or send it to another user.

Modify an existing map template

When you open an existing Map Template, it is displayed in Map View, where you can edit its content like any map.

- Click Open, and in the Files of Type list select MindManager Template.

  Navigate to the template you want to modify, and then click Open.

The template opens in Map View, were you can edit it like any other map. When you are done editing, save the template using the steps above.

You can also modify Map Templates and manage them from the Organizer.
Use the Map Templates Organizer

A Map Template is, basically, a map that contains some pre-defined content. Map templates can give you a jump-start on creating frequently-used maps and can provide consistency in content and structure.

MindManager comes with a set of Map Templates to help you create maps quickly. One special template, called New Blank Map, is used by default each time you create a new, blank map, or you can choose to begin a map with another template. See Create a new map for more information on creating a map from a template.

A subset of templates appears in the New Map dialog. To see the entire collection of templates, you use the Template Organizer.

Use the Organizer

You can view and manage your entire collection of Map Templates in the Template Organizer:

- On the Design tab, click the Theme Organizer pull-down, and then click Map Templates. Options

Collections and folders

The template list shows all the available collections and the templates they contain. To further organize your templates, you may create folders within the collections, and move templates between the folders.

To create a new folder:

1. On the Template Organizer Map Templates tab, click the collection where you want to add the folder.
2. Under Folder commands click New.

Enter the name for the new folder.

READ NOTE

Under Folder commands, the Delete and Rename commands in this group apply to entire folders. If you delete a folder, all the templates it contains will also be deleted.

To reorganize templates:

- Move templates by dragging to a new folder or collection.
- To modify, duplicate, delete or rename a template, click its name and then use the commands under Template commands.
The Template command **Delete** removes the template from the Organizer and *deletes it from disk*.

**Modify an existing template from the Organizer**

1. On the **Design** tab, click the **Theme Organizer** to open the Template Organizer.
2. On the Template Organizer **Map Templates** tab, click the template you want to modify. (The default template used for new maps is called New Blank Map.)

   **READ HINT**

   If you want to modify a copy of the template and keep the original, under **Template Commands**, click **Duplicate** to create a copy, then select the copy you just created.

3. Click **Modify**.
4. Make changes to the Map Template as desired, using the normal map editing commands.
5. Map Templates also contain their own theme settings for default formatting of topics and objects. When you use a Map Template as the basis for a new map, the theme of the new map comes from the template. You can **modify these settings** just as you would for any map.
6. To change the template’s description, click the **File** tab, click **Info**, and then click **Properties**. On the **Summary** tab, enter a description in the **Comments** field.
7. To save the modified template, on the **Quick Access Toolbar**, click **Save**.

   **READ HINT**

   Press **CTRL+S**.

**CREATE AND MODIFY MAP TEMPLATES**

See **Create and modify Map Templates** for how to modify a Map Template that does not appear in the Organizer.

**CREATE AND SAVE A NEW MAP TEMPLATE IN THE ORGANIZER**

- First, create a map with the content you want to include in the template.
- To include a description in the template, click the **File** tab, click **Info**, and then click **Properties**. On the **Summary** tab, enter a description in the **Comments** field.

**SAVE THE TEMPLATE IN THE ORGANIZER**

You can save a new template so that it automatically appears in the Organizer using commands there:

1. On the **Design** tab, click the **Theme Organizer**.
2. On the Organizer’s **Map Templates** tab click **Add New Map Template**, and then click **From Current Map**.
3. The template is automatically saved using the current map name. If you want to change this, under **Template Commands** click **Rename** and enter a new name.
To save a template in a different location, use the File tab's Save As command. If you use the Organizer to save the template it is automatically saved in the default template location and is also available again from the Organizer. Using the File tab commands lets you save the template file in a different location, but it does not add the template to the Organizer.

---

**Add a Map Template to the Organizer from a file (*.mmat)**

You can add a template to the organizer from a template file (*.mmat). This may be a file that you have received from a colleague, or a standard template that's been designed for use on all corporate maps, or just for a particular project. Adding it to the organizer makes it easier to locate and use.

1. On the Design tab, click the Theme Organizer.
2. On the Organizer's Map Templates tab, in the list of templates, click the folder where you want to add the new template.
3. Click Add New Map Template, and then click From Existing Template. Navigate to the template file in the dialog box, and then click Open.
4. Once the template is added to the list, you can rename it by clicking Rename under Template Commands.

---

You can use the Template Organizer to further manage your templates by grouping them into collections.
Use the Web Templates Organizer

The **Template Organizer's Web Templates** tab lets you organize your templates into folders, and add new templates to the list. It also lets you rename, delete, or modify existing templates. Note that the templates themselves are folders that contain all the files required to format the Web pages. Each Web template folder appears as a single entry in the template list, and uses a special template icon to identify it.

If you have modified the export settings for the current map, you can save these changes for re-use by creating a new Web template file.

### Save the current Web export settings in a new template

1. On the **Design** tab, click the Theme Organizer pull-down, and then click **Web Templates.** Options
2. Click **Add New Web Template,** then click **From Web Format of Current Map.**

The template will be created, using the name of the current map. You can **Rename** it if you desire.

### Add a Web template to the Organizer

If you receive a customized MindManager Web template from a third party or from another user (for example, a standard template used for your company's Web pages) you can add it to the Template Organizer.

1. On the **Design** tab, click the Theme Organizer pull-down, and then click **Web Templates.** Options
2. Click **Add New Web Template,** and then click **From Existing Web Template.**
3. Navigate to the template folder and click **OK.**

The template will be added to the Organizer's template list.

### Organize the templates list

If your template collection becomes large, you may want to organize the templates into parent folders.

- Use the **Folder** commands to create new folders, rename existing folders, or delete a folder.
  
  **READ NOTE**
  
  If you delete a folder, the folder and all the templates it contains will be deleted from disk.

- Drag and drop templates between folders to re-organize them.
Modify Web templates

Each template consists of a set of CSS style sheets, HTML templates and MindManager macros that can be modified by the advanced user or third-parties. If you are familiar with modifying these types of files you can edit them to fit your needs.

If you want to modify an existing template, it's a good idea to make a copy of it first and customize the new version.

Modify an existing template

1. On the Design tab, click the Theme Organizer pull-down, and then click Web Templates. Options
2. Select a template in the list, and then click Duplicate.
3. The template appears as "Copy of....", but you can Rename it.
4. Click Modify, then click Open Web Template Folder button to see the folder containing the files used by the template.

Since the export templates all use CSS (Cascading Style Sheet) technology, many of the features of an export (fonts, colors etc.) can be adjusted by CSS-savvy users simply by editing the CSS file(s) in the template (or the final generated output). Minor modifications can be made to the HTML template files without editing the macros.
Use the Map Themes Organizer

Map theme files (*.mmas files) contain settings for default formatting that you can re-use by applying them to other maps. This makes it easy to standardize the formatting of maps for your project, department, or company. MindManager comes with a good variety of themes. In addition, you can create a new map theme by saving the automatic theme settings from the current map to a file. You can modify an existing map theme directly.

✔️ READ HINT

You can create standard map themes and distribute them to other users to keep map formatting consistent. Users can add these themes to the New map dialog in their own copy of MindManager, and apply them to their own maps.

You can use the Template Organizer’s Map Theme tab to manage your map themes.

Use the Organizer

- On the Design tab, click the Theme Organizer pull-down, and then click Map Themes. Options

Collections and folders

The list shows all the available collections and the map themes they contain. You can add or remove entire collections from the Organizer using the Package folders option. To further organize your themes, you may create folders within the collections.

- Click the commands under Folder Commands to create a new folder, rename a folder, or delete a folder.

⚠️ READ NOTE

Delete and Rename apply to entire folders. If you delete a folder, all the templates it contains will also be deleted.

Reorganize map themes

- Move themes by dragging to a new folder or collection.
- To modify, duplicate, delete or rename a theme, select it in the list, and then use the Template Commands.

Manage map themes

- Right-click on the theme preview, then click Rename, Modify, or Delete.
• The Template command **Delete** removes the Theme from the Organizer and **deletes it from disk**.

⚠️ **READ NOTE**

You cannot Rename, Modify, or Delete the **map theme Default**.

---

**Create or add new map themes from the Organizer**

You can add map themes in the Organizer for re-use on other maps. You can add:

• A "blank" map theme that uses the system defaults and contains no additional formatting. This is a good way to start from scratch to create a new theme. You can go on to modify this theme and save it for re-use.

• A new map theme that uses the automatic theme settings of the current map. Use this option if you modified the current map theme and want to save it as a separate map theme for re-use on other maps.

• A theme from a theme file. This may be a file that you have received from a colleague, or a standard theme that's been designed for use on all corporate maps or just for a particular project. Adding it to the organizer makes it easier to locate and use.

**Add a new theme to the Organizer**

1. On the **Design** tab, click the **Theme Organizer** pull-down, and then click **Map Themes**.
2. Select a folder where you want to add the new theme. (You can always drag it to a different folder later.)
3. Click **Add New Map Theme**.
4. Then click on:
   • **New Blank Theme** to add a theme that uses the system defaults for all formatting.
   • **From Theme of Current Map** to save the theme settings from the current map as a discreet theme and add it to the organizer list.
   • **From Existing Theme** to add a theme from a file to the organizer. Choose the theme file from the dialog that appears.
5. Once the theme is added to the list, you can rename it by clicking **Rename** under **Template commands**.

✅ **READ HINT**

You can also create a theme from the current map without using the Organizer.

**Modify a map theme from the Organizer**

1. On the **Design** tab, click the **Theme Organizer** pull-down, and then click **Map Themes**.
2. In the **Template Organizer**, on the **Map Themes** tab, select the theme you want to edit.
3. If you want to keep the original theme you can modify a copy of it: select **Duplicate** and give the theme a new name.
4. Click **Modify**.
5. Use the **Map Theme** view to set the new automatic formatting options.

**READ HINT**

See [Modify an existing map theme](#) for information on how to modify a theme that does not appear in the Organizer.
Customize MindManager

Customize the ribbon

Minimize the ribbon

You can minimize the ribbon to maximize your work area. In the minimized state, the ribbon appears when you click on a tab, but disappears again when you click on the map. Do one of the following to minimize the ribbon:

- Click the Minimize ribbon arrow above the ribbon.
- Double-click a tab on the ribbon.
- Click the arrow at the end of the Quick Access Toolbar, and then click Minimize the Ribbon.
- Press CTRL+F1.

Customize ribbon tabs and groups

You can customize the ribbon to:
- Show or hide tabs
- Rename tabs, groups and commands
- Change the order of tabs, groups and commands
- Add or remove commands and groups
- Create new, custom groups
- Create new, custom tabs that contain default or custom groups

You cannot rename, re-order, remove or add any commands within default groups. The default commands appear in gray text.

To help you identify a custom tab or group and to distinguish from a default tab or group, the custom tabs and groups in the Customize the ribbon list have (Custom) after the name, but the word (Custom) does not appear in the ribbon.

Open the Customize window

Right-click any tab on the ribbon, and then click Customize the Ribbon.

To see groups and commands:
- Click next to the tab names in the Customize the Ribbon Tabs list to see their groups, and click next to a group name to see the commands it contains.

Show or hide tabs in the application

- In the Customize the Ribbon Tabs list, check the tabs you want to see, uncheck those you don't.

Change the order of tabs, groups and commands
**Select the tab, group or command in the Customize the Ribbon Tabs list and then use the arrow buttons to the right of the list to move it up or down.**

Commands in default groups (shown in gray) cannot be re-ordered. Only commands in custom groups can be re-ordered.

**Rename tabs, groups and commands**

- Select the item in the Tabs list and then click **Rename**.

Commands in default groups (shown in gray) cannot be renamed. Only commands in custom groups can be renamed.

**Create a custom group**

You can create a custom group with commands that can be re-ordered or renamed on a default tab or on a Custom tab.

1. In the Customize the Ribbon Tabs list, select the tab where you want to add the custom group.
2. Click **New Group** below the Tabs list.
   - New Group (Custom) appears in the tab's list of groups.
3. Click **Rename** to enter the name for your new group.
   - The notation (Custom) will not appear on the ribbon.
4. While the new group is still selected in the Customize the Ribbon Tabs list, on the left side of the dialog, use the **Choose commands from** pull-down menu to select the group of commands you want to use to populate the new group.
5. Select a command from the list, then click **Add**.
6. Repeat until you have populated the group.

You can re-order and rename commands in the new group.

**Create a custom tab**

1. In the Customize dialog, click **New Tab** below the Customize the Ribbon Tabs list.
   - New Tab (Custom) appears in the tab list. The new tab contains an empty group named New Group (Custom).
2. With the new tab selected, click **Rename** to enter the name for your new tab.
   - The notation (Custom) will not appear on the ribbon.
3. You can populate the tab with default groups or create custom groups.

**Add default groups to a tab**

1. With the tab selected in the Customize the Ribbon Tabs list, use the **Choose commands from** pulldown menu to select **Main Tabs**.
2. To see the groups on each tab, click ☐, then click ☐ on the group name to see its commands.
3. Select the group you want to add to the tab, and then click **Add**.
Remove a tab, group, or command

- In the Customize the Ribbon Tabs list, select the item you want to remove, and then click **Remove**.

You cannot remove the default tabs, but you can choose not to display them. You cannot remove commands from default groups.

Remove customizations

- At the bottom of the Customize the Ribbon Tabs list, click **Reset**.

Customize the Quick Access Toolbar and other interface items

You can customize the Quick Access toolbar by adding or removing commands and by changing its position. Adding commands give you 1-click access to frequently-used commands.

Add or remove commands

Click the arrow at the end of the Quick Access toolbar and select the commands that you want to add, clear those you want to remove.

If you don't see the command you want to add, click **More Commands** to see the **Customize Quick Access Toolbar** dialog.

1. Under **Choose commands from**, select **All Commands** or select a tab name to see only the commands on that tab.
2. Under **Commands**, select the command you want to add, then click **Add**.
3. To remove a command, select it in the list on the right and click **Remove**.
4. To return the toolbar to its original configuration click **Reset**.

**READ HINT**

To quickly add a command from the ribbon to the Quick Access toolbar: right-click the command on the ribbon, and then click **Add to Quick Access Toolbar**. You will only see this option for commands that can be added to the toolbar.

To quickly add a command from the File menu to the Quick Access toolbar: click the **File** tab, right-click on a command in the menu, and then click **Add to Quick Access Toolbar**. You will only see this option for commands that can be added to the toolbar.

Change the order of commands

Commands appear on the Quick Access toolbar in the order shown in the list. Use the arrows to the right of the list to change the order of the commands.
Change the Quick Access Toolbar position

Do one of the following:
- Click the arrow at the end of the Quick Access toolbar, then click **Show Below the ribbon**.
- OR
  - In the **Customize Quick Access Toolbar** dialog check **Show Below the ribbon** to change the toolbar's position.

Customize other interface items

**Status Bar**
You can choose which commands to show on the bottom Status Bar.
- Right-click on the Status Bar and check or uncheck commands as desired.

**Workbook tabs**
You can display workbook tabs at the top or bottom of the window and turn them off or on. Do one of the following:
- Right-click any workbook tab, then click **Workbook Tabs Placement** and choose the display option.
- Click the **File** tab, click **Options**, click **View**, and then choose the display options.

More options
Explore the **Options** for even more ways to customize MindManager.

Set options
There are a wide variety of options that control the behavior of MindManager desktop.
To see the Options dialog:
- Click the **File** tab, then click **Options**.

Add-ins and transformations

**Add-ins**
MindManager comes with a set of pre-installed add-ins that extend its functionality. These software modules add commands to the MindManager ribbon, and to the Microsoft Office applications ribbons (or menus). Additional add-ins may be provided by MindManager or third-party vendors.
MindManager commands that come from add-ins include:

**Features**
- Sort Topics
Browser
Analytic views
Brainstorming
Gantt Pro

Imports and exports
Save as Web Pages
MPX Import
Microsoft PowerPoint Export
Microsoft Project Import and Export
Microsoft Word Export and Import
Microsoft Excel
FreeMind Import
XMind Import
HTML5 Map Export
OPML Import and Export
Spreadsheet (CSV) Export

Map data and topic data
File Explorer
Microsoft Excel Linker and Excel Range
Microsoft Outlook Map Parts
Microsoft SharePoint Linker
Smart Map Parts
Database Linker

These features are automatically enabled when you install MindManager. You can see the list of installed add-ins, and disable or enable them in the MindManager Add-Ins options dialog.

Buttons added to Microsoft applications by the add-ins

In the Microsoft Office applications, the Send to MindManager Map commands come from add-ins and are automatically enabled when you install MindManager.

If you are experiencing difficulties using the Microsoft Office add-ins see Troubleshooting Office add-ins.
Transformations

Transformations enable the conversion of a map to a text-based format and vice-versa. Like Add-ins, transformations add commands to the MindManager interface and appear as an integrated part of the application.

You can choose Outlines - Plain Text to create a text outline of your map; Outlines - OPML to create an OPML (Outline Processor Markup Language) outline, an XML format for outlines, of your map; or Outlines - Web Page to create an HTML outline. Additional transformations may also be provided by MindManager and by third-party vendors.

You can enable or disable transformations in the MindManager Transformations options dialog.

Create and organize macros

Additional capabilities can be added to MindManager through the use of MindManager Macros. Macros differ from add-ins in that they are not separate applications: they are a set of commands that direct MindManager to perform certain actions. Macros, like add-ins can be provided by MindManager or third-party vendors, but they can also be created using the Macro Editor provided with MindManager.

To add, delete, and modify macros on the Advanced tab, click the Macro arrow, then click Organize Macros.

Use the Macro editor

- On the Advanced tab, click Macro, then click Macro Editor.

Note: The editor's built-in help may not function on systems using Windows 7 and later. A compatible copy of the Help file SBE6_000.chm, is installed in top level of the MindManager installation folder. Double-click this file to see the Macro Editor Help.
Reference

Use a Tablet PC or Touchscreen

Get started with Pen Mode

MindManager has a special Pen Mode for running on the Tablet PC. In the Pen Mode you can use pen gestures to create and edit your maps. When you are finished, you may choose to switch back to Mouse Mode and convert the ink text in your maps into regular text.

What do you want to do?

Pen Mode commands

The MindManager Pen Mode provides special commands for working with a pen.

- **Insert Sketch**, **Ink Color**, **Ink Highlight**, **Ink Width**, **Ink Eraser**, and **Ink Selection** commands in the **Tablet** tab.
- **Ink to Text** and **Pen Mode Help** commands on the **Tablet** tab.
- **Pen Mode** and **Mouse Mode** commands on the **Status Bar** at lower left.

Limitations

In Pen Mode some modes and actions are disabled:

- Outline View
- Linked Maps View
- Walk Through view
- Brainstorming
- Resizing topics
**Toggle between Pen Mode and Mouse Mode**

- On the **Status Bar** at lower left, click **Pen Mode** or tap **Mouse Mode**.

**READ HINT**

You can configure MindManager to automatically start in pen mode by enabling the MindManager Tablet PC option - **Use pen mode on startup**.

**Get Help using MindManager in Pen mode**

Tap the **Pen Mode Help** command on the **Tablet** tab, to see the Tablet Help pane with a quick reference for gestures, and links to tablet-specific help.

**Tablet-specific options**

There are a variety of options that control the behavior of MindManager in Pen Mode. To see these options click the **File** tab, click **Options**, and then click **Tablet PC**.

**Pen Mode gestures**

You can execute commands to **create** or **edit** topics and sketches on your map by drawing the following gestures.

**READ HINTS**

You should first select the objects (if any) that you want the gesture to act on.

- **Gestures can be drawn anywhere on the map.**
- **Gestures must start in white space** (not touching an object) but can be drawn over objects.
- **Draw them at least one inch big** to ensure proper recognition.

The MindManager Pen mode interface is "gesture ready". You do not need to push the pen button to signal that you are drawing a gesture.

Many of these are standard gestures defined by Microsoft and used by other tablet applications, while a few are specific to MindManager.

<table>
<thead>
<tr>
<th>Gesture</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="triangle.png" alt="Insert sketch" /></td>
<td>Insert sketch Draw the triangle in a single stroke, without lifting the pen. Make sure that the top of the triangle points upward.</td>
</tr>
<tr>
<td><img src="eraser.png" alt="Delete/Erase" /></td>
<td>Delete/Erase Make the strokes as horizontal as possible, and draw at least three strokes. If the height of the gesture increases, the number of back and forth strokes also needs to increase.</td>
</tr>
<tr>
<td>Focus on topic (left)</td>
<td>Draw both sides of the chevron with equal length. Make sure the angle is sharp and that the point is not rounded to a curve. Make the chevron big, approx. 3/4 inch. Right-handed people can use the chevron-right and vice versa.</td>
</tr>
<tr>
<td>Focus on topic (right)</td>
<td></td>
</tr>
<tr>
<td>Center map</td>
<td>Draw the circle in a single stroke, without lifting the pen. Start from the topmost point and end at the same spot.</td>
</tr>
<tr>
<td>Cut</td>
<td>Draw the curlicue at an angle, from lower left to upper right.</td>
</tr>
<tr>
<td>Cut</td>
<td>Draw this gesture in a single stroke starting with the left stroke. Draw the two strokes as close as possible, almost as one line.</td>
</tr>
<tr>
<td>Copy</td>
<td>Draw the double-curlicue at an angle, from the lower left to the upper right.</td>
</tr>
<tr>
<td>Copy</td>
<td>Draw this gesture in a single stroke starting with the right stroke. Draw the two strokes as close as possible, almost as one line.</td>
</tr>
<tr>
<td>Paste</td>
<td>Draw both sides of the caret with equal length. Make sure the angle is sharp and that the point is not rounded to a curve.</td>
</tr>
<tr>
<td>Paste</td>
<td>Draw the circles in a single stroke, without lifting the pen. Start drawing the circle from the topmost point.</td>
</tr>
<tr>
<td>Insert topic (right)</td>
<td>This gesture is a single, fast flick to the right.</td>
</tr>
<tr>
<td>Insert topic (left)</td>
<td>This gesture is a single, fast flick to the left.</td>
</tr>
<tr>
<td>Insert subtopic (right)</td>
<td>Draw this gesture as a single stroke, starting downward and then right.</td>
</tr>
<tr>
<td>Insert subtopic (left)</td>
<td>Draw this gesture as a single stroke, starting downward and then left.</td>
</tr>
<tr>
<td>Undo</td>
<td>Make sure to draw the semicircle from the right to the left. The two ends of the arc should be on the same horizontal line.</td>
</tr>
</tbody>
</table>
Redo | Make sure to draw the semicircle from the left to the right. The two ends of the arc should be on the same horizontal line.
---|---
Zoom in | This gesture is a single, fast flick upward.
Zoom out | This gesture is a single, fast flick downward.

**READ HINT**
If you have a Tablet PC or touchscreen computer running under Windows 7 or later, you can use additional touch gestures when working with MindManager maps.
Create a map in Pen mode

In Pen Mode, you can create a map by entering topics and topic notes as text or ink, and sketches that are free-floating or included in topics.

What do you want to do?

Enter topics

When you begin a new map in pen mode the central topic is blank. You can tap on it to enter the topic text. If MindManager can recognize the text it will be used as the default name for the map when you save it, otherwise you will be prompted for a map name.

You enter other topics using gestures, or you can tap the commands on the ribbon to add topics, relationships, and boundaries in the conventional way.

| Insert a new main topic | Select the Central topic and draw the left or right Insert Topic gesture - or -.
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert a sibling topic</td>
<td>Select a topic and draw the left or right Insert Topic gesture - or - in a space nearby.</td>
</tr>
<tr>
<td>(topic at the same level)</td>
<td></td>
</tr>
<tr>
<td>Insert a subtopic</td>
<td>Select a topic and draw the left or right Insert Subtopic gesture  or  in a space nearby.</td>
</tr>
<tr>
<td>(topic at the next level)</td>
<td></td>
</tr>
<tr>
<td>Insert a floating topic</td>
<td>With nothing selected, draw the left or right Insert Topic gesture - or -</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Insert a callout topic</td>
<td>Select a topic and on the Home tab, in the Add Topics group, tap Callout.</td>
</tr>
</tbody>
</table>

Enter ink topics

When you insert a topic or a subtopic the Ink entry box appears so you can use the pen tool to draw your text.

The commands in the Tablet tab let you select Ink Width and Ink Color. You can change these as you write, so the ink thickness and color can vary within the topic.

If you make a mistake while drawing the text, in the Tablet tab, tap the Ink Eraser tool to erase the ink. Then tap Ink Width to add more ink to the topic.
If you want to move or resize some text while entering, tap the Lasso selection button and draw a boundary around it. The selected text is displayed in outline characters, with a box around it. Drag the text to a new location or use the handles to resize it. Tap **Ink Width** to add more ink to the topic.

**Insert and edit topic notes**

The Ink Notes feature is designed to allow you to quickly add ink comments to a topic. The topic may or may not already contain some Text Notes.

**Open the Topic Notes window**

1. Select the topic.
2. Do **one** of the following:

   - If the topic already contains a note, tap the topic's Notes icon .
   - Or, on the **Insert** tab, in the **Topic Elements** group, tap **Notes**.
   - Or, press **CTRL+T** or **F11**.

The Ink and Text Notes are displayed separately in the Topic notes window, and by using the buttons on the top status bar you can switch between showing Text only, Ink only, or both Text and Ink at the same time.

**Enter Ink**

The Ink Notes window behaves the same as the ink sketch panel, but has its own set of controls. The Ink Notes window size is automatically adjusted to the content and can be extended at the bottom to grow.

Draw the ink using the **Ink Tool** or **Highlighter Tool**.

[READ HINT]

Turn off the Text Notes window to maximize the space available for ink notes.

- If you enter Ink close to the bottom of the window (about an inch), the page is automatically extended at the bottom, or you can use the **Extend Page** button in the Ink toolbar to extend the page.
- If you make a mistake use the **Eraser** to remove ink.
- To modify ink, use the **Selection Tool** to select ink. You can then resize it or drag it to a new location within the note.

[READ HINT]

The background of the ink notes window can be set in the Modify Theme mode, using the **Notes Format** command. (You must switch to Mouse Mode to use the Modify Theme command.)

**Include Ink Notes in Text Notes**
You can add items from the Ink Notes to the Text Note as text (the ink is converted to text by handwriting recognition) or as an image.

**Convert ink in notes to text**

If ink objects are dragged into the Text window, they are automatically converted to text and inserted at the drop position.

1. Select ink objects in the Ink Notes window (using the Selection Tool 🖋️ on the Ink Notes toolbar).
2. Drag and drop them into the Text view (both views must be shown).

The ink is then automatically converted into regular text (using handwriting recognition) and inserted at the drop position.

Alternatively, you can select the ink and tap **Append to Text Notes as Converted Text** 📒 on the Ink Notes toolbar. The ink is automatically converted into regular text (using handwriting recognition) and inserted at the end of the text note.

**READ HINT**

You can convert all the ink topics on your map to text topics using the **Ink to Text** converter.

**Add an ink note to a text note as an image**

You can include an Ink Note inside a Text Note as an image.

Select the ink and tap **Append to Text Notes as Image** 📒 on the Ink Notes toolbar. This command converts the selected ink object to a PNG image that is appended at the end of the Text Note. An additional space character is added after the image. You can then move the image to a different position inside the note.

**Ink Notes export**

Exports that include Notes will show the Ink Notes content as an image below the regular Text Notes. If you export your map to web pages or to a Word file, you have the option to exclude or include the notes in the export. For Word, this option appears in the Word Export Settings **General** tab.

Remove all ink objects from the Notes

Tap the **Clear** button on the Ink Notes toolbar.

**Insert sketches**

1. Do one of the following:
   - To add a free-floating sketch, draw the Insert sketch gesture 🔁.
   - Or to add a sketch inside a topic, select the topic and on the **Tablet** tab, in the **Ink** group, tap **Insert Sketch**.
2. The sketch pad appears. On the **Tablet** tab, in the **Ink Format** group you can choose to draw with the pen 🖊️ or the chisel-tip highlighter 🖋️. The current ink color displays under the pen.

- Tap the pen or highlighter to select a drawing tool.
- Tap the **Ink Color** arrow to choose a new color for the current pen or highlighter.
- On the **Format** tab, in the **Object Format** group, tap the **Fill Color** arrow to choose a different background color for the sketch. (The default color is set in the MindManager Tablet PC options).

**Read Hint**

You have the option to use a pressure-sensitive pen in your sketch.

If you make a mistake while you are drawing the sketch, you can tap the **Ink Eraser** tool 🖋️ on the **Tablet** tab to switch to the eraser. Tap **Ink Thickness** to resume drawing.

If you want to move or resize some sketch elements tap the Lasso selection button 📸 on the **Tablet** tab, in the **Ink Format** group, and draw a boundary around them. The selected element is displayed in outline, with a box around it. Drag the element to a new location or use the handles to resize it. Tap **Ink Width** to resume drawing.

**Read Hint**

You can drag and drop a sketch on a topic to attach the sketch inside the topic. A green topic cue will show the position of the sketch inside the topic.
## Edit a map in Pen Mode

Most pen gestures work on the currently selected object or objects. You'll also need to select topics and objects to format them or use other editing commands on them.

Pen Mode offers special editing commands for ink topics and sketches. These commands appear in a mini-toolbar on the topic or object and on the ribbon. You can drag any object to a new location, and use gestures to cut, copy, paste and delete topics.

### What do you want to do?

- **Select topics and objects**
- **Edit topic text or ink**
- **Edit a sketch**
- **Move, cut & paste, or delete topics and objects**
- **Convert ink topics to text**

---

### Select topics and objects

To select a single topic or object:
- Tap the object.

To select multiple **topics or objects**:

1. On the **Advanced** tab, in the **Edit Topics** group, tap the **Select** arrow, and then tap **Multiselection Mode**.
2. Tap and drag a rectangle that touches all the objects you want to select. To select or de-select additional objects, tap on the object.
3. To end Multiselection Mode, on the **Advanced** tab, in the **Edit Topics** group, tap the **Select** arrow, and then tap **Multiselection Mode**.

To deselect all objects:
- Tap on an empty place on the map

You can also use the **Power Select** command to select a set of topics based on their properties.

### Edit topic text or ink

In Pen Mode you can edit both ink topics and regular text topics.

#### Edit ink topics

1. Double-tap to begin editing. If you selected an ink topic, the Ink entry box will appear so you can add or edit ink.
2. Use the commands in the **Tablet** tab, **Ink** group or in the mini-toolbar to edit the ink.
• Select it using the **Ink Selector** then choose a new line thickness or color, resize or move it.
• Use the **Eraser** to remove ink.
• Use the **Undo** or **Redo** gestures to undo or redo your changes.

**Read Hint**

You can use the **Find** command to find ink text, but the Replace command is not available for ink.

**Edit text topics, relationships and boundaries**

You can also edit regular text topics, **relationships**, and **boundaries** in the normal way. Tap to select an object, (for example to re-shape a relationship) or double-tap to begin editing a text topic, or see the formatting options for other objects.

**Edit a sketch**

1. Double-tap on the sketch to begin editing.

   **Read Hint**

   You can edit a sketch in Mouse Mode, as well. Double-click on the sketch to edit it.

2. Add more ink, or modify the exiting sketch: Select ink using the **Ink Selector** then choose a new line thickness or color, move it, or resize it.
3. Use the **Ink Eraser** to remove ink.
4. To resize the entire sketch, select it and drag its corner handles.
5. Tap the **Format** tab, **Object Format** group, **Fill Color** arrow to choose a different background color for the sketch. (The default color is set in the Tablet PC options).

   Use the **Undo** or **Redo** gestures to undo or redo your changes.

**Move, cut & paste, or delete topics and objects**

The basic procedure for moving an object on a map is to select it (tap) and drag it to its new location. See **Reorganize topics** for information on moving topics.

You can also use the cut, copy, and paste gestures to rearrange or duplicate topics.

To delete an object, select the object(s) then draw the delete gesture nearby -.

**Convert ink topics to text**

You may want to convert the handwritten topics that you added in Pen Mode into text. One good reason to convert is that ink topics take more file space than text topics. Converting the handwriting to text will make your map smaller.
You can use the **Ink to Text** Converter in either **Pen Mode** or **Mouse Mode** to convert ink topics to text using handwriting recognition.

⚠️ **READ NOTE**

The **Ink to Text** converter does not act on topic Notes. You can convert these individually from ink note to text note.

Do one of the following:

- Right-click or tap and hold on a topic to see the context menu, then click or tap **Convert Ink to Text**, then **Ink to Text Converter**.
- On the **Tablet** tab, click **Ink to Text**.

The converter steps through each ink topic on the map. For each topic you have the following choices:

<table>
<thead>
<tr>
<th>Replace with</th>
<th>The menu shows up to five possible text choices. You can select one of these or enter your own text. This text replaces the ink when you select Accept.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accept all</td>
<td>Accepts the first suggestion for all ink topics on the map and replaces the handwriting with the new text.</td>
</tr>
<tr>
<td>Accept</td>
<td>Converts the ink to the current suggestion and moves on to the next ink topic.</td>
</tr>
<tr>
<td>Next</td>
<td>Moves to the next ink topic without converting the current topic.</td>
</tr>
<tr>
<td>Close</td>
<td>Stops the conversion process.</td>
</tr>
</tbody>
</table>

⚠️ **READ NOTE**

If converting ink to text does not work on your Tablet PC, be sure that you have the default input language set to **English** in your operating system Control Panel.
Use Windows touch gestures

If you have a Tablet PC or touchscreen computer running under Windows 7 or later, you can use gestures when working with MindManager maps.

Consult the Microsoft Windows Help for more information about which gestures are supported on your system.

You can choose which gestures you want MindManager to recognize for specific functions by setting these MindManager Options.

These standard gestures ▼ should be familiar to you if you normally use gestures on your computer.

<table>
<thead>
<tr>
<th>Mouse</th>
<th>Gesture</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Click</td>
<td>Tap</td>
<td>tap with one finger</td>
</tr>
<tr>
<td>Double-click</td>
<td>Double-tap</td>
<td>double-tap with one finger</td>
</tr>
<tr>
<td>Right-click</td>
<td>Press and tap</td>
<td>press on target and tap using second finger</td>
</tr>
<tr>
<td>Press and hold</td>
<td></td>
<td>press until blue ring fully appears, then release</td>
</tr>
<tr>
<td>Drag selection</td>
<td>Drag</td>
<td>drag object with one finger</td>
</tr>
<tr>
<td>Scroll</td>
<td>Pan with inertia</td>
<td>drag with one or two fingers</td>
</tr>
<tr>
<td>Zoom (CTRL+Scroll wheel)</td>
<td>Pinch, Spread</td>
<td>move 2 fingers together, move 2 fingers apart</td>
</tr>

<td>Flick</td>
<td>make a quick drag gesture in the direction you want to pan</td>
</tr>
<tr>
<td>- - -</td>
<td>Rotate</td>
<td>pivot with 2 separated fingers</td>
</tr>
</tbody>
</table>

Use gestures in MindManager

You can use gestures for these specific functions in MindManager:
<table>
<thead>
<tr>
<th>Function</th>
<th>Gesture</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select topic or object</td>
<td>Tap the topic or object</td>
</tr>
<tr>
<td><em>Tap, press and hold, and flick gestures are available on all touchscreens and Tablet PC’s.</em></td>
<td></td>
</tr>
<tr>
<td>Select multiple topics</td>
<td>On the map background, drag a rectangle that touches the topics</td>
</tr>
<tr>
<td>See shortcut menu</td>
<td>Press and tap or press and hold</td>
</tr>
<tr>
<td><em>Tap, press and hold, and flick gestures are available on all touchscreens and Tablet PC’s.</em></td>
<td></td>
</tr>
<tr>
<td>Scroll map</td>
<td>Drag on the map background</td>
</tr>
<tr>
<td>Move topic</td>
<td>Tap the topic to select it, or drag it to a new location, or just release</td>
</tr>
<tr>
<td>Expand / collapse topic</td>
<td>Tap to select the topic</td>
</tr>
<tr>
<td></td>
<td>Rotate right / left</td>
</tr>
<tr>
<td>Resize image</td>
<td>Tap to select the image</td>
</tr>
<tr>
<td><em>This function is disabled by default. You can enable it using the MindManager Options.</em></td>
<td>Pinch or spread</td>
</tr>
<tr>
<td>Zoom in / out</td>
<td>On the map background, pinch / spread to zoom out</td>
</tr>
<tr>
<td>Zoom or Fit Map</td>
<td>On the map background, tap with 2 fingers</td>
</tr>
<tr>
<td><em>You can choose which function applies to this gesture using the MindManager Options.</em></td>
<td></td>
</tr>
<tr>
<td>Switch to next / previous open map</td>
<td>Flick right / left</td>
</tr>
</tbody>
</table>
Keyboard shortcuts

To see a list of keyboard shortcuts at any time, on the ribbon's Help tab, in the Help group, click MindManager Help and select Keyboard Shortcuts from the drop down menu.
